WINDOW GLASS.

MONTREAL.

Orders for immediate shipment are very few. Prices have been so low on glass that one or two houses have refused to follow them. We qoute: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

There is practically nothing doing from stock but import business is fairly liberal. We quote as follows: Star, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., $3.70; 51 to 60 in., $4; 61 to 70 in., $5; 71 to 80 in., $4.30 net, Toronto, Hamilton and London.

THE "ARK" LAMP.

Johnson & Phillips 14 Union Court, Old Broad street, London, E. C., have sent out a cardboard circular with illustrations of their most recent designs in "Ark" lamps. This firm is recognized for the artistic quality and comprehensive range of their product and their literature should be received by all readers of Hardware and Metal who are interested in electric lighting.

LOWER PRICES ON IRON PIPE.

THE weakness of the iron and steel market has affected during recent months practically all finished material to some extent. Iron pipe was slow to feel the influence of the depression, but as business relaxed and the necessary raw material for its production was cheapened, the reduction in iron pipe prices has been inevitable. During the last six months there have been many changes all of a toward tendency.

Last week the most substantial reduction of the period was reported, the decline being an even 10 per cent. on all sizes from ⅜ to 2 in. Larger size pipe in unchanged as far as quotations are concerned, but for all large specifications there is such keen competition that prevailing prices in sizes over 2 in. are only nominal.

WINNIPEG BOARD OF TRADE.

THE annual meeting of the Winnipeg Board of Trade was held last week and the reports of the year and the president's address were both documents containing much that was of interest to Western readers, but these matters will appear in full in the daily and weekly papers of the province.

The officers elected for the year are:

President—H. W. Hutchinson, manager of the Fair Child Company, Limited.

Vice-President—A. L. Johnson, manager of the Ames-Holden Company.

Treasurer—Andrew Strang, of A. Strang & Company.

Secretary—C. N. Bell.

Members of Council for 1904—G. F. Carruthers, John Russell, F. L. Patton, G. D. Wood, J. B. Pearsse, H. S. Evans, Hugh Sutherland, F. W. Drewry, D. E. Sprague, D. W. Bole, A. R. Hargraft, J. W. Dafoe, Wm. Georgeson, Wm. Whyte, H. M. Belcher, G. F. Bryan.

The retiring president, G. R. Crowe, manager of the Northern Elevator Company, tendered a banquet to the members of the Board and some 200 sat down to the feast.

The town of Perth, Ont., has authorized the buying out of the Perth Electric Light Co., at $10,000. The Canadian Electric and Water Power Co. has offered to sell their complete plant to the town for $125,000.

STOVES AND TINWARE.

A Stove Dealer's Experience.

IN a discussion at the Milwaukee Hardware Dealers' Association, C. A. Peck, Berlin, Wis., gave the following expsrience :

"A lady came into my store some time back and asked the price on a certain heater which I was selling at $7.00. She then asked the price on a certain square No. 8 cook stove, which I made at $12.50. She asked what the cost of the two were. I said $19.50. She said, 'That does not sound very much like $13.50.' 'No,' I said, 'there is $6 difference.' 'Well,' she said, 'I can get those two stoves for $13.50 and I have the evidence right here,' she said, fishing out one of the mail order catalogues. The heater she showed was exactly the same as the one I offered and was listed at $6.50. She then turned over and showed me the cook stove, which was listed for $7.00. I took her into the back of the store and showed her a small size cook with four holes, 12-inch oven and No. 7 covers, which I convinced her by a comparison of figures on the cut in the catalogue was the same stove, and she said she could not cook with so small a stove as that, and I sold her the two stoves for $19.50. I was only able to do this through her candor in the matter. Another man came into my store and looked at one of my ranges for which I charge $28, and left without purchasing. Some weeks later he came in again and said he would like to get that range, but he wished to trade the range he was using as part payment of same. He further added that the range that he wished to throw in in trade for this range was a new range, and I told him to trade with the man he bought it from."

Must Ship in British Bottoms.

UNLESS some agreement is entered into between the United States and Canada, the practice of carrying Canadian goods in bond to ports in the provinces without regard to the carrying vessel, must come to an end, and a lucrative business of American railroads and American steamships running from Boston will be shut off. This has been established by the recent enforcement by the collector at St John, N. B., of the Canadian regulation that goods passing to Canada from the United States shall be transported in British registered vessels.

"The case at hand was that of a consignment of stoves from London, Ont., to St. John, by way of Boston, the water transportation being by the Eastern Steamship Company, whose steamers carry the American flag.

"Secretary of United States Treasury Shaw has been asked to make some agreement with Canada whereby the non-enforcement of the regulation may be brought about."

In regard to the above, Col. Gartshore, manager of the McClary Mfg. Company, states that the shipment of goods which had brought up the interesting point had been made via the Michigan Central Railroad. Some months ago the C. P. R. had increased its freight rates on goods from London to St. John, N. B., 50 per cent., and the McClary Company, of course, looked to other roads for a cheaper rate.

The Michigan Central agreed to carry the goods through to Boston, all rail, and then trans-ship them per steamer to St. John. At the latter place the collector of customs held that under the law such goods carried in bond through the United States, could not enter Canada unless carried in British bottoms. At the time the shipment was made the McClary Company was not aware of this point in the customs regulation.

The present trouble has been settled and the goods shipped from London have reached St. John all right, but all such shipments from Canada in future must be made in British bottoms from Boston to St. John or from any other point in the United States to Canada.

Rusting on Tin Roof Seams.

A correspondent of the Metal Worker sends the following answers to "X. Y. Z.," who asked for a remedy for the rusting of seams on tin roofs. "I would say that if he would take enough boiled linseed oil to dissolve some resin and put it on the seams before soldering, it would prevent the rusting. I think that in turning the seam on the tin the machine often scrapes the tin off the iron to a certain extent. That depends, however, upon the kind of machine used."

TRANS-SIBERIAN RAILWAY.

Samuel Smith, consul, Moscow, Russia, reports that the construction of the great Trans-Siberian Railway, comprising a length of 9,042 versts (5,995 miles), has cost 940,259,401 rubles ($484,554,415), or an average of 103,987 rubles ($53,553) per verst ($81,326.84 per mile). The loss endured through the disorders in China is estimated at 10,000,000 rubles ($5,150,000). The Minister of Ways and Means of Communication has found it necessary to enlarge the rolling stock of the fourth-class service of 7,000 cars, to be used for transportation of laborers, emigrants, and recruits.

HEATING AND PLUMBING

PREPARE FOR THE BUSY SEASON.

WITHIN a short time the plumber will be busily occupied in placing the house drainage systems in new buildings, which he will then leave until the work of other mechanics have fitted them to receive the plumbing fixtures. The interval can be used to no better advantage, suggests the Metal Worker, than in bringing to the attention of architects, builders and owners the handsome plumbing fixtures that are now available at remarkably low prices, imparting not only convenience but luxury to the modern bathroom. The plumber who makes a campaign along these lines will enjoy more than an ordinary share of patronage. He will find it profitable to expend some energy and time in the effort to make an impression upon those whose influence must be gained to further his plans. The manufacturers of fine plumbing goods have prepared the public mind by generous advertising in literature which is sure to come under their notice. The plumber can readily secure literature illustrating and explaining the modern bath, lavatory, closet, shower bath and other up-to-date bathroom equipment. He will find that his efforts will be greatly assisted if he devotes some of his time to planing a display in his own shop or showroom. The day has long since passed when people are satisfied to buy goods unseen. No matter how small the space that is available for a plumbing goods showroom, considerable taste can be displayed in the arrangement of the surroundings. If some of the fine plate engravings, which are readily secured from the supply houses, are arranged in neat frames and hung upon the walls, showing the fixtures that cannot be readily exhibited on the floor in working order, the plan will effectively supplement any display that can be made. There should be no difficulty in providing a handsome lavatory —the handsomer the better. The enameled iron lavatories, with apron, slab and back all cast in one piece, and supported either by concealed or visible brackets, are finding increased favor as they become more generally known. Sometimes a white enameled iron pedestal lavatory attracts more attention and enables the plumber to point out the greater sanitary efficiency of a fixture that is open on all sides to access for cleaning and is free from any crevice where obnoxious collections can accumulate. If a beveled glass mirror, with suitable frame, is arranged above the lavatory, and either nickel plated or glass towel rods and a glass shelf are provided in connection with the mirror, the effect is still further enhanced. There is an equally wide opportunity for a display of white enameled iron bathtubs, with shower bath, sponge rack and other equipment. The new valve flushing water closets are much more sightly fixtures than those which have been popular for several years back. The plumber who makes a neat and attractive display, keeping it scrupulously clean and having it connected so as to be seen in operation, will be in a good position to invite prospective purchasers to inspect what he has to offer, and these visits will be productive of an increased business in jobbing, which will result in a substantial addition to his profits at the end of the year. A little judicious expenditure in the way of printed invitation cards, to be sent to the ladies of the household for special visits at certain times, will go a long way toward causing the remodeling of many old plumbing systems, and will not only prove profitable to the plumber but be accepted as a substantial favor by his customers. Such methods should be regarded as essential by the modern plumber, just as the plumbing work he recommends is materially in advance of the work of a few years ago. Many plumbers are taking this progressive step, and those who do not wish to be left behind with the less profitable trade on their hands must keep in the procession.

Red Lead Production.

THE production of red lead, which forms an important ingredient in the composition of flint glass, has for many years been included in the industries of Birmingham and the district, says the Hardwareman, Birmingham. The invention of flint glass arose out of the difficulties experienced in the use of coal as fuel. To protect the glass from the injurious effects of the smoke produced by the imperfect combustion of the coal it was necessary to make use of covered pots, which increased the difficulty of fluxing the materials. Some other ingredient was felt to be necessary to increase the fusibility of the glass. This object was accomplished by the use of oxide of lead. The brilliancy of the glass thus produced, the facility with which it could be worked by the glass blower on account of its easy fusibility, and the readiness with which it could be ornamented by the glass cutter on account of its softness have caused the continuance of its use.

In recent years, however, the use of red lead in glass making is much less than formerly owing to other discoveries but it is still used, and is reckoned a valuable ingredient, in the production of flint glass. At one time the glass makers obtained their supplies of red lead from Derbyshire, but the quality was inferior and imparted to the glass an objectionable shade of color known in the trade as the "Derby blue." This defect was remedied by Messrs. Blair and Stephenson, of Tipton, who secured for many years a monopoly of the supply of the finest red lead in the market. Eight years ago Mr. Boyle, who had been for some time manager for Messrs. Blair and Stephenson, entered into partnership with Messrs. Adkins and Neck, of Smethwick, who commenced business as makers of red lead, and on the retirement of the older firm the trade became the principal producers in the Midlands. The industry has extended to other parts of the kingdom, but Smethwick still maintains the best traditions of its early reputation in this branch of Midland products.

Heating New Premises.

IN reply to "Subscriber," who asks how to heat with low pressure hot-water, premises consisting of a shop and two showroom floors above and a basement beneath the whole, the Ironmonger replies: "Each floor is 62 feet long, 39 feet wide, and 9 feet high, having, therefore, 23,000 cubic feet of space. The ground floor has a portion divided off amounting to 6,000 feet of space, which does not require heating. For the ground floor, therefore, four radiators are suggested, having a total surface of 220 feet of surface. Subscriber should put two of 65 feet each towards the front, where the most glass is, and two of 15 feet towards the rear. These can

MANUFACTURED ONLY BY
Lockerby & McComb, 65 Shannon St., Montreal
Bell Telephone Main 1989.

be served by a distinct 2-inch one-pipe circuit from the boiler, the circuit running beneath the basement ceiling. The two showroom floors should have 260 feet of surface each, and as it appears that cast pipes can conveniently be run round two ends and one side it will be easiest to use these, and they should answer well. Two 3-inch pipes will suffice, but they must not come beneath platforms, and stock should not be put too closely in front of them. These pipes can be served by a 2-inch circulation from the boiler to the first floor, and 1½ inches beyond this. The pipes will be large enough owing to the main circulation coming nearly over the boiler, and therefore being almost all vertical. The two circulations for ground-floor and upstairs must be quite distinct right from the boiler, and not join one another anywhere. The least size of boiler to give good results must have a catalogue actual power of 800 feet."

Plumbing and Heating Notes.

The James Robertson Brass Mfg. Co., Toronto, have a large contract for supplying engine sets to the Waterous Engine Works, Brantford.

The partnership existing between A. Taylor and Jas. Croucher, as plumbers, in Brantford, Ont., has been dissolved by mutual consent.

The premises of Keith & Fitzsimmons, plumbers, 111 King street, west, Toronto, were damaged by fire on February 9 to the extent of $4,000.

Bennett & Wright, plumbers, Toronto, have taken contracts for extensive plumbing in the Wm. Davies & Co.'s plant, Toronto, also for plumbing, heating and lighting apparatus in the House of Industry, Toronto.

On February 6 The James Robertson Brass Mfg. Co., Toronto, defeated the R. S. Williams & Sons' Company at hockey, the score being 3 to 0. On February 9 they also defeated the Manufacturers' Life Insurance Company, by a score of 3 to 0.

Constructions, Limited, Toronto, have been incorporated with a capital of $500,000, to carry on in all its branches the business of house and building construction. The directors are: J. W. Baylis, H. Taylor, and J. Hall, all of Toronto Junction; A. Young, Wingham, Ont.

It has been decided by the City of Vancouver to increase the capacity of the present city reservoir. The land will be cleared and the excavation and construction contract will be let this year. Tenders for brass work will be called for at once. There will be 25,000 feet of one-half inch pipe needed, and 10,000 of two inch.

Building Notes.

E. C. Walker, Walkerville, Ont., will erect a dwelling in Walkerville to cost about $100,000.

It is proposed to enlarge and renovate the Welsley Church in Winnipeg. The estimated cost of the improvements is $14,000. Mr. Russell is the architect.

Gordon & Helliwell, architects, Toronto, have taken a contract for executing extensive alterations in warehouse premises at 100 and 102 Front street, west.

Aldermen Matthews and Garrett, and the city engineer, of London, Ont., are paying visits to Toronto and Hamilton in order to secure information regarding market buildings.

J. Francis Brown, architect, Toronto, is getting out plans for a farm house to be erected at Burlington, Ont., also plans for a large warehouse for the Educational Publication Company, Shuter street, Toronto.

It is proposed to build a large Summer hotel on the island off Toronto harbor, at a cost of about $100,000. As soon as the necessary capital has been subscribed building operations will be commenced. Lennox, of Toronto, is the architect.

The City of Winnipeg is calling for tenders for the erection of four fire stations, the tender to be for one or the whole four. The plans and specifications may be seen at the office of A. & W. Melville, 367 Main street. Each tender must be accompanied by a 5 per cent. cash deposit as security. Tenders will be received until February 29.

A new Methodist Church is to be erected on Broadway and Kennedy streets, Winnipeg. The building is to be of stone and, together with the site, will cost $90,000. Mr. Stone, of Winnipeg, is the architect. The building committee are: J. H. Ashdown, R. J. Whitta, J. T. Gordon, R. Wyatt, J. S. Aikins, D. K. Elliott, Dr. Sparling, Jas. Tees and H. W. Hutchinson. The work of construction will be proceeded with early in the Spring.

The plans for the new National Museum, at Ottawa, have been approved by the Government. The building is to be 380 feet in length, 96 feet in height, and the height to the top of the tower 200 feet. It is to be of Gothic style, and the tower will be crown shaped. It will be built of Canadian stone. There will be three storeys, besides the basement. The ground and first floors are to be devoted to museum purposes, and one of the wings of the building are set apart for the Department of Marine and Fisheries and the National Art Gallery.

Building Permits Issued.

TORONTO.

Dr. Watson, a brick dwelling on College street, near Ossington avenue, to cost $3,600.

Mr. Legge, a stone and brick store on Ossington avenue, to cost $2,800.

The Gillespie Estate, alterations to stone and brick warehouses on 100 and 102 Front street, west, to cost $5,000.

King Edward Hotel, additional eighth storey to hotel, to cost $3,000.

W. Booth, alterations and additions to store and dwelling, to cost $1,500.

W. C. Lee, a two storey and attic and frame dwelling on Lee avenue, to cost $1,500.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

McIntyre, Son & Co., Limited, Montreal, have been incorporated with a capital of $1,250,000, to take over the business now being carried on at Montreal under the name of McIntyre, Son & Co., manufacturers and dealers in cottons, yarns, cloths, and other materials. The directors are: W. C. McIntyre, J. K. Whyte, D. McIntyre, A. F. Duclose, R. W. Houston, and F. J. Shaw, all of Montreal.

The Grunwald Resort, Limited, Huntsville, Ont., have been incorporated with a capital of $50,000, to carry on the business of a Summer hotel and resort. The directors are: Wm. Gall, Wm. Duperow, and J. E. Fisher, all of Huntsville; H. Gall Township of Stephenson, Muskoka; and John Ashworth, Bracebridge.

The Peerless Gas Light Co., of Montreal, Limited, Montreal, have been incorporated with a capital of $49,000, to take over the assets of the Diamond Lighting Co., Limited, Montreal, and carry on the business. The directors are: W. J. Poupore, J. G. Poupore, P. E. O'Brien, F. L. Monck, and S. G. Bergerin, all of Montreal.

The annual meeting of the directors of the Cariboo-McKinley Mining Co. was held in Toronto recently. It was decided to pay a 4 per cent. dividend out of cash on hand, and it was also decided not to go on with any further developement work until the future looked brighter and more settled. The officers for last year were re-appointed.

The O'Brien Brewing and Malting Co., Limited, Klondike City, have been incorporated with a capital of $200,000, to carry on the business of brewers and malters in all its branches. The directors are: T. W. O'Brien, Klondike City; A. Thompson, J. R. Howard, D. H. McKinnon, F. F. Dawson, A. J. Gillies, and H. A. Stewart, all of Dawson.

The harbor commissioners of Montreal invite tenders for the supply of castings, iron, spikes, bolts, oils, paints, rope, cotton waste, and other stores required for 12 months. The specifications may be obtained from John Kennedy, chief engineer. Tenders will be received by David Seath, secretary-treasurer, 57 Common street, Montreal, up to Feb. 15th.

The Keewatin Flour Mills Co., Limited, Ottawa, have been incorporated with a capital of $2,000,000, to carry on the business of a grain and flour dealer. The directors are: Wm. Fraser, R. M. Cox, Geo. Burns, E. H. Bronson, and J. Coates, all of Ottawa; E. C. Whitney; D. L. Mather, Rat Portage, Ont.; J. D. McGregor, New Glasgow, N. S.; and R. L. Borden, Halifax.

The report of Assessment Commissioner Grant, of London, Ont., shows that twelve of London's industries are exempt from taxation. The total value of the property owned by the twelve firms was shown to be $1,096,800, on which the fixed assessment amounted to $597,000, leaving $499,800 on which no general taxes are paid. That is equal to from $12,000 to $15,000 in taxes, which amounts to about 1 mill on the total assessments of the city.

At a meeting of the British Columbia Lumber Manufacturers, and the Northwest sellers, at Winnipeg, on Feb. 4, it was decided to reduce the price of lumber to the Northwest farmers. The Canadian Pacific Railway will be asked to assist in this move by charging full local rates on American imported lumber from the boundary line to the different towns. If the company did this it would practically prohibit the market to American dealers, it is claimed.

Justice Dugas, of Dawson City, Yukon Territory, while in Montreal recently said, that although the gold output in the Yukon Territory during 1903 was considerably less than during previous years, there will continue to be a large output for many years to come. He says that commercial men in Canada should not overlook the opportunities they have in the Yukon. Conditions are now much more stable than they have been, and indications go to show that they will become even more so.

Notes.

The Gilmour Door Co., Limited, have increased their capital from $100,000 to $250,000.

The Vancouver Province says that mining operations in the vicinity of Rossland have never been so active as they are at the present time.

The Leamington Oil Co., Limited, incorporated in Michigan, has been granted a license to carry on their business in Ontario, using a capital not larger than $100,000.

The Pigeon Power Lumber Co., Limited, incorporated in Wisconsin, have been granted a license to carry on their business in Ontario, using a capital not larger than $350,000.

The erection of a coal storage pocket for R. P. & W. F. Starr on their wharf, St. John, N. B., has been commenced. The coal pocket will be an elevated structure 50 by 90 feet, and with a capacity of 2,800 tons of coal.

The Dewey & O'Heir Ice and Fuel Co., Limited, Hamilton, have been incorporated with a capital of $10,000, to deal in ice, coal, wood and builders' supplies. The directors are: D. R. Dewey, H. O'Heir, and A. O'Heir, all of Hamilton.

Davis Leather Co., Limited, Newmarket, Ont., have been incorporated with a capital of $50,000, to manufacture and sell leather. The directors are: E. J. Davis, A. Davis, and Mabel Davis, all of King Township, York Co.

Fowlds Co., Limited, Hastings, Ont., have been incorporated with a capital of $40,000, to manufacture and deal in lumber, laths, shingles, etc. The directors are: J. D. Berry, C. R. Fowlds, and W. D. Berry, all of Hastings.

The Canada Wool Stock Co., Limited, Toronto, have been incorporated with a capital stock of $20,000, to manufacture woollen, cotton and felted goods. The directors are: J. M. Ewing and B. Osler, both of Toronto; and H. C. Gwyn, Dundas, Ont.

The British Canadian Colonization Co., Limited, Ottawa, have been incorporated with a capital of $1,000,000, to deal in real estate, etc. The directors are: A. T. Shillington, V. V. Rogers, Wm. Gamble, G. E. Valleau, and P. Aitchison, all of Ottawa.

Le Credit Universal, Limited, Montreal, have been incorporated with a capital of $10,000, to deal in clothes, furniture, carpets, jewelry, etc. The directors are: A. Houle, J. E. Audet, J. A. Caron, L. A. Lapointe, all of Maisonneuve; A. S. Royal, Montreal.

Ritchie & Ramsay, Limited, New Toronto, have been incorporated with a capital of $200,000 to carry on the business of manufacturing and dealing in pulp and paper. The directors are: F. A. Ritchie, C. N. Ramsay, both of Toronto; and C. W. Meakins, Montreal.

Mining industries in Hastings County are said to be booming at the North Star mine, near Cloyne. A fifty stamp mill will be erected, the work being

done by a Detroit syndicate. Also at the Crescent mine at Malone, a fifty stamp outfit will replace the present ten-stamp plant.

The Dominion Iron and Steel Co. have commenced the erection of a large coal washing plant in connection with their works in Sydney. The plant will cost in the vicinity of $150,000, and will have a capacity of washing over 2,000 tons per day. It is expected that it will be completed about May.

The Clark Blanket Co., Limited, Bullock's Corners, Ont., have been incorporated with a capital of $40,000, to manufacture and deal in blankets and other woollen and cotton goods. The directors are: J. A. Clark, F. P. Thornton, and J. Clark, all of West Flamboro Township, County of Wentworth.

IRON AND STEEL HOCKEY LEAGUE

THE seventh game of the series of the Iron and Steel Hockey League, of Montreal, came off as scheduled on the night of February 4, at the St. Lawrence rink. The contesting teams were those representing James Robertson Co., and Drummond, McCall & Co. The former team won out by a score of 5 to 1. The opposing teams lined up as follows:

Jas. Robertson Co.—W. Robertson, goal; J. Furey (captain), point; J. Corcoran, cover point; T. Kilcullen, rover; W. Quartz, centre; A. Massey, right wing; C. Fagan, left wing.

Drummond, McCall & Co.—W. Sanctuary, goal; K. Audras (captain), point; R. Tait, cover point; A. Brophy, rover; L. Martel, centre; H. O. Wilkinson, right wing; J. Gouldthorpe, left wing.

On the following evening teams representing Williams & Wilson and Thos. Robertson & Co., met at the Prince Arthur rink. The latter won by a score of 4 to 2. As Thos. Robertson & Co. have not yet been defeated, it would seem that they have first position secured. The men and positions were as follows:

Thos. Robertson & Co., Limited.—E. Bouchard, goal; P. Danberry point; H. D. Browne (captain), cover point; H. Orsal, centre; J. H. Bedbrooke, right wing; T. R. Lessard, left wing; T. Robertson, rover.

Williams & Wilson.—A. H. Milroy, goal; W. F. Walsh, point; W. G. Young (captain), cover point; F. G. McGoldrick, centre; H. Barrett, right wing; M. Bronstetter, left wing; W. Mahoney, rover.

At the close of the eighth game, the standing of the league was as follows:

	Won.	Lost.	To play.
Thos. Robertson & Co	4	0	2
Jas. Robertson Co	2	1	3
Drummond, McCall & Co...	1	3	2
Williams & Wilson	1	4	1

JAPANESE MANUFACTURING PROGRESS.

EIGHTEEN years ago the value of the principal exports of manufactured goods was a little over 16 million yen, while in 1900 it was over 137 million yen, says Kublow's Trade Review The import of manufactured goods eighteen years ago was a little over 21 million yen, while in 1900 it was over 141 million yen. There has been a very rapid development in the departments of silk and cotton manufactures, while the manufacture of hempen and woollen fabrics, of machinery, matches, paper, sugar, tobacco, matting, and umbrellas, all show very rapid increases. Of limited liability companies which have been formed for purposes of manufacture, there were in 1900, 2,554, with an aggregate capital of 216,766,903 yen, a paid-up capital of 158,851,730 yen, and reserve funds to the amount of 17,697,546 yen. Working hours, continues Engineering, as a rule, vary from 12 to 16 hours, and the wages are small compared with those of this country. Wages by themselves, however, do not give much information with regard to actual cost per unit of product, which, after all, is the determining factor. The number of institutions which exist for industrial education are numerous, and vary from the Universities of Tokyo and Kyoto to technical and trade schools of many kinds. Factory legislation the apprentice system, and, in short, all the problems which are to be found in an industrial country, are receiving attention in Japan. There are also a considerable number of special associations or institutions for the study of subjects connected with the different departments of engineering and industry, all of which publish transactions containing papers of a high standard. Detailed information is given of the laws relating to patents, designs, and trade marks, and statistics of the number of applications which have been made for the protection of inventions and designs.

BICYCLE ACCESSORIES.

RETAILERS cannot be too careful in purchasing bicycles and sundries generally. Temptation in the shape of unknown and irresponsible hawkers is ever present. Many retailers have learned from experience the danger of patronizing this class of merchants. Reason also points out that the reason why these peddlers have to take to the road with their stocks and push the sale at catch prices is that the goods are, as a rule, antiquated and unsaleable, and would not find a sale in competition with the goods sold by the recognized manufacturers and jobbing houses.

The criticism has been made against some merchants that in some lines, including bicycle accessories, cash is paid the peripatetic hawkers, while accounts with the regular jobbers are not settled promptly. This is manifestly unfair and, in all probability, such a charge can be made against very few hardware dealers.

But the warning against unsaleable goods should be heeded by all retailers, and the sophistries and eloquence of the itinerant hawker should be doubly discounted before his goods are accepted.

DO YOU USE

Apollo galvanized iron?
Costs more when the market is dull. When brisk, the demand sweeps everything out, the bad with the good.
Apollo is always worth more; and the rest of 'em less.
Quick service.

CURRENT MARKET QUOTATIONS.

February 12, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

EVOLUTION IN RAZOR GRINDING.

English full hollow ground.

German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has two distinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

GEO. W. KORN RAZOR MFG. CO., *LITTLE VALLEY, N.Y. U. S. A.*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

Pulley Blocks

A FULL LINE OF

TACKLE BLOCKS

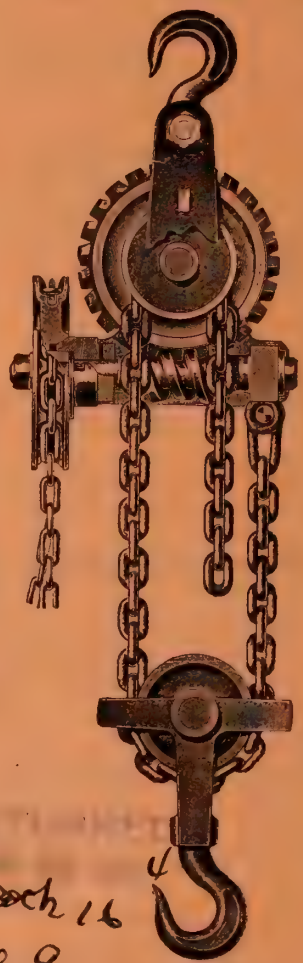
ALWAYS IN STOCK.

BLOCKS

SURE GRIP ROPE BLOCKS

Rope Sure Grip Blocks

These Blocks will hold the load at any point without fastening the rope. There is no back slip which greatly reduces the effort of lifting. Will lift from 300 to 4000 lbs.



HYPER-ACME BLOCKS

Hyper-Acme Blocks

The friction in this Block is automatically cut off as the load rises, and consequently only the load being raised need be reckoned on, thereby reducing the power required by more than one-half. All sizes from ½ to 5 ton in stock.

WESTON CHAIN BLOCKS

Weston Blocks

with chain guides which prevent the troublesome locking of chains and enable the Block to be used horizontally or at any desired angle, with 40 feet of chain to each. From ¼ to 4 ton in stock.

SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

Write for samples.

DAN PATCH 1:56¼
FASTEST HARNESS HORSE in the WORLD

DAN PATCH IN 1904

"An exchange, referring to the recent records established by Dan Patch at Macon, Ga., exclaims: 'Is there anything else?' Yes, there is something else due to happen if Dan Patch winters well and trains sound another year. If this great son of Joe Patchen is properly paced next season he will step a mile in 1:53 or better. This is just as certain to happen as the sun is to rise to-morrow morning. But he must have some such man as Scott Hudson driving the galloper, and the runner that makes pace for him must possess extreme speed. Give Dan Patch a good day and track, a runner capable of drawing a bike a mile in 1:50 if necessary, and let the latter be driven by someone belonging to the "A" class, and something will certainly happen. A mile in 1:50 is not beyond the speed limit of the champion pacer."—

From---WESTERN HORSEMAN, Indianapolis, Ind., Dec. 18, 1903.

DAN PATCH may win you $250

One of a set of colored lithographs, 32 in. x 22 in., which we give our dealers.

We are offering a Cash Prize of $250, open to any dealer who buys a $50 order on a Dan Patch Lithograph offer, and who guesses before Aug. 10, 1904, the fastest time Dan will make on a mile track during 1904.

THE SUCCESSFUL BUSINESS MAN.

The man who makes the greatest success in this world is the man who is willing to take the initiative, climb out of the old rut and avail himself of every opportunity which offers a chance for advancement. The up-to-date businessman is constantly on the look out for a chance to increase his profit.

Where a man has only a limited number of people from whom he can draw his trade, he must constantly be watching for an opportunity to increase the variety of his stock in order to obtain additional business. It is reasonable to suppose that if he can build up a large trade on some new and profitable line of goods, he will increase his net earnings just that much. You are in business to make money and have probably been looking for something of this kind for years, and to save you the trouble of looking farther the International Stock Food Company have placed their advertisement where it is most likely to catch your eye.

The International Stock Food Company has found by experience that the hardware men are in perhaps a better position than any one else to handle its goods to an advantage, and therefore, are making them a very liberal offer and terms to induce them to push the International line.

Mr. O. M. Hodson, of Bolton, has made a wonderful success in the hardware business, and the interview with him published in this issue, tells what he thinks of International Stock Food. He says they do not put out an unsaleable line, and he is right. They manufacture only the kind of goods that are in general use by stockmen and farmers all over Canada, and no dealer who has any connection with this class in his locality will have the slightest difficulty in disposing of a large amount of the International Stock Food Company's preparations every year. Of course, it takes advertising to make a specialty line of this kind sell readily, but that is just the reason you should handle International. You read their ads. in this paper, and your customers read them in their agricultural journals of general circulation. Most of their advertising is done in papers of this class, so that the dealer reaps the direct result, which is, a heavy demand for the goods.

The International Stock Food Company does not desire to load you up with unsaleable goods, for they would find it a bad ad. and they are not looking for ads. of that kind. They want their dealers to feel that they are working with them in order to rapidly increase sales.

If you are looking for an opportunity of increasing your business, it will pay you to drop a card to the International Stock Food Company, requesting a copy of their catalogue or stock book and special offer to hardwaremen.

KEMP MANUFACTURING CO., TORONTO, CANADA.

The Making of a Hardware Merchant.

FRESH from the farm and eager to get a foothold on the ladder of experience, ambitious to start right and confident of the future, a young lad, Oscar M. Hodson, applied for work to the late J. H. Moore, of Bowman & Moore, Hamilton.

So eager, in fact, was he to begin that he readily agreed to work three months without wages, his salary after than period to depend on his work during the interval.

Three weeks or so after his start Mr. Moore called the young beginner to him. "I have come to the conclusion," said he, "that I am not doing the right thing by you, so after this I am going to give you $3 per week."

The lad was as pleased as he was astonished. He was, moreover, encouraged to even greater efforts than had from the first characterized his work. When not busy at some duty set him he spent his time getting better acquainted with the store, the stock-in-trade and the methods of doing business. When the shop was closed for the evening he was generally to be seen briskly walking to his boarding house, a catalogue or two under his arm.

"Well, you see," he explained when a friend commented on this habit, at a later period of his life, "I was away from home and had few friends to visit; in fact, there was nothing else I was as much interested in as in my work."

Such industry and devotion won their inevitable reward. Before he had been in the store two months his salary was raised to $4, within six months the duty of opening the store in the morning was assigned to him, a duty of considerable responsibility.

"Now, remember," said Mr. Moore, when handing him the keys of the store, "you are the first person who has had this work to do before being in the store three years. I shall expect you to report to me if anyone takes anything away without paying for it."

"I'll certainly tell you," came the characteristic response, "I would not let anyone take my own stuff away without paying me. And as long as you are not here I'll see that no one does what they wouldn't do if you were here."

Several more duties were added within the year and when his second year of service began it found him enjoying the complete confidence of his employer and a salary of $8 per week, a good start for such a young lad, especially in view of the fact that he had never asked for an advance.

When he had been with the firm three years Mr. Moore found it necessary to take a trip to California for his health.

"Now, Oscar," he said, a few days before his departure, "I want you to keep a watchful eye on the business. John ——— is senior to you, but I want you to know that while I cannot put you over him I recognize that you know the costs better than he does and I want you to keep him from getting wrong, especially on contract work."

OSCAR M. HODSON.

This experience proved a most valuable one and gave the young man a wider recognition in the trade. In a short time he was offered a responsible position with Henry & Hambley, Drayton, Ont., and on the dissolution of that firm was taken into partnership by Mr. Hambley under the style of Hambley & Hodson, the new firm opening a store in Thamesville, Ont.

The climate at Thamesville, however, was too damp for Mr. Hodson's health and he was compelled to quit business and spend the Summer of 1896 in the "Old Country."

On returning to Canada Mr. Hodson started in the hardware business in Bolton, Ont. The business was a small one, but under his vigorous and progressive care it was speedily rejuvenated. The improvements have been steadily, persistently carried on until now Mr. Hodson's store is referred to by many travellers as a model hardware stand for a town or village.

The premises consist of a store, a tinshop, a storehouse and a private office, the last mentioned being used in the evening and when any matter of particularly private nature comes up. In the store is a cash office, from which radiate to various parts of the store the time-saving mechanism of the cash carrier, the bookkeeper also having charge of the cash desk.

Cash and credit systems are both in vogue. To do a strictly cash business with the farming community around Bolton was found impracticable. In fact, with many of the best customers the only method of collection which proves satisfactory is "once-a-year settling up." Mr. Hodson is, nevertheless, making a departure this year which is expected to improve his relations with his customers. Once a month detailed statements will be sent out. Payment will not be insisted upon but it is believed that this will prevent misunderstanding with customers. It has been found that many customers do not remember exactly what they have purchased during a year, are surprised at the magnitude of their account and are inclined to think a mistake has been made. With the monthly account system this, Mr. Hodson expects, will be avoided.

Mr. Hodson has made a comprehensive study of the conditions under which he does business and has manifested shrewdness as well as aggressiveness in the shaping of his business. When he started in Bolton he found his constituency comparatively small, so he had to add to his stock-in-trade as many lines as would increase his net revenue. Care had to be taken, however, not to buy unsaleable lines.

The backbone of his business is general hardware, including shelf goods, tinware, stoves, metals, etc. Ever alert for something new that would probably interest the farmers and attract their trade Mr. Hodson has, after a careful examination of their merit, stocked many special lines. A recent experience of his will illustrate this feature of his business.

" I had heard a good deal about stock foods," he explained to the writer a few days ago, " then the International Stock Food Co. offered me a cutter and a sleigh if I bought a certain quantity of their goods. Well, I just hustled around till I found that those who had used this food though it O.K. and accepted their offer.

" I mentioned this to a traveller one day, and later he came back to me and said:

" ' Do you know what I hear about that stock food you bought?'

" ' No,' I replied.

" ' Well, they say you are stuck with the goods.'

" That made me mad and I talked straight to that traveller. I made it clear to him that I was not in business for the sake of any manufacturers, that I was not in the habit of being ' stuck ' with any man's goods. I took him around my store and asked him to show me some unsaleable lines. He couldn't. Then I showed him what a small amount of the food I had left. I expect to send in another order within a week."

The same thing has happened time and again. He has made a bold, aggressive stroke which other men in the same line might think foolhardy. But without exception the results have proven the soundness of his judgment.

Another business move which has strengthened Mr. Hodson's connection in his district was the purchase of the next store to his hardware premises and the starting of a furniture store, which he has since continued with good results, both as far as regards profits and prestige.

In addition to carrying a wide range of stock Mr. Hodson does a lot of contract work, including furnace work, roofing, eavetroughing, metallic ceiling and wall work, etc. A unique feature of his system is a plant for making furnaces, stoves, etc.

A comprehensive stock and a good reputation for contract and repair work undoubtedly contribue in a large measure to the success of a hardware business. But Mr. Hodson is also convinced that in order to build up his business in the most satisfactory way that much attention must be given to the appearance of the store, to the arrangement of stock to reduce the work of waiting on customers, and at the same time to make the most effective display of the various lines carried. Over six hundred oak shelf drawers were put in by a local builder; the Myers step-ladders run on trolley lines between the counter and the shelfing; the show cases have a flat top, made of heavy plate glass with bevelled edges. Everything thought of has been done to make the store as enticing to the buying public as possible.

Window dressing is another feature of business to which Mr. Hodson pays great attention. At the Christmas season his window display is the " talk of the countryside." He runs his window platform back about 24 feet. He has a fine specimen of a deer mounted. This he has harnessed and attached to an ancient cutter, in which sits a live " Santa Claus."

MR. HODSON'S STORE, BOLTON, ONT.

The representation of "St. Nicholas" is so alluring that people from miles around Bolton bring their children to see the sight. The excitement is sustained and even increased by the offer of a prize, a nice doll, to each little girl who will kiss " Santa Claus." As it takes more nerve than the average maiden of tender years possesses to kiss the shaggy, mysterious personage in the sleigh the number of dolls given away does not entail burdensome expense.

Such a display as this does not do its best work unless it attracts trade, so " Santa Claus " only stays for an hour at a time. After his departure the store is left full of people and for the rest of the evening the entire staff is kept as busy as possible attending to customers. This display has been made every season for some time and interest in it has been enhanced by each repetition. Last year's Christmas trade was, consequently the largest in the history of the store.

What has been the result of such methods, of such activity and aggressiveness? Mr. Hodson has increased the business at his stand to three times what it was seven years ago and has increased his capital in similar proportion. Yet a man's success cannot be fully measured by the growth of his business nor of his bank deposits. The respect in which a man is held in his community should ever be taken into account. The fact that he has been apointed police magistrate by the Ontario Government and that at the last municipal election he was nominated for the office of reeve, councillor and for the Board of Education, and was elected reeve by the record majority of the municipality, is sufficient evidence of the respect in which the subject of the above sketch is held by his townsmen.

D. .

VISITING CANADIAN TRADE.

Mr. Henry Stromberg, of the firm of Jaffe & Sons, Manchester, Eng., is now in Canada visiting the Canadian trade. This is Mr. Stromberg's first visit to Canada but his firm is already well known among the metal and hardware buyers of Canada through their representative, Mr. Alexander Gibb, of Montreal. Mr. Stromberg was in Montreal last week consulting with Mr. Gibb and meeting the trade of that city. He intends visiting Quebec and the West.

HAMILTON, ONT.

CATALOGUES, BOOKLETS, ETC.

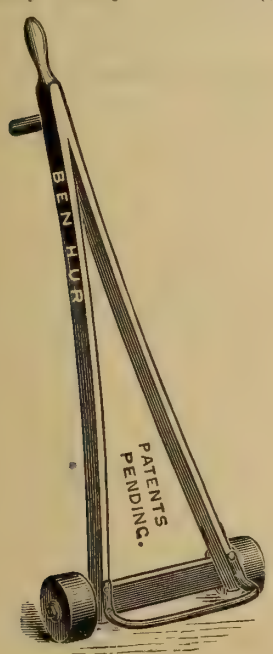
HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

WATERLOO MFG. CO., LTD.

The Waterloo Mfg. Co., Waterloo, Ont., and Winnipeg, have issued one of the most elaborate and effective hangers received this season by Hardware and Metal. In the centre of the hanger is a large lithograph of a threshing engine, below which is a view of an "Advance Champion" threshing machine. Above these is a cut showing the works of the company at Waterloo. Gilt ornamentation at the top, bottom and sides make the hanger exceptionally attractive as well as strong. Readers of Hardware and Metal interested in threshing goods are invited to write for one of these hangers.

THE BEN HUR MFG. CO.

The Ben Hur Manufacturing Co., Hamilton, are manufacturers of several specialties which should have a large sale in hardware stores. One of their lines is an exceptionally light truck, particularly handy for moving boxes,



bags, etc. It is made of tough rock elm, and is shipped one dozen in case, the total weight of the case being 100 lbs. This truck has already had a remarkable sale, particularly for export business, the total sales reaching over 11,400 trucks. It is for sale to farmers through the retail hardware trade. Readers of this paper desiring information re prices, etc., are requested to write direct to the Ben Hur Company, as it is sold so close that the business will have to be directly from manufacturer to retailer. Among the other lines sold are egg carriers, butter molds and roll paper cutters. All of these can be sold by the trade at attractive prices.

ENAMELOID

A HIGH GLOSS VARNISH PAINT FOR INSIDE USE ON WALLS, CEILINGS, AND WOODWORK. BETTER THAN WALL PAPER.

The Sherwin-Williams Enameloid is fast taking the place of the faded, soiled, and germ gathering wall paper.

Enameloid is cleaner, more healthful and more durable than wall paper. Its increasing use means a larger field for the progressive paint dealer—more business—more profits.

Enameloid has many advantages over wall paper—it is easily applied—stands any amount of soap and water—has a durable gloss—does not fade—is more beautiful than wall paper—does not retain dirt or disease germs and is more economical.

Enameloid is a paint that appeals directly to every healthful home. It is a specialty that every dealer should have on his shelves.

Enameloid is made in 18 durable and attractive colors and put up ready for the brush in convenient sized cans.

Send for price list and color cards.

YANKEE TOOLS.

North Bros. Manufacturing Co., Philadelphia, have issued their annual "Yankee Tools" catalogue. This firm's tools are too well recognized by the trade to make necessary more than this bare announcement. Hardwaremen who have not secured his booklet should send for it, as it is essential for reference.

ELECTRO SILVER PLATE.

The Toronto Silver Plate Co., Toronto offer to any of the trade who are considering the advisability of carrying silverware and to any who have not yet secured this publication their illustrated supplementary catalogue, No. 18. It is a large book, full of half-page engravings of silver sets and smaller engravings of individual pieces. The book is so attractively prepared and the illustrations give the designs of the goods in such excellent detail that in cases where a silverware stock is not carried the retailer might in some cases sell from the catalogue. This book should be in the possession of every hardwareman.

A HANGER WORTH HAVING.

What is perhaps the most artistic hanger ever given to the trade by any Canadian firm is now ready for distribution by H. R. Ives & Co., of Montreal. It is a picture of a young child rising in the morning from what is presumably one of this company's brass bedsteads. The sweet innocence of the child's face, the dishevelled hair, and disordered drapery, all unite to make a little artistic gem that is true to life. It is a sweet picture well worth having, and worthy of a place of honor in any office or home. It is a credit to the firm that issues it and to the engravers whose work it is. For 1904, Canadian firms have prepared calendars and hangers of a high order of merit, and it is no disparagement to the others to say that this is the gem of them all.

Business Changes

ONTARIO.

F. X. LAFRAMBOISE & Co., general merchants, South Indian, have assigned. Meeting of creditors 19th inst.

D. E. Friskin, blacksmith and carriage maker, Napanee, has sold out.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL.
232 McGill Street.
Montreal, February 18, 1904.

THERE has been a marked improvement in the general conditions of the Montreal machinery market since our last report. Nearly all the leading houses report a very gratifying improvement both in actual business and in the number of inquiries received. Whether or not this will be a permanent improvement, it would be dangerous to predict. Machinery businesss is always an uncertain quantity and its volume is apt to vary. It seems certain, however, that as yet this year 1904 has failed to bring the volume of business which was expected. Inquiries have been plentiful but they have not resulted in business as often as might have been expected. One or two houses have been disposed to take a gloomy view of the situation and even to talk of reducing their staff. This pessimistic feeling has not been general and in most quarters there is a renewed feeling of confidence as the result of the improved business of the last week.

Rumors are still current on the street of the difficulties and embarrassments of the American Locomotive and Machine Company. Some reductions in their staff have occasioned renewed apprehension, but the company have been able to make considerable purchases of machinery quite recently and it is evident that a good number of Montreal machinery and business men have confidence that the present difficulties are only temporary. The embarrassments of this company have been the result of a lack of capital sufficient for an enterprise so ambitious. The plant is one of the best on the continent and there is no doubt that in this era of railway expansion in Canada there will be a continued demand for locomotives. Some reorganization may be necessary to place the affairs of the company on a sound financial basis, but in view of the substantial nature of the enterprise this should not be impossible.

The general improvement referred to has been shown in almost all lines of machinery, but it has perhaps been most marked in engines and boilers. Nearly every machinery house in Montreal interviewed by Hardware and Metal told of sales of one, two or three or more engines and boilers since the first of the week. In this line the sales this week are much in excess of any previous week in 1904.

In machine tools there is a feeling of greater confidence. A few rather small sales were made within the last ten days, but larger ones are now confidently expected. One machinery agent in Montreal is enlarging his present quarters in order to carry in stock a greater assortment of machine tools. These are usually wanted for immediate delivery. Sales are often lost because local agents can not undertake to make immediate delivery.

Buyers are interested now in wood-working machinery and the indications point to some goood business. A local machinery man says that he expects some good business as soon as the trains commence to run on something like schedule time and his customers come to town. He finds that buyers of wood-working machinery prefer coming to Montreal to buying from travellers.

In power transmission machinery there has been a satisfactory movement, and some inquiry which should lead to business later on.

To sum up, there has been a gratifying improvement in this week's business as compared with last, and there is now a pronounced feeling of confidence as to the immediate future.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, February 19, 1904.

Conditions prevailing on the machinery market this week are somewhat brighter than for two weeks back. Of course on account of the continuation of the snow blockade there has been no machinery of any account shipped this week, buyers requesting that their orders be held over for shipment until the state of the roads has improved. The noticeable feature of the market this week is the increased number of enquiries for machinery of nearly all kinds. One firm report having received several inquiries for wood-working machinery. Very litttle has been done in this line for some weetks, so that present indications are somewhat brighter than for three weeks.

The demand for engines and boilers still continues very good, and this week there has even been an increase in enquiries over previous weeks. Throughout the whole month of January and so far in February there has been a good, steady demand for that class of machinery, and from the increased number of enquiries this week there will be numerous orders placed during the coming weeks.

For machine tools and for iron-working machinery in general there has been a good demand, the market being considerably more active than it was last week. There have been quite a few enquiries received, which point to good orders at some time.

There seems to be no change in the market for electrical machinery. As was noted last issue enquiries are coming in well, but not much actual business is being transacted. Manufacturers state that market conditions are bright for future placing of orders.

Gas and gasolene engines continue to have a fair demand, and enquiries are promising.

AN AUTHORITATIVE STATEMENT.

Editor Hardware and Metal: Rylands Agency and Mr. Gibb's letter on page 44 of your issue December 26, 1903. We have put this matter before Messrs. Rylands Bros., Limited, and their reply is: "It would appear that Mr. Gibb is under some slight misunderstanding in this matter and we have written to him fully on the subject."

JOHN SHAW & SONS WOLVERHAMPTON LIMITED.
Wolverhampton, Jan. 16, 1904.

Patents Granted in Canada.

An authoritative report of patents granted by the Canadian Patent Office for recipes and devises of interest to HARDWARE AND METAL readers.

Brazing Compound.

GRANTED M. L. Hersey, Montreal. Claims : 1—A soldering compound for cast iron comprising a mixture of finely divided metal, or metals, containing oxygen compounds thereof, and a flux consisting of borax, water glass, and dry carbonate of soda, substantially as and for the purpose set forth.

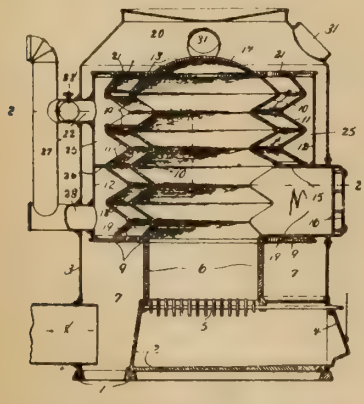
2. A soldering compound comprising a mixture of finely divided metal or metals containing oxygen compounds thereof, and a flux consisting of borax, water glass, and an alkali carbonate, substantially as and for the purpose set forth.

3. The method of preparing a soldering compound consists in mixing finely divided metal, sub-oxide of copper and pulverized glass borax, then mixing this compound with an alkali carbonate and water glass.

4. The method of preparing a soldering compound consists in mixing about 70 parts of finely divided metal, such as iron filings, about 15 parts of sub-oxide of copper, and about 15 parts of pulverized glass borax, then mixing about 40 parts of this compound with about 10 parts of an alkali carbonate, such as dry carbonate of soda, or an alkali hydrate, and about 40 parts of water glass as set forth.

Hot-Air Furnaces.

Granted Hiram Tuttle, Jr., Manlius, N. Y. Claim : 1. In a hot air furnace, the combination with an ash box having a grate opening in its upper wall, a grate, a fire pot resting upon and rising from the upper wall of the ash box,



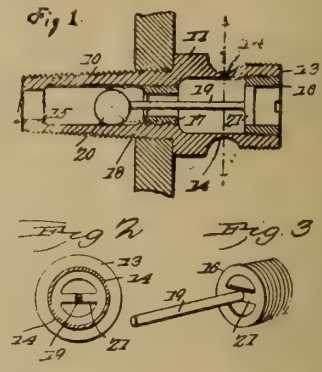
a lower deck mounted upon and surrounding the upper end of the fire pot and projecting laterally therefrom, an inner end resting upon and rising from the deck over the fire pot, the upper end being closed and its side walls being corrugated vertically, a second drum surrounding the former drum and of greater diameter to form an air space between the drums at the outside of the fire box, an additional drum surrounding the second drum and of greater diameter than the latter to form a smoke chamber, an upper deck connecting the upper ends of said drums and forming the end wall of the inner drum, a fuel conduit in the front walls of the drums, and a smoke outlet conduit leading from the interior of the inner drum through the second drum.

2. In a hot air furnace, an outer shell or jacket having an air inlet in its base and distributing chamber in its upper end, a fire pot centrally within the shell, a lower deck resting upon and surrounding the upper end of the fire pot and projecting laterally therefrom, said deck having an air passage communicating with the space surrounding the fire pot, inner and outer drums resting on the deck at opposite sides of the air passage and having their side walls corrugated vertically and separated from each other to form an air space, a smoke conduit connecting the side walls across the air space, an additional drum surrounding the former drums and resting on said deck to form a smoke chamber, said additional drum having lower and upper smoke outlets, a baffle plate between the outlets, and an upper deck covering the upper ends of the inner drum and smoke chamber and having an air passage connecting the air space between the corrugated drums with the distributing chamber.

3. In combination with a fire pot, a lower deck resting on the fire pot and having an air passage communicating with the space surrounding said fire pot, an inner drum resting upon and rising from the deck at the inside of the air passage and having vertically corrugated side walls, a second drum resting upon and rising from the deck at the outside of said passage, a third drum rising from the deck and surrounding the second drum, an upper deck mounted upon the upper ends of said drums and closing the upper end of the inner drum and also the space between the second and third drums and having an air passage leading from the space between the first and second drums, a fuel inlet conduit, and a smoke outlet conduit leading to and from the interior of the inner drum.

Steam Generator and Safety Nipple.

Granted F. A. Colwell, Oakesdale, Washington. Claim : 1. A safety device for steam boilers and the like, consisting of a plug adapted for insertion through the boiler shell and having a weakening channel exteriorly of the boiler, a bushing within said plug, between its inner end and said channel and having an inwardly facing valve seat, a valve adapted for seating upon said valve seat, and a bushing within said plug between its outer end and said channel and carrying a stem adapted to normally maintain said valve unseated.



2. A safety nipple, consisting of a plug adapted for insertion through the boiler shell and having a weakened portion disposed exteriorly of the boiler, a valve seat formed within said plug in the portion thereof disposed within the boiler, a valve adapted for seating thereupon, a bushing within said plug between its outer end and said weakened portion and carrying a stem adapted to engage and maintain said valve normally unseated.

Rather Fast.

It is not long since the thought of travelling a mile a minute made people shudder. Quite recently German engineers have attained a speed, with electric locomotives, two and a half times as fast as that, or one hundred and fifty miles an hour. To accomplish this the rails and road-bed had to be strengthened again and again, to withstand the strain and vibration that obtain at such speed. Think of travelling from Toronto to Montreal in two hours and a half. Yet this is all the time necessary to cover the distance at that velocity. Such a condition of affairs is not only practicable but highly possible, and who dares prophesy what the next generation may see in that direction. In accomplishing such a feat it was not only the high state of the electrical engineering art that made it possible, but as well the great progress that has been made in the iron and steel industries.

Some people raise money by raising cheques, then the drawer of the cheque raises Cain, because he has to stand the loss, whereas the simple precaution of using

A Canada Cheque Protector

would prevent alterations of a cheque and protect it from being changed to a larger amount.

The Pediail.

ONE of the most remarkable machines of recent times is the pediail, which, according to Professor Hele-Shaw, of Liverpool, promises a revolution in mechanical locomotion.

It is intended for overland travel, and the bearing surfaces on the road are large pneumatic feet instead of wheels. Instead having a permanent rail carried for the whole of its length upon sleepers, and wheels, running upon this rail, the process is invented. The feet or sleepers are placed upon the ground, but instead of the rails being carried upon the feet, the latter support wheels, which act as bearers for a short length of rail attached to the moving carriage. The pediail consists of two parts. One is a railway fastened to the axle box, without revolution; and the other a kind of circular box carrying spokes, rollers and feet, in such a manner that the rollers and feet are placed on the ground, and the rail runs on them. The machine is described as half traction engine and half elephant. It will climb the steepest hills, and walk over large stones and other obstacles. It passes over ruts and soft ground with the greatest ease and without damage. Moreover, it is believed that this wonderful machine is the forerunner of a new type of road making apparatus, for in passing over the road the action of stamping improves it greatly instead of injuring it as does the ordinary traction engine.

A Misleading Report.

Editor Hardware and Metal:

Please note that your reference on page 21 in issue of February 13th, Hardware and Metal, which reads as follows, "The Dodge Wood Split Pully Co. have been doing a good business through their Montreal agents, Laurie Engine Co." is distinctly misleading, and an error from start to finish. There is no such concern as the Dodge Wood Split Pulley Co. and Laurie Engine Co. are not the agents of Dodge Mfg. Co. and it so happens certain conditions exist which make this statement altogether misleading, and has a tendency to do us an injustice. We consider it would be quite in order for you to correct this, as our advertisement on page 20 of the same issue should make this perfectly clear to you.

DODGE MANUFACTURING CO. OF TORONTO.

Toronto, Feb. 15, 1904.

Machinery and Electrical Notes.

The New York underground railway will be equipped with all-steel cars.

Owing to lack of fuel the Wiarton, Ont., electric lighting plant has shut down.

C. F. Jackson & Co. are to build the dry dock at Burrard Inlet, B.C., which is to be large enough to accommodate vessels of 100,000 tons.

Alfred Rubra, of the Machinery Exchange, Montreal, is extending his present quarters in order to carry a more extensive line of machine tools.

The main building of the new concentrator of the Rossland Power Co., Rossland, B.C., has been completed and the work of installing machinery is progressing rapidly.

Robert Hastey, chairman of the Fire and Light Committee, Ottawa, is calling for tenders for the supply of electric power for street lighting. Tenders will be received until March 14, 1904.

G. H. Linton, manager of the Bowmanville Foundry Co., Bowmanville Ont., thinks the tariff should be revised, several important changes being made that would be beneficial to foundry manufacturers.

The Laurie Engine Company, Montreal, report the sale of a large amount of piping for the Winnipeg Street Railway. The Winnipeg Street Railway have cancelled their order for a 3,000 foot condenser and are taking a 5,000 foot condenser from the Laurie Engine Company.

R. R. Jameson, general superintendent of the Western Division of the C. P.R., says that as soon as the weather permits the erection of the new heavy repair shops at Calgary will be commenced. Two new branch lines are also projected, one of these will run east from Wetaskawin, and the other will extend to Lacombe.

The J. M. Ross, Sons & Co., Limited, Brampton, Ont., have been incorporated with a capital of $99,000, to manufacture and sell stationary engines, portable and traction engines, threshing machines with all attachments, saw mill and other machinery. The directors are: J. M. Ross, A. H. Ross, F. J. Ross, E. L. Ross, and M. Ross, all of Brampton.

The Ontario Wind Engine and Pump Co., Limited have just received enquiry from a Government farm in one of the islands of the West Indies for one of their Canadian Airmotors. It is interesting to know that this firm's goods are in demand in so many portions of the globe. Their home trade is increasing so rapidly that their capacity is taxed to the utmost.

The Canadian Westinghouse Co., Limited, is about to open a branch office and warehouse in Vancouver for the trade of this province. Mr. H. D. Bayne, of Montreal, one of the officials of the company, is arranging for opening the business here, securing premises, etc. Mr. Scribner, of the Seattle office of the Westinghouse Co., well known to the trade in this province, is to be in charge of the British Columbia branch.

A. C. Thompson, of the Thompson Foundry Company, Sydney, C.B., says that as a manufacturer he is in favor of a revising of the tariff in favor of higher protective duties. He thinks that bounties and bonuses to Canadian industries should be done away with, and that they should be encouraged by means of protective tariff. He says: "We are at present manufacturing on too small a scale to compete without assistance with the larger manufacturing interests of the United States, to whom whenever there is a depression at home, Canada affords a dumping ground for their surplus goods. I know of Canadian manufacturing concerns having been compelled to drop their prices 20 per cent. to meet this competition."

The C.P.R. Co. is looking into the advisability of consolidating their electric lighting plants in Vanvouser. At present the big central depot, the Vancouver Hotel and opera house and the shops and local yards are each lighted by separate steam plants. Mr. C. H. Hines, chief electricial engineer for the C.P.R., who has paid several visits to the city in the past few months, is authority for the statement that it was possible a consolidated plant will be put in and power secured from the Vancouver Power Co. instead of from a seam plant. In case a steam plant is installed it will be at the C.P.R. shops and feed wires will be carried along the right of way to the C.P.R. depot. Mr. Hines, while on the coast is looking after the plans for lighting the new C.P.R. hotel which is to be erected in the city of Victoria, as soon as the reclamation of the James Bay flats is completed.

The annual meeting and banquet of the officers, general agents and office staff of the Gould, Shapely & Muir Co., Brantford, Ont., was held recently. These meetings are always well attended by the general agents from coast to coast. Matters of trade and questions pertaining to the welfare of the com-

pany are discussed, and from the meetings many valuable suggestions are obtained, which can afterwards be carried out to the advantage of the company. The following are the general agents who were present: T. Berney, Athens; Joseph Dube, St. Hyacinthe, P.Q.; R. Brockbank, Paris; T. R. Scott, Ottawa; J. Wier, Kentville, N.S.; O. Beare, East Toronto; J. P. Currie, Port Hope; M. Virtue, Sr., Woodstock; Charles Sockett, Guelph; J. Swan, Brucefield; J. A. Letroy, St. John, P.Q.; and R. Townsend, G. C. Smith, C. H. Herod, and A. McCausland, of Brantford. At the banquet the address of welcome was given by Mr. E. Q. Gould, president. Speeches were given by John Muir, manager; by W. H. Shapely, vice-president; by Geo. McRae, superintendent; by H. Yeigh, treasurer, and by H. H. Whittaker, secretary.

ENQUIRIES FOR CANADIAN TRADE

The following were among the inquiries relating to Canadian trade received recently at the Canadian Government office in London, Eng.:

3. A London firm having a branch in South Africa is desirous of opening up business with Canadian houses for the export of goods to South Africa.

4. Inquiry is made for names of Canadian furniture manufacturers in a position to export office furniture, roll-top desks, chairs, etc., for English and Scotch markets.

5. A London agent with a knowledge of the hardware, novelty and woodenware trades, is seeking a few good Canadian agencies for the United Kingdom.

6. A German firm is desirous of entering into correspondence with a good Canadian house with a view to importing Canadian products, more especially fruit (apples, applechop and evaporated apples).

The following were among the inquiries received at the Canadian Section of the Imperial Institute, London, S.W.

7. The manufacturers of gelatine oil suitable for lubricating and harness purposes, and also veterinary use, is desirous of introducing the oil into Canada and invites correspondence from firms interested.

9. A firm manufacturing paints, oils, colors, varnishes and greases, wishes to do business in Canada and is prepared to appoint suitable Canadian resident agent.

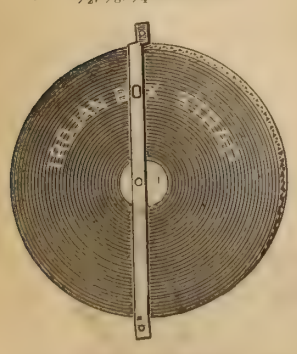
10. An import and export house, more especially interested in chemicals, oils, drysalteries, wishes to hear from Canadian firms seeking either buying or selling agents in the United Kingdom.

[The names of those making inquiries may be obtained from the Editor of THE CANADIAN GROCER.]

Advantages of a Small Kitchen.

In regard to the size of the kitchen in a house, a Boston writer suggests that a small one has many advantages over a large one, and says: A large kitchen with a cellar door at one side, a table at another, and the sink at still another, requires too much walking. Time is consumed in going from one place to another rather than with actual work. Have the range placed in a light, convenient part of the kitchen. In front have a good-sized table, containing drawers and spaces underneath for keeping utensils, one portion of the top covered with zinc and the other half left plain. Have underneath the top a baking board which can be easily pulled out. The sink should be near at hand. The pantry may be on the other side of the kitchen and be sufficiently large to hold a barrel of flour, a small pastry table, and a convenient arrangement of shelves. The floor may be of hard wood or it may be covered with linoleum or oil cloth, or the ordinary rubber coverings. A tile floor is exceedingly handsome, but rather hard on the feet, making small rugs or bits of carpet a necessity if comfort is to be considered.

Made in 4 widths, ½, ⅝, ¾ and 1 in.



Packed in cases of 20 reels each.

IMPROVED TROJAN BOX STRAP

A continuous band, **not riveted strips of sheet steel like others on the market.** So far ahead of other lines that it is in a class by itself.

Also plain TROJAN HOOP IRON. Made in different widths and gauges. Put up on coils of about 2,000 ft. each. Packed 500 lbs. to the barrel.

NO WASTE. STRONG and HANDY.

SPECIAL LINES IN THE HARDWARE STORE.

FEBRUARY is a good month for the retail hardwareman to make decisions and to prepare and start a campaign for any lines likely to be in demand during the Spring and Summer months.

Hardware and Metal has so frequently made the point that the retailer must look for progress beyond a certain point in the special lines he carries that we feel our readers must have by this time fully admitted the soundness of our position. Any comments re the matter that have reached us bear out this assumption, so we will take the matter for granted.

Then, what lines should receive attention. Circumstances so frequently alter the conditions that one cannot dogmatize on this point. Yet there are many lines which do not receive as much attention as they should in some towns. Some of these should be considered early in the year, giving ample time to study where and how to buy them, how much to buy, how to display and how to push to best advantage.

Sporting goods do not, in some cases, receive the time and thought they deserve. This line is one which essentially belongs to the hardware store and is one that in the Spring and Summer and in early Winter constitutes an important feature. Golf supplies, croquet sets, football, cricket, baseball and lacrosse outfits, boating sundries, hammocks, etc., are all in general demand in the Summer. A large share of the business in these lines has in the past been done by catalogue houses in Toronto and Montreal, but as these houses get exceptionally good profits there is no reason why the retail hardwareman should not enter into direct competition with them so effectively that their sales in his town should be almost cut off.

Silverware, too, does not receive the care which is its due in a hardware store. The hardware store of a generation ago was not particularly attractive. But the modern developments such as plate glass fronts, glass show cases, hardwood shelf boxes, delicately tinted metallic roofing, etc., has so improved the appearance of the average hardware store that beauty is expected in it. Consequently the merchant who succeeds best in making the stock most attractive has a big advantage. This is one of the great points in favor of silverware. Nothing adds in greater degree to either window, counter or show case display than good silverware. Moreover there is good profit in the line and there is a good sale for it all the year round and particularly during June, the "month of brides."

With the Springtime will come a general disposition to clean up, to improve the appearance of residential and other property. The acute hardwareman will be on the alert for business arising from this condition. His paint and oil business will expand in proportion to the activity of building operations and the activity of his operations among the builders. There has been during recent years a general tendency to do away with the board fences which constitute a veritable eye-sore in many places. In some instances no fence at all is erected. In others an ornamental iron fence is built up. Hardwaremen can readily secure the agency for firms making such fences and should be able to get a share of the business in this line arising out of the movement towards general improvement.

Should hardwaremen carry stock foods? A druggist while in conversation with the writer this week, insisted that this line rightfully belonged to the druggist. To such the answer is simply that as long as stock foods are put up in standard packages, with ample directions attached, the druggist nor any other class of merchant has no right to claim the monopoly of their sale. The druggists of Ontario have had sufficient influence to secure legislation preventing other merchants than themselves handling patent medicines. They would presumably like to insist that only druggists be permitted to sell anything in the nature of a condition powder, for beast as well as man. But this would be too absurd. To-day stock foods are sold by hardwaremen, flour and feed dealers and druggists. The business goes to the merchant who is most aggressive in reaching for it. Hardwaremen have found it a good line and more of them are taking it up every week.

Such lines as lye, blacking, etc., should receive particular attention at times. The total sale in any one of these lines is small compared with the sale of nails in the average store. But it is a fact that in many towns the profit to the retailer on $10 worth of lye would be greater than he obtains on $100 worth of nails. The merchant who dispises the small lines makes a serious error.

TRADE OPENINGS IN AUSTRALIA.

THE second weekly report of Canadian commercial agents abroad, issued by the Department of Trade and Commerce contains some interesting suggestions from Mr. D. H. Ross, the commercial agent for Victoria, South Australia, Western Australia and Tasmania. Mr. Ross reviews the trade con-

ditions in the antipodes and directs attention to the enormous wheat crop which has recently been harvested. He estimates the Australian crop at 73,000,000 bushels, which will leave from 48,000,000 to 40,000,000 bushels available for export. This large wheat crop, the increased exports of dairy produce, the brisk and buoyant state of the wool market and the satisfactory increase in the output of gold combine, in the agent's opinion, to ensure a period of prosperity for the island colony. Australia is in a position to be a good customer.

What can Canadian manufacturers do to increase their business in Australia? To this question the agent devotes some attention and he mentions several lines of manufactures in which he considers that there is an opening for Canadian trade. Among others, he mentions the demand for Canadian cut tobacco which has already made its appearance in Melbourne and which will meet with a better sale when Canadian manufacturers are better acquainted with the class in most demand. The cut tobacco should always be enclosed in air tight packages.

In the agent's opinion, there is a good opening for Canadian made calcium carbide. Acetylene gas is now being used very extensively as an illuminant in small rural towns and country districts, halls, churches, hotels and residences. The demand for calcium carbide is growing rapidly and large quantities are imported from England, Sweden, and the United States. Importers want to be certain of regular supplies and would probably transfer their business if they could receive assurances on that point. This would be a very important factor in securing new business.

The agent further reports that some fair orders have been forwarded recently from Adelaide to Canadian manufacturers. This result, he says, has been obtained by the persistent efforts of the representative of a Toronto exporting concern. That there is a good market in Australia to be developed by Canadian manufacturers seems evident. Australian importers are anxious to increase their purchases in Canada, but as is always the case, seller must seek buyer. A closer mutual acquaintance would undoubtedly result in an increased trade between the two countries.

This latest move of the Department of Trade and Commerce is to be commended. The weekly reports should result in an increased export trade.

THE BICYCLE AND THE FOUR HUNDRED.

A REVIVAL in the bicycle trade in the United States is made evident through the extensive resumption of advertising in its large magazines. There is no doubt that last year the bicycle business in Canada and United States displayed considerable strength and the manufacturers in the Dominion are authority for the statement that the orders booked so far this season nearly double those registered up to the same time last year. The general attitude of the public, too, towards the wheel is most encouraging for in those sections of the United States which is to-day beyond the cold pale of Winter, it is completely in vogue.

Principally at such stylish resorts as Ormond Beach, Florida, where the great automobile races are now in progress and where the "four hundred" of the republic are collected, the bicycle is used to a great extent as a means for pleasant exercise and outings.

The bicycle and hardware merchants of the United States are preparing for a busy year and it would not seem unwise for their Canadian brethren to anticipate something similar in this country.

KEEPING UP-TO-DATE.

SOME merchants believe they cannot afford to take trips once or twice a year to larger centres; others in practically similar circumstances believe they cannot afford to stay at home.

The difference of opinion is almost absolute and one would almost decide without a second thought that either one classs or the other must be quite in error as to what they can afford. Yet a knowledge of the men and the conditions might lead to the conclusion that both classes are right in their opinion.

To one merchant a visit to a city like New York for instance, would be a waste, should be chargeable to "personal account," while to another such a trip would constitute an investment, and could reasonably be charged against the business because of the returns it would yield in the days to come.

One merchant would have a gay time in the city but would see little else than the "Bowery," Coney Island, etc., while another would have just as good an outing and at the same time would come home full of suggestions and hints for his business. He would have noticed new methods of window dressing, store arrangement and in a score or more of ways would have added to his store of knowledge of his business.

Both these men would be wise to take such a trip once at least, but the former could afford to take it but seldom whereas the latter would get such returns from his first trip that he would soon be in a position to take a trip more frequently than his rival who "drops business when away on a holiday."

OPENING FOR INDUSTRIES.

IN reply to an enquiry sent out by the publishers of Hardware and Metal Thomas F. McGuigan, city clerk of Vancouver, gives some information which may be of service to our readers:

A cement mill is a much needed industry in Vancouver or the adjacent district. The yearly consumption of cement, on the Coast as elsewhere, is increasing rapidly. The only mill on the Coast is located at Colton, Southern California, a very small affair, some 60 miles back from the Coast. Nearly all the cement used on the Pacific Coast comes from England or Germany, the freight on which would mean a good margin for profit to work here. We have the raw material in immense quantities; the demand is large and ever increasing.

The above is worthy of the attention of cement works promoters. There is serious fear that the enormous and continued increase of production may lead to an over production on the Ontario market which may lead to disastrous results. Without going into the merits of this case it is self evident that if the conditions are found by an expert to be as favorable as would seem to be the case it would be wise if some of those who propose to enter into the Ontario market as cement producers would first devote their attention where present competition is not so keen and where their works and product would be more appreciated.

MR. H. MONTAGU ALLAN.

A TYPE of the Old Country business man, of the Old Country squire, in fact, is Mr. H. Montagu Allan, the eldest living son of the late Sir Hugh Allan, and to-day one of the chiefs of the great Allan Line of Steamships.

Mr. Allan is the type of man who would have succeeded in business if he had been started in the world without a dollar. His life has been one of constant activity and work, yet with all he has scarcely been in the public eye until the last year or two, when his influence has been more in evidence in big financial and industrial concerns, and quite recently when he was urged to run for the presidency of the the Board of Trade. His love of fair play prevented his opposing Mr. Drummond, who rightly earned the place.

A glance at the man himself would see a tall, erect, full-chested man usually modestly dressed. Considerably less than half a century of years, more than half of them filled with active efforts toward higher ends, have printed their mark on a broad, well-shaped head, stamped it with reflectiveness, but kept its serenity. The rest of the face might be owned by an English lad—smooth, rosy, as if its owner had never had a care, never lost a night's sleep, or a day's enjoyment.

Mr. Allan inherited position from his father, but he never has for a moment traded upon the position in which he was born. He was educated partly in England and Scotland, and at Bishop's College, Montreal, in fact the larger portion of his life has been spent in Montreal, where he resides to-day in one of the most beautiful ancestral residences that we have in this new country. "Ravenscrag" is the name of the old Allan home, and has been for nearly a century the centre of magnificent social and intellectual gatherings. Royalty has, on many occasions, been entertained here. It is so unpretentious as a family house that one seldom sees anything in the public press regarding the doings of this home.

Mr. Allan, notwithstanding the man-made conditions that opened life easily for him, entered into work early under the keen tuition of capable managers of the Allan Line, where he built up a strong knowledge of the steamship business. He has never neglected the smallest detail of his business, and while he has capable heads in each department, he is said to be in complete control of all transportation matters.

The world of politics has never held any fancy for Mr. Allan, although many inducements have been made for him to enter the turmoil. He has other tastes.

Mr. H. Montagu Allan, Montreal, of the Allan Line of Steamships.

Notwithstanding the multiplicity of business calls upon him, he finds time to be president of the Merchants' Bank of Canada, president of the Canada Paper Co., director of several large milling, metal and other industrial companies, and a devoted worker for charity; he is also an enthusiastic sportsman and a great lover of music and art. At one time he was treasurer of the Board of Trade during 1891-2. He has frequently held the highest honors the Hunt Club could bestow upon him, and is a great lover of fine horses and dogs.

In addition to this his conservatory is one of the most beautiful in Montreal. He is possessed of a very retiring disposition, yet is a brilliant conversationalist when the subject interests him, and his extensive travels abroad enliven his companionship, which only a select few enjoy. In the business community he is esteemed for his judgment, open-handed generosity and unassuming character at all times. Mr. Allan is a representative Canadian business man, but merges all the English solidity with the nervous vitality of the modern West. C. D. C.

AGENT WANTED.

A London, Eng., metal house desires to secure a Canadian agent or agents, resident in Montreal or Toronto, for the sale of tin plates. And persons desiring to secure such an appointment are requested to write to the Editor, Hardware and Metal, Montreal or Toronto.

PERSONAL MENTION.

Mr. A. L. Sykes, of the Canadian Cordage and Manufacturing Company, of Peterborough, Ont., was in Montreal last week consulting with the firm's Eastern sales agent, Mr. W. J. Muir.

Mr. R. F. Hay, of Winnipeg, has been appointed manager of the branch which the Moose Mountain Lumber and Hardware Co. have opened at Arcola.

Messrs. Merrick, Anderson & Company, Winnipeg, have decided to open a branch in Calgary.

Mr. Gerald Lees, manager of the new Canadian branch of Mander Bros., varnishes and paints, returned to Montreal last week after an extended business visit to the Maritime Provinces. Mr. Lees seems well satisfied with his reception by the trade in the lower provinces. He will visit the Western trade next month.

Mrs. I. Franklin, Southampton., Ont., has sold her hardware and tinware business to J. H. Filsinger. The Southampton Beacon says that Mrs. Franklin has conducted a successful business in the town, and is now retiring

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, February 19, 1904

Hardware.

THE condition of the hardware market is much improved. The snow blockades had the effect of keeping business for January slightly less than for the same month of 1903, but the first three weeks of February have seen an increase over last year that makes business for 1904 up to date quite as good as for 1903. This is a very satisfactory state of affairs considering the way in which busness has been hindered by the demoralization of the railroads. Travellers have been unable to make their regular visits although nearly all have remained out and have done what they were able. Orders have been coming in by mail in satisfactory numbers and the general outlook is good. Prices throughout are steady this week and there are few changes of much importance. Builders' hardware is very firm and advances of from 10 to 15 per cent. are being made by some houses. In fact prices in almost all lines of shelf hardware are firm and advances here and there may be expected. There is still some complaint that manufacturers are not able to supply bolts and nuts of some sizes, but there has been a great improvement in the situation and from now on there should be little trouble.

Lawn Mowers—For Spring delivery some very good orders have been received this week. Prices are: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Garden Hose—This is another line now in excellent request for forward delivery. The list price was published in our issue of January 23rd. The discounts are as follows: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—Orders are now being booked freely for harvest tools. The discount is 60 per cent.

Spring Hinges—A good inquiry for spring hinges for forward delivery has been one of the features of the market this week. Prices remain: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wooden Goods—As has been noted before in these columns the market for wooden goods of all kinds is firm and advances have been general. As prices on most lines are "open" it is impossible to quote with exactitude, but advances of from 10 to 50 per cent. have been made by most houses within the last two months.

Game Traps—An occasional order is still being received for game traps. The discount on "Victor" is 72 1-2 per cent. and on "Hawley and Norton" 60 and 2 1-2 per cent.

Poultry Netting—Some business is being booked for Spring delivery, but there has not yet been much activity. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-guage, the discounts are 55 and 5 per cent.

Wire Nails—There is not much business for present delivery owing to the blockade on the railroads, but for Spring shipment orders are coming in freely. As noted last week, Windsor is not now a delivery point for wire nails We quote: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, and St. John.

Cut Nails—There is very little activity at present. The price is still $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—There is now some improvement in the demand for Spring delivery. From the Northwest a number of inquiries are reported which are likely to result in business. We again quote as follows: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—One or two large individual sales have been made but general business is quiet. The discount is still 25 per cent.

Horsenails—A fair seasonable trade is reported at unchanged prices. We again quote the following prices: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—The demand continues fair at unchanged prices. We again quote as follows: Iron shoes light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal onlv.

Screen Wire Cloth—There is a better demand for Spring delivery. The price is still $1.50 per 100 square feet.

Galvanized Coil Spring Wire—The volume of business this week has not been very large but it is considered satisfactory. Prices remain unchanged as follows: Nos. 6, 7, and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—A marked improvement in the demand for galvanized wire is one of the features of the hardware trade this week. We quote the following firm and unchanged prices: No. 5, $3.65; Nos. 6, 7 and 8 $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—Although a great number or orders were booked early this year, business for forward delivery is still brisk. A marked increase is noted this week. We quote as follows: $2.75 per 100 lbs. f.ob. Montreal and $2,50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—In fair demand at the following unchanged prices: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—A moderate amount of business is doing. The discount is 25 per cent., with net extras as follows: 1 and 2-lb. hangs, 25c. per 100-lbs.; 1-2-lb. hanks, 37 1-2c.; 1-4-lb. hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—A brisk trade of large volume is doing at steady prices. We quote following discounts: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Trade is fairly brisk. Some difficulty is still reported in having orders filled for some sizes, but there is a big improvement in the situation and there should be little trouble this season. Our quotations are as follows: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—An active movement is reported at unchanged prices. The discounts are: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—An average sorting business was done this week at the following unchanged prices: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Cordage—Trade is showing some improvement. Cotton goods continue firm at prices quoted in our last issue. We again quote as follows: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 19 to 20c.; cotton twine, 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30 to 31 1-2c.; cotton candle wick, 22 to 24c.

Building Paper—There is some demand from the city trade, but business with outside points is not very brisk. We again quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll: dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—Business appears to be absolutely dead at present and in the absence of actual transactions prices are purely nominal. We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl.; ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—The same remarks apply also to firebricks. We quote: English $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

The remarks in our last isssue as to the state of this market still apply. Good orders are being placed for Spring delivery in almost all lines although the snow blockade is hindering travellers from keeping their engagements on the road. In spite of these drawbacks business for 1904 has been in excess of the 1903 business for the same weeks. A feature of the market has been the steady demand for iron pipe all Winter. Business in this line shows a big increase this week. Block tin tubing has been in extraordinary demand by the plumbers to be used in thawing out frozen pipes and a leading supply man tells us that none of it can now be bought in the city. Prices throughout are unchanged this week except for a slight advance in solder.

Lead Pipe—There has been a marked improvement in the demand for this line. The price is still 8c. for composition and waste and 7c. for ordinary. The discount is 35 per cent.

Iron Pipe—The extraordinary demand for iron pipe is the feature of the market this week. Prices remain steady at the reduction noted a week or two ago. We quote: Standard pipe, per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20: 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.90. The discount on all sizes of extra heavy pipe is 12 1-2 per cent.

Soil Pipe and Fittings—There is the usual steady demand. The discounts remain as follows: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—In sympathy with the stronger tin market, solder has been advanced 1-2 cent. We now quote: Wire solder 18 1-2c.; bar, 18c.

METALS.

Business in metals is quite satisfactory for the season. The freight blockade has interfered with sales for immediate delivery, but orders for Spring are now being booked for large quantities. There is a firmer feeling throughout. The tinplate market in England continues very firm and prices locally are well maintained. Tin is much stronger and concessions on prices quoted are not obtainable for quantities. Copper is a little weaker and prices

quoted would probably be shaded for large quantities. Antimony is firmly held at the recent advance.

Pig Iron—As noted last week there is not much pig iron on the Montreal market at present and sales are very light as the foundries are well supplied. Summerlee is quoted at $20.25 to $20.75 per ton.

Bar Iron—Some large sales of bar iron have beeen made recently. Prices are: Merchants' bar, $1.80; horseshoe iron, $2.05; forged iron, $2.

Black Sheets—The English market is still very firm and in sympathy, local prices are well maintained. An improvement in the local demand is noted this week. We again quote: 28-gauge, $2.35; 26-guage, $2.30; 22 to 24-gauge, $2.25; 18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Galvanized Iron—There has been a fair movement this week and some booking for forward delivery. We quote the following prices for 28 gauge: Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—In sympathy with the strong English market, local prices are firmly maintained. We quote cokes at $3.75 and charcoals at $4.

Terne Plates—The price is still $6.75 to $7, the former price being for large quantities.

Ingot Tin—The market is firmer since our last report and the concessions then referred to are not now obtainable. The price is 32 to 32 1-2c. with no concessions for quantities.

Ingot Copper—This item is somewhat weaker. The price is 13 3-4 to 14c. per lb. but for quantities these figures would undoubtedly be shaded.

Coil Chains—There has been no change in price. We quote the following prices: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch., $4.00; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Antimony—Firmly held at 8c. per lb.

Canada Plates—Although Canada plates are very firm both on the English and the local markets there are no quotable changes. Prices are as follows: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60c., $4.25 to $4.35.

Pig Lead—There has been an advance in pig lead which is now firmly held at $3.25 to $3.40. Only for good round lots would the former price be accepted.

Zinc Spelter—Still quoted at 6c.

Scrap Metals—Copper is cheaper and there is an easier feeling throughout. We quote: Heavy copper and wire, 9 1-2 to 10c per lb.; light copper 10c.; heavy red brass, 10c.; heavy yellow, 8 1-2c.: light brass, 5 1-2c.; lead, 2 1-4 to 2 1-2c.; zinc, 2 3-4 to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $13 to $15; steve plate, $12; mallable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers 6 to 6 1-2c. per lb.

ASHES.

Receipts continue very light, and prices are firm but unchanged. We quote :

First pots, per cwt	5 00	6 10
Seconds	5 60	5 65
Pearls, per 100 lb	7 00	7 25

HIDES.

The market is quiet, and there is no quotable change. We quote :

No. 1 beef hides	0 08	0 08½
No. 2 "	0 07	0 07½
No. 3 "	0 06	0 06½
Lambskins		0 75
No. 1 calfskins		0 11

MARKET NOTES.

The Canada Hardware Company, Montreal, are offering special prices in pumps and fittings. They have a full assortment of patterns and their stock is large. They are prepared to quote prices for immediate or for Spring delivery.

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street, East.
Toronto, February 19, 1904.

Hardware.

"I DO not remember a Winter when business was so thoroughly tied-up as it has now been for some time," said a large jobber this week. The railroads have for weeks been unable to deliver goods with any degree of despatch, but now they seem to be quite unable to cope with the conditions. The C.P.R. has refused to accept any freight for the Georgian Bay district, while on no branch nor on the main lines of either G.T.R. or C.P.R. can one depend on delivery within specified time. Much that generally goes forward as freight is now sent by express. This is a particularly valuable service for manufacturers running out of a minor but essential material, or for merchants needing immediate shipments. But regular business is not likely to be resumed until after a good thaw. Retailers do not seem anxious to buy as they see no reason to expect an advance in any of the staple lines and are themselves doing an exceedingly small trade. The outlook, however, is not discouraging. February is generally a dull month and a good Spring trade is anticipated this year. Prices are steady and while there may be few advances there seems to be small reason to expect a decline. No changes are reported this week.

Screen Wire Cloth—Orders continue fair at $1.50 per 100 square feet.

Spring Hinges—A fair business is reported. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—A fair trade is doing. Prices are steady as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11. $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—There is not much moving, but a few orders for later delivery are coming forward. Our quotations are as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The market is steady. A fair trade is doing. We quot the following prices: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire Nails—A moderately good trade is doing with prices firm; $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—Not much doing. Prices are now steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A small demand for Spring delivery. Prices show no change. We again quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—The market is quiet. We still quote discounts as follows:

at which their goods may be sold to the trade and asking the co-operation of all the trade in keeping prices up to the basis arranged. This step has been taken at the instance of the Canadian Wholesale Hardware Association and affects the trade only as far West as the boundary between Ontario and Manitoba.

Building Paper—The market is reported dull by manufacturers, but jobbers are fairly busy. Prices are steady. Our quotations are as follows: Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—Prices are 15 to 25c. lower. A fair demand is reported but this product is particularly affected by the freight blockade. We quote in small quantities: Canadian Portland, $1.90 to $2.25; American Portland $2 to $2.10 f.o.b. Toronto.

Firebricks—The market in firebricks continues quiet, with English and Scotch each at 28 to 35c.

PLUMBING GOODS.

Trade in plumbing goods is beginning to brighten, and although the market cannot yet be said to be brisk, prospects are excellent if the large number of enquiries from probable buyers is to be taken as any criterion. A decided improvement in the market for brass goods cannot be expected until navigation opens.

Lead Pipe—Trade in lead pipe is quiet. Our quotations are: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—Business continues fair. We quote the following prices: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Trade in iron pipe fittings is steady but quiet. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade is satisfactory for this season of the year. Discounts at 15 per cent. continue.

Brass Goods—Prices in steamfitters' brass goods are steady and trade fair.

Iron Pipe—Iron pipe is steady this week with fair demand. Last week's discounts continue unchanged. We quote f.o.b. Toronto: 1-8-inch, $2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch, $11.05; 2 1-2-inch $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

METALS.

Business from stock has been more active than might be expected in the face of the serious transportation difficulties. Manufacturers, owing to the comparative weakness of the market, have been as a rule buying only up to the present needs and so have not stocks to last through a prolonged snow blockade. Consequently there is a fairly good trade. Import business, particularly in black sheets and copper, is improving.

Pig Iron—The market is steady and the demand is keeping up well. Our quotations are $18.50 for No. 1 and $18 for No. 2 f.o.b. Toronto. Prices at Midland are $1.50 lower.

Bar Iron—A fair business is reported with prices nominally unchanged. Our quotations are as follows: $1.80 f.c.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Orders for import are coming in freely, with prices steady. We quote as follows: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—Business keeps fairly active. Prices are unchanged. We quote the following prices: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A fair trade is doing. Prices at both New York and London are slightly lower. Locally there is no change, the quotations being 30 to 30 1-2c.

Galvanized Sheets—A good demand is reported at firm prices. We quote as follows: Queen's Head, $4.25 for 28 gauge; American, $4 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—Prices are steady, with a fair demand. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—Both ingot and sheet are in excellent demand for import. Prices are stronger and there is more confidence as to the future. We quote as follows: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—The market keeps firm both locally and at primary points. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—The volume of business is not large. Prices keep strong on foreign markets, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing in smal lots. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Antimony—8c. per lb.

Hides, Skins and Wool.

There is a fair demand for these goods this week. Lamb and sheepskins have risen from 5 to 10c., being now 95c. to $1. No other changes are noted. We quote:

HIDES.

TORONTO MONTREAL WINNIPEG

BUSINESS CONDITIONS IN NOVA SCOTIA.

By Regular Correspondent of HARDWARE AND METAL.

THERE is not much change in trade conditions. Country business is practically stagnant as the roads are in such bad condition for travelling that farmers and others seldom come to the centres for trading purposes. Some retailers say they might about as well close their stores for a time and save expenses, so little business are they doing. Lumbermen who seldom get enough snow in this province are complaining that they now have too much and that they could haul larger loads if the roads were absolutely bare. Under these conditions it is only natural that merchants should not be in the mood for placing heavy forward orders, but still travellers are packing considerable business for later delivery.

* * *

So far as markets are concerned there have been no local changes during the past week. There is a weaker feeling in turpentine but the price here is unchanged. There is some activity in paints and sales for Spring have been above the average. The formation of a provincial hockey league has created a great interest in this sport throughout Nova Scotia, which of course has resulted in somewhat larger sales of hockey goods than usual during the Winter.

* * *

The death occurred yesterday at Dartmouth of Mr. Peter Douglas, who was connected with the hardware trade for many years. At first he was in the employ of Symonds & Company, of Dartmouth, and later in partnership with a Mr. Thompson carried on a foundry business in Halifax. On the dissolution of the firm he removed to Dartmouth and until his death operated a foundry there under the name of Douglas & Co.

* * *

The stove and tinware business at present is very quiet. The Halifax foundries are kept going but orders come along slowly. Supplementary letters patent have been issued to the Enterprise Foundry Company, of Sackville, increasing the capital stock to one hundred thousand dollars. Letters patent have also been issued to the Charles Fawcett Manufacturing Company, Limited, of Sackville.

* * *

Some time ago the town of Sydney Mines, where a large portion of the works of the Nova Scotia Iron & Steel Company is located, decided that a change of name would be desirable in order that the place might be better distinguished from Sydney and North Sydney, in the same district. A reward of $5 was offered for a suitable name and 115 names were submitted. By the casting vote of the mayor, "Stahlburg," the German equivalent for "non city" was decided upon. The new name will have to be ratified by act of legislature and a petition of the citizens is being largely signed in opposition thereto. It is contended that there are names in plenty in the local historical associations that might be adopted without drawing upon a cognomen "Made in Germany."

BUSINESS CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL,
Room 208, McIntyre Block.
Winnipeg, Feburuary 15, 1904.

BUSINESS steady and prices unchanged in all lines is again the record for the week among hardware and paint and oil jobbers. A good many visits have been received from country merchants in the city for the curling. Binder twine is once more beginning to be a subject of conversation in the trade but there is no movement yet and nothing definite to quote in regard to prices.

* * *

The Anchor Wire Fence Company (Mr. McClay, manager), have just moved their premises to the south 40 feet of Campbell Bros. & Wilson's new warehouse on Princess street. This has more than doubled their space the change being necessitated by largely increased business.

David Philip, manufacturers' agent for various lines of furnaces and other hardware supplies and general agent for the West for the Remington typewriter, is greatly enlarging his connection at the present time. Mr. Philip is one of the best known business men in Winnipeg and although it is only a few years since he took up the business of manufacturers' agent he has already a very large connection.

* * *

Mr. McKenzie, manager in Winnipeg for the McLaughlin Carriage Co., has just sold out his implement and carriage business in Manitou to Mr. Barrett of Mowbray. Mr. McKenzie had worked up one of the finest local trade connections in these lines in the West before leaving Manitou, and although he has represented the McLaughlin's in Winnipeg for three years he retained his Manitou business until last week.

* * *

The annual meeting of the Western Implement Dealers' Association was held in Brandon last week. The meeting was a representative one and a great deal of important business was transacted.

Mixed Paints

are invited to correspond with us before buying their spring stock. While "Elephant Paint" is now better known to the consumers in the Northwest than any other, we propose to advertise it in a manner that will sell the goods for our customers, of which we can convince you by letter.

They are prepared in 43 selected shades, together with Outside and Inside White and Black. Guaranteed to give perfect satisfaction; will not crack, flake or chalk off.

We claim them to be unequalled by any paints in the market for beauty and durability.

TRADE CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

SEVERAL very heavy sales of timber lands have been reported during the past week. One of the largest individual holders of timber lands on the coast, Mr. J. C. Keith, is negotiating a sale of his holdings to a syndicate of Scottish and English capitalists. The deal, if consummated, involves a sum of large dimensions, supposed to be $300,000. Mr. Keith is also a stockholder in the Urquhart mills on False creek in this city.

Another sale is that of a large area of choice timber lands in the northern coast district, owned by McLean Bros., and held under a very favorable lease, in fact the last lease secured under the old land regulations, which have been abrogated by the bill just passed at the session of Legislature now going on. This sale is also well up in six figures, though not of the size the other will be. The indications are that timber lands and the manufacture of lumber will be two attractive subjects for capital seeking investment during the next year.

* * *

Mr. G. O. Buchanan, of Kalso, has been deputized by the Dominion Government to attend to all the business in connection with the distribution of the lead bonus. He has received blank forms and full instructions. Claims are to be made under the regulations from July 1, 1903, and may include all amounts produced up to the end of any month. The payment will put a considerable amount of money into the hands of the mine operators who have been producing lead in the Kootenays.

* * *

Efforts to get a well bored in the Stevenson gas field are being pressed vigorously. The well is now down several hundred feet and prospects of striking a good flow of natural gas increase.

* * *

The Blue Funnel steamer Tydeus, of the China Mutual line, has reached port from Victoria where she first discharged a quantity of cargo. She has 800 tons, principally hardware and meals, for wholesale importers of this city. One of the principal items of the cargo is bar iron, of which there are about 4,000 bars and bundles. Galvanized sheets, corrugated and plan are largely represented, as well as steel wire rope, bar steel and steel plates. There was also a fairly large quantitl of tinplate and a small lot of Canada galvanized plates. The tinplate will begin to arrive in larger quantities by later vessels; 1,240 steel rails was another item of the cargo of the Tydeus, to be discharged here. She takes out a large consignment of lumber and several thousand cases of canned salmon for the British market.

* * *

In the hardware markets there is considerable activity at the present moment. Inquiry is brisk for staples such as bar steel and iron. In prices there is not much movement locally. In sympathy with the British market the price of pig iron is very low. In fact the British markets are low all round and falling as a result of low markets in the United States. Tinplates are quoted a little stiffer in price owing to rush orders. Bar iron and steel show no change. Steel plates are a trifle lower.

English boiled linseed oil which has not been imported for the past year is now so low in the British market that it is likely there will be some importations to this market again before long.

* * *

Metal merchants had a tussle this week for the annual contract to supply galvanized two-inch and half-inch iron pipe for the city waterworks. The requirements are about 10,000 feet of 2-inch and 25,000 feet of half-inch, with proportionate quantity of fittings. On this basis four tenders were handed in, each totalling $3,162.25, being lump sum for the amounts specified by the city engineer.

* * *

Northern business is fairly satisfactory to some of the wholesale hardware men, who have been finding a good deal of unexpected trade from the demands being made for supplies for mining outfits going into the northern fields below White Horse. The expectation of a good season's trade, through this rush from White Horse increases as the time goes on. News from the district is constantly being received and it is confidently predicted that returns will cause great excitement when there is a clean-up. There are many men now in and all are getting out some gravel for a dump to be ready to wash when Spring opens. Continued reports of good returns from prospecting are received by every mail from the north. There are many people now in the new district and a gentleman recently returned from White Horse says there are 30 or 40 men

leaving there every day with outfits. Not a team of horses fit for freighting but is on the trail to the new field.

* * *

A big saw mill is to be erected at One Mile Point near Nelson very shortly, every arrangement having been made. The mill will employ 100 hands and wharves and railway spurs to accommodate the trade will be built.

* * *

The C.P.R. is fitting its shops at Nelson, which are to be much enlarged also, with machinery from Germany enabling it to take the wheels of cars and locomotives and re-turn them. A larger number of men will be employed at the shops when the increase is effected.

* * *

Three more Blue Funnel steamers will reach this port from Liverpool, one, the Ping Suey, being due at the end of the month, another, the Ning-Chow, sailed on the 6th inst., from Liverpool, and the Hyson sails on March 10th. Each of the steamers brings large consignments of rolled steel, iron, sheet metals and other hardware for local importers.

* * *

Freight rates on cargo coming here from the Orient are likely to meet with sharp advances, though none have yet been announced. It is said the Blue Funnel line will put into effect a 10 per cent. advance on all cargo coming even from Liverpool, by way of the Orient. The rates of marine insurance have been increased a quarter of one per cent.

* * *

Lumbermen are very much interested in the conference which is being carried on in Winnipeg between manufacturers from this province, dealers in Manitoba and Northwest Territories and the C.P.R. with the purpose of adjusting satisfactorily the differences which have arisen. It is the argument of the lumbermen that the railway should co-operate with them to give the dealers such a rate that it would successfully shut out competition from mills in Washington and other states.

* * *

Owing to the snow blockade in the mountain section there is a very great falling off in freight receipts, so much so that the local wholesale men are finding it difficult to fill orders in some lines. Very little through freight from the east has been received in the past ten days or two weeks.

* * *

The lumber mills operated within the city of Vancouver are asking for a concession in water rates paid the city, claiming that it is one of the "little leaks" which will have to be stopped if they have to cut down the price of lumber. The rates paid at present are somewhat higher than in other coast cities. It runs from $1.28 to 72c. per thousand cubic feet for a consumption of 30,000 to 100,000 cubic feet per month. It is likely that the city will reduce the rates somewhat.

Vancouver, Feb. 12, 1904.

PITTSBURG METAL MARKETS.

SPECIFICATIONS and new business in the lighter lines of finished steel products have not been as heavy this week as during the same period earlier this month. This no doubt is largely accounted for by the fact that much material ordered in January has not yet been delivered, owing to the freight congestion, which is growing worse daily due to the severe weather. Until this material is delivered and consumed it is hardly probable that the specifications and buying movement will reach the volume attained earlier in the year. Of course consumers are buying to cover immediate requirements and this insures further business as soon as material in transit has been delivered and consumed. The mills in this district find much difficulty in securing cars for the shipment of finished steel products, while in the coke region the producers secure only a small proportion of the box cars required for foundry coke.

Pig Iron—The pig iron market remains quiet and business is almost entirely limited to small lots. Sales of several lots of Bessemer iron aggregating 3,000 tons have been made at $12.75 to $13, Valley furnace. Forge iron is held at $12.75 to $13, Pittsburg, while No. 2 foundry ranges from $12.85 to $13.35.

Pipes and Tubes—The volume of business that is being taken by both independents and the largest producer is very heavy and most of the pipe mills are operating at their utmost capacity. Discounts to consumers, carload lots, f.o.b. Pittsburg, plus freight to destination according to Tube Rate Book, are unchanged.

Coke—Much difficulty is being experienced by coke shippers in securing box cars for the movement of foundry coke. The railroads claim that the cars are tied up owing to the slow movement of freight due to the severe weather. The shipment of furnace coke is not being interfered with, however, as sufficient cars for its movement are furnished the shippers. On strictly Connellsville furnace coke as low as $1.45 has been done during the week, and several large coke producers have decided to fire no more ovens until the market stiffens up. On strictly Connellsville foundry coke $2.15 to consumers seems to be the minimum, while $2 is done to jobbers. As high as $2.50 is paid, however, for particular grades of Connellsville coke, and in a few instances slightly higher prices have prevailed.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

PAINT, OIL AND BRUSH TRADES

EXHIBITS AT THE PAINTERS' CONVENTION

WHILE hardwaremen were not interested in the practical discussions at the convention of the National Association of House Painters and Decorators of the United States, they were interested in displays of paint materials, for not only do they get information regarding new lines offered for sale but they get suggestions for paint displays in their own stores.

The exhibits of manufacturers at this convention were in many respects representative.

In some quarters there is a feeling that these exhibitions are superfluous, that members are supposed to know their business and to know all about what is current in the trade, without having it brought to their notice in this way. Such an attitude is unquestionably a mistake, as there is no doubt that a man with an enquiring mind attending one of these conventions would find in these exhibitions of manufacturers a great deal that is new to him, and that he as a professional painter ought to know and understand—for an hour spent at an exhibition of this kind will probable give a man more ioformation than he can acquire in the ordinary way in a number of years. The Canadian manufacturers are to be congratulated on their enterprise in making such impressive displays as they had.

The Canada Paint Co. had their display right at the entrance to the largest exhibition room. They showed a full line of their manufactures in dry colors, colors in oil and colors in japans and varnishes. A most effective way of appealing to the decorator was a series of panels calculated to excite the envy of all good painters because of the exquisite surfaces obtained. This style of demonstrating the value of high-class colors and varnishes is unquestionably strong, influencing every painter of discretion. The Canada Paint Co. rest their reputation upon the beauty and fineness of their colors. Many expressions of surprise were heard from American delegates at the excellence of these colors, they evidently not thinking that such materials were produced in Canada.

The exhibit was surmounted by a large Canadian flag, over which was a motto in gold letters on a white ground—"We Follow the Flag"—which seemed appropriate as this company export largely to the Motherland and the colonies. Mr. Harry Clucas, the Toronto sales manager of the company, was in charge of the display.

The Sherwin-Williams Co., held their display in one of the busiest corners of the convention rooms. The exhibit was arranged most artistically, and with a view to the entertainment of visitors as well as the display of their wares. A typewriter was in constant attendance and her services were highly appreciated the many painters who sought her aid. The accompanying view of the exhibit will obviate the necessity of further description of it. The Sherwin-Williams Co. make a feature of their advertising literature. The central point in their display constituted four panels showing the beautiful results obtained from their enamel system. The influence of this was strengthened by the presentation to every visitor of a small booklet giving complete specifications for enamel finish on old and new woodwork and plaster and brick walls. Two smaller booklets, one relating to "Excello" their varnish leader for inside use, the other to "Kopal," their varnish for general use, were also secured by practically all visitors. The firm's representatives present were C. C. Ballan-

The Sherwin-Williams Display.

tyne, Canadian manager; L. J. Fasquelle, manager of the varnish sales department, Toronto manager; R. C. Muson and H. C. Lavery, district representatives.

Among the exhibits of the large American and English firms none looked better and no where was a more cordial welcome given, or a more cheerful explanation offered of articles exhibited, than at the quarters occupied by Faircloth & Co., of Toronto.

They had a fine exhibition of art and stained glass which goods lends themselves so well to a more gorgeous and pleasing display than stained glass.

The object of a convention is usually to show the new developments that have taken place and the improvement made by the manufacturers in the various articels they put on the market.

The most striking improvement and invention shown by the Faircloth Co. is that of electro (glased) work. Formerly the glass was merely held together by lead. This required a number of bars to hold the glass firm.

With the new electro glased work no bars are used, great strength is obtained, moreover, it adds immensely to the appearance and nothing to the price.

The firm was well represented by Mr. G. A. Pringle.

Pilkington Bros. had a very fine display of the various kinds of glass they handle.

As a souvenir and to show the merits of their mirror plates they gave away small plate glass mirrors about 8x6.

One of the most interesting demonstrations at the whole convention was the wheel-cutting which was demonstrated and fully explained. Although adding considerably to the cost of the glass this process adds immensely to the appearance and to anyone wishing the best the difference in price would seem small. This firm had a piece of wired glass; to show the value of this a piece was broken with a hammer. Although the glass was broken it did not fall to pieces. The advantage of this is that it is fireproof and burglar proof. This firm are large dealers in all kinds of window glass, also prismatic glass in which connection they issue a circular showing some cuts. This circular will be sent to anyone interested on application.

The firm was well represented at the convention. Mr. Shaw, Mr. Curran and Mr. Fidler being present.

John Lucas & Co., Philadelphia, made an attractive show-room of their display. The distribution of literature was, with them, an important feature. Possibly no other book given out was in greater demand than a large book with full-page illustrations showing the beauties of the city of Philadelphia. They also had a four-page leaflet containing references to "Mirac," a varnish and paint remover. Several enthusiastic recommendations of the remover are given.

One of the most attractive exhibits was that of Harrison Bros. & Company, Philadelphia. This firm make utility products, especially colors ground in oil, which for many years have been a standard in the United States. They also manufacture enamels and protective paints. The latest novelty to be introduced to the trade by Harrison Bros. & Co. is "Antoxide" paint, which they claim acts on iron and steel as a preservative. "Antoxide" paint has been used on the United States Capitol at Washington and other important structures. This firm gave out in large numbers their color strength charts, to show the power of Harrison's colors in oil. One pound of oil is mixed with one hundred pounds or even a ton of white lead to produce light tints.

Berry Bros., Walkerville, made a reception room of their exhibit, and their representative, Mr. William Home, spent his time in valuable educational work. Particular attention was paid to the distribution of literature relating to the varnishes, japans, etc. Two valuable booklets were distributed. One of these was a treatise "Natural Woods—How to Finish Them"; the other a comprehensive and beautifully illustrated work descriptive of their varnishes and japans. The books were in great demand and should be secured by all the trade.

The Canada Glass Works Co., Limited, capitalized at $500,000, have placed a proposition before the city council of Sydney, N. S., which states that the company will locate their works there on condition that the council grant them permanent exemption from taxation on buildings, 20 years exemption on land, after which the assessed value is to be $50,000, a bonus of $50,000 and water for use in the manufacture of the glass at $1,000 a year. A special committee has been appointed, and will report.

One's Veracity

is sometimes questioned when goods recommended turn out badly. Avoid any possibility of this in your paint department by selling

Hollywood Paste Paint,

Hollywood Ready-Mixed Paint

and Hollywood Floor Paints.

The paints with quality to back up your strongest claim for them. They wear on the job, not off it.

AGENTS FOR ASPINALL'S ENAMEL.

That's good advice

to give to any paint customer, because **"ARK" BRAND** is a thoroughly reliable paint and gives perfect satisfaction.

USE ARK BRAND

Dealers will find it a most profitable line to carry, and can guarantee it to give better satisfaction than any other paint made.

Read the experience of a fellow dealer:

Messrs. The Francis-Frost Co., Limited, Toronto. Little Britain, Jan. 6, 1904.

Gentlemen,—I have pleasure in advising you that your "Ark Brand" Paints have given universal satisfaction and have proved the best of any brand I have yet handled.

I was particular when I first handled "Ark Brand" to ask my customers if they had any complaints as I wanted to ascertain the quality of the paint, but I received no complaints that could be laid to the fault of the paint.

Hoping that you may continue to put up as good an article as you have in the past, that I may have no hesitation in continuing to recommend it.

I am, yours truly, E. J. YEREX.

If you will take up "Ark" Brand Paints, you will also find it the best line you ever handled.

Write us to-day for information as to how we help the dealer to push "Ark" Brand.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, February 17, 1904

THE turpentine market continues its erratic course. The price changes are full of surprises which are pleasant or otherwise according as you are long or short of the market. Just now, owing to transportation difficulties the market is exceedingly firm at an advance over last week's prices. At the same time, the demand is not great as the factories are not very busy, being handicapped by lack of coal and the inability of the railroads to deliver their manufactured products. Linseed oil remains steady at former quotations. As terms of payment for turpentine and linseeed oil are not now uniform reference to them is removed from our quotations below. It is still difficult if not impossible to make deliveries to country points and the travellers are also handicapped in their movements. Nevertheless mail orders are coming in satisfactorily and with the near approach of March the paint trade has received a tremendous impetus. Orders are coming in freely for all classes of painting and decorating materials. Some houses are confining their energies to the finished products having refused to follow the market in white lead. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Turpentine—Single barrels 95 1-4c.; 2 to 4 barrels, 94 1-4c. Standard gallon of 8.6 pounds.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, February 17, 1904.

Despite a general confidence that there will be a big trade in paints this Spring there is not much doing. Prices are easy in most lines, competition being decidedly keen. White lead is 10 to 25c. lower. Red lead also shows a material decline. Turpentine is rather stronger while linseed oil is 2c. lower. Paris green is still 1c. below manufacturers' quotations which are given.

White Lead—Ex-Toronto, pure white lead, $4.50 to $4.65; No. 1, $4.05 to $4.20; No. 2, $3.75 to $3.90; No. 3, $3.35 to $3.50; No. 4, $3.25 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.75.

Red Lead—Genuine, in casks of 560 lb., $4.25; ditto, in kegs of 100 lb., $4.50; No. 1, in casks of 560 lb. $3.75.

Litharge—Genuine, 6 to 6 1-2c.

White Zinc—Genuine, French V.M., ditto, in kegs of 100 lb., $4.25.
in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75 to 80c.

Shellac—Pure orange, in barrels $2.45; white, $2.60 per gallon; No. 1, including price of can.

MARBLEINE

Wall tints produce a smooth hard surface that will not rub off. It is a disinfectant, is easily prepared in five minutes, and will keep its color for years.

Marbleine is made in twelve beautiful shades, and pure white, neatly put up in five lb. packages.

HENDERSON & POTTS CO., Limited, Montreal.

A Word to Hardware and Paint Dealers.

A writer in one of the leading trade papers states it about right when he says: "There is no loss which is more serious, more discouraging than the loss ensuing from unsalable goods, or from the sale of goods which are so inferior as to annoy and even drive away customers buying them."

That is one point we have been trying for years to impress on the minds of Canadian Hardware and Paint Dealers, and yet occasionally a dealer is pursuaded to stock goods that have no record of merit nor proof of origin, and for which there is absolutely no call. Why do this, when

Church's Cold Water

ALABASTINE

so well and favorably known, and for which there is a large and growing demand, can be had from all hardware and paint jobbers, and at a price that affords a fair margin of profit? No danger of loss on account of unsalable goods when you stock ALABASTINE. The sale of it to a customer is an invitation to come again, and the results of the purchase are so pleasing that it establishes in the mind of such customer THAT YOURS IS THE PLACE to buy goods that are all right.

Plain talk to practical people, but do not our statements conform to your experience? Stock ALABASTINE -We help you to sell it!

WINDOW GLASS.

MONTREAL.

There is not much activity at present although prices remain at the extremely low figures which have prevailed for some time. There is no money for the jobbers at present prices and some houses have refused to follow the market. We quote as follows: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

Import orders are generous but there is nothing doing from stock. Our quotations are as follows: Starr, under 26 in., $3.10; 26 to 40 in., $3.30; 41 to 50 in., $3.70; 51 to 60 in., $4; 61 to 70 in., $5; 71 to 80 in., $4.30 net, Toronto, Hamilton and London.

THE GERMAN SURTAX.

THE real effect of the German surtax is still being discussed by importers and business men in general. The Canadian agents of H. Boker & Co., the German cutlery manufacturers, were seen by a Hardware and Metal representative this week. They say that a number of misrepresentations are being made to the trade as to the real state of affairs. "There seems to be an idea prevailing," said a member of the firm, "that the surtax which the Canadian Government put on German goods is now being entirely borne by the German manufacturer.

"This may be true in a few instances, but on the bulk of the goods imported from Germany it is not so. The German manufactured goods coming into this market for the hardware trade are, in nearly all cases, identified with Germany and are of different designs and patterns from those of other nationalities. Besides this, where designs and patterns correspond with the goods made in other countries, the price of the German goods are generally away below those of their competitors and hence neither the preference nor the surtax has any effect upon the sales. The competition amongst the different German manufacturers is so keen that the prices of the goods are down almost to the cost of manufacture. This is the case in nearly all the small hardware and cutlery. To reduce the price to the extent of the surtax would, in many instances, be to sell at a loss.

"There are some lines of hardware in which the German manufacturers come into keen competition with the American as well as the English makers, and on these lines, rather than lose the market, the Germans have reduced the prices to overcome the surtax. But in nearly all cases the reduction has been made only for the time being while the surtax is on, and should the surtax be taken off, the German manufacturers will again ask for the same prices as were charged previous to the imposition of the surtax.

"I do not believe that of the full line of hardware and cutlery imported from Germany into Canada, 5 per cent. is affected by competition from other countries than Germany. Hence I believe that the surtax will have to be paid on 95 per cent. of all the goods imported from Germany for the hardware trade. Perhaps on 5 per cent. of the imports the surtax is borne by the German manufacturer. I am not sure that it is borne by him on so much as 5 per cent."

STOVES AND TINWARE.

THE C.I.F. DECISION.

"I THINK your court decision in of c.i.f. terms is quite wrong," Eastern Canada on the subject said Mr. Colin F. Jackson, a prominent importer and shipper, to the Vancouver representative of Hardware and Metal. Mr. Jackson has just returned from England and in looking over his copy of Hardware and Metal had noted the reference in several numbers to the matter of liability in c.i.f sales.

"It is the clear practice in c.i.f sales," asserted Mr. Jackson, "that delivery is taken at the time of purchase of goods. All risks after that are taken by the purchaser. The only obligation upon the vendor of the goods is to ship the goods and to insure in the usual way. With rough and heavy goods, such as wire, galvanized sheets, bar iron, salt, cement, etc., the usual way is to insure all goods, f.p.a (free of particular average).

"I think you will find," continued Mr. Jackson, "the insurance companies will not insure against all risks with such classes of goods. If they do it would be at a prohibitive or fancy rate of insurance, outside of usual insurance I have been engaged in shipping for a long time and have had such cases more than once. In every case the insurance company would not accept the whole risk.

"There is an error in the statement that the recent decision of the Candian court creates a precedent. There are, I know, precedents in cases in English courts where decisions have been rendered. These decisions if you look them up, will be found to be exactly the reverse of that given by the Candian court.

"The vendor of the good secured insurance in the usual form, and that insurance was virtually accepted by the purchaser. It was on f.p.a terms, and when the insurance company was thus free from the payment of damages sustained other than by reason of the ship being 'sunk, stranded or burned,' there was no recourse to the vendor, whose liability was off by the c.i.f. terms of the sale.

"Why," was Mr. Jackson's declaration in concluding his interesting remarks on the case, "if this decision is upheld it will simply prevent all c.i.f sales in future."

Have Been Incorporated.

Onatrio Lantern & Lamp Co., Limited, is the name of the new company which is taking over the manufacturing business of the Ontario Lantern Company. The officers are: Walter Grose, president; W. A. Fawcett, secretary-treasurer; W. H. Ginder, superintendent. The latter gentleman has had several years experience in two of the largest American factories in these lines of goods. The new company are adding some modern machinery to their already extensive plant and will make many new lines of staple goods in connection with electrical supplies, such as lamp sockets, shade rings, and illuminating incandescent lamps, in addition to the Radiant, Shelby and Brilliant Lamps, which they have been manufacturing for the past three years. Mr. Walter Grose will continue to market the output of this company and will carry a stock of the different lines of goods, which they produce in Montreal.

Enlarging Their Plant.

The Guelph Foundry Co., of Guleph, Ont., are putting up a new factory and warehouse. The building will be of brick, 4 storeys, 40x100 feet. Last Fall they built a new foundry 174x58. It is expected the new building will be completed in about four weeks.

They have installed a complete firnace tinsmithing outfit. They will manufacture caseings and fittings. This will enable hardware merchants to install furnaces who have not a tinsmithing plant of their own.

They are also bringing out a new high-class range this year, "The Grand Ideal." This will be made in all sizes and will be ready in about a week. With their increased space and the excellent machinery they installed last Fall the company will now be able to insure prompt delivery.

Many Towns Snowbound.

A. J. Ross, plumber and hardware merchant, Owen Sound, Ont., spent several days in Toronto this week. Mr. Ross was snowbound for two days while on his way to Toronto. Railroad traffic in the Georgian Bay district is demoralized with the consequence that business is at a standstill. A few days ago the Owen Sound merchants ran out of oil supplies and the citizens were reduced to the dire necessity of using candles. There is plenty of coal in the town although wood is at a premium, having reached a record price of $12 per cord within the last few days. On February 18 the limit was reached when railroads running out of Owen Sound refused to handle freight. Mr. Ross, who is agent for the Gurney heating goods, expects an active business in the Spring.

HEATING AND PLUMBING

Iron Pipe at Vancouver.

The Vancouver correspondent of Hardware and Metal writes: "In discussion in the Board of Works the fact was made prominent that a large shipment of galvanized iron pipe was last year not nearly up to the desired mark as to quality. Some fifty lengths had been found to be split and useless, from defects in manufacture. The contracting firm had made this good, however. But the Board of Works laid the tenders over until the character of the goods proposed to be supplied this year was carefully looked into. The statement made was that last year such iron pipe had been hard to get and the firms tendering had to take pipe of Canadian manufacture. The pipe complained of was stated to be Canadian make, although one of the firms tendering this year offers Canadian pipe and will guarantee it."

Building in Vancouver.

With stormy weather and soft snow falling for the past week, the activity of building in Vancouver has been much lessened. There is, however, a decided change in the weather, and the temporary Winter inconvenience is over. The building inspector announces double the value in permits issued for January, 1904, as compared with January, 1903. There were no permits for blocks issued last month, all being for residential property. The total was $85,000.

Fireproof Structures.

In referring to the above the Chicago Inter-Ocean has the following about fireproof structures: "Our fire department knows that structures that are of themselves absolutely fireproof, capable of resisitng the fiercest heat, can be built, and many of the modern structures here are of that character. They know that the so-called fireproof structure is in danger only from inflammable material housed within its walls."

Building Outlook in Winnipeg.

The outlook for building in Winnipeg is very good and at the present time architects' offices are working steadily on plans for new buildings and quite a few contracts have already been let, more especially for houses. There is every intention among the people who desire new buildings and the contractors to be ready for the first fine weather to get to work. Never was there a Winter when work on buildings went on so continuously as it has done this present Winter. There were so large a number of buildings just closed in when snow came and carpenters and iron workers have been kept busy all Winter finishing the interior of these buildings and some of them will not be more than completed when Spring opens.

Meeting of Shareholders.

The annual meeting of the shareholders of the Montreal Rolling Mills Company was held in Montreal at noon on Monday, February 15th. Reports submitted to the meeting showed that 1903 was a prosperous year with this company. The following board of directors was elected for the ensuing year: E. S. Clouston, Senator George A. Drummond, William McMaster, Senator Robert Mackay, James Ross, J. S. McLennan, H. Montagu Allan, and James L. Waldie, secretary.

At a subsequent meeting of the directors, Mr. E. S. Clouston was elected president and Mr. William McMaster, vice-president and general manager.

IRON AND STEEL HOCKEY LEAGUE

THE ninth game of Iron and Steel league series, of Montreal, was played on the night of February 10th, at the Victoria rink. Thos. Robertson & Co.—the invincibles—won a victory from Drummond, McCall & Co., by a score of 3 to 0. The teams were:

T. R. & Co.: E. Bouchard, goal; P. Danberry, point; H. D. Browne (captain), cover point; H. Orsali, centre; J. Bedbrooke, right wing; T. R. Lessard, left wing; F. Robertson, rover.

D., Mc. & Co.: J. Gouldthorpe, goal; K. Audras (captain), point; R. Tait, cover; G. A. Irwin, centre; H. Wilkinson, right wing; L. Martel, left wing; A. Brophy, rover.

Timekeepers: W. E. Soden, J. Briggs, and M. C. Waters.

Umpires: F. Fields and T. B. Reed.

Referee: W. Papineau.

The following night teams representing Jas. Robertson Co. and Williams & Wilson, met at the Victoria rink, the former coming off victorious after a hard struggle. The result of the game was in doubt until almost the last minute of play, when the victors put in a third goal, making things safe. The final score was 3 to 1 in their favor.

The standing of the league at the close of the tenth game was therefore as follows:

	Won	Lost	To Pl'y
Thomas Robertson & Co	5	0	1
Jas. Robertson Co	3	1	2
Drummond, McCall & Co	1	4	1
Williams & Wilson	1	5	0

Building Permits Issued.

Building Permits Issued.

Toronto.

Mrs. J. S. Graydon, a two storey and attic brick and stone dwelling on Huron street, to cost $1,000.

E. Ocklev, a pair of semi-detached two storey brick dwellings on Lansdowne avenue, to cost $4,500.

W. G. Muntz, a pair of semi-detached two storey brick dwellings on Concord avenue, to cost $3,000.

Mr. S. J. Graydon, a pair to two storey and attic brick dwellings on Huron street, to cost $7,000.

Geo. Wallis, a two storey and mansard addition to store and dwelling on College street, to cost $2,000.

Joseph L. Montgomery, three attached two storey and attic brick and stone dwellings on Euclid avenue, to cost $8,000.

Building Notes.

It is said that building operations have been continued all through the winter in Calgary, and that they are now going on.

Chadwick & Beckett, architects, Toronto, have taken a contract for erecting a store for W. C. Lee at the corner of Lee avenue and Queen street, Toronto.

The Hudson's Bay Co. are about to erect a three story stone and brick store at Edmonton. John Woodman, 27 Merchants' Bank Building, Winnipeg, is the architect.

Isaac Usher, of the Queenston Cement Works, Toronto, says that the most notable increase in enquiries for cement during the past year came from those interested in house building.

A brick veneer public school is to be built in Reston, Man., this Spring. C. J. Stewart, secretary of the school board, is now calling for tenders, which will be received until March 15.

A House of Refuge is to be built at Lindsay, Victoria County, Ont. Tenders are now being called by the architects, G. M. Miller & Co., 59 Yonge street, Toronto, and will be received up to February 27.

Plumbing and Heating Notes.

Bennett & Wright, plumbers, Toronto, have taken a contract for plumbing in the steamer Majestic of the Collingwood Shipbuilding Company.

Keith & Fitzsimmons, plumbers, Toronto, have about completed repairs to their factory which was so badly damaged by fire on February 8.

Tenders are being called for extensive plumbing and heating in the new buildings to be erected for St. Andrew's college.

The game of hockey to have been played between the James Morrison Brass Mfg. Co., Toronto, and the Western Assurance Co., Toronto, on Tuesday, February 16, was given to the former team by default.

A meeting of the executive of the Provincial Association of Master Plumbers was announced for February 18, to make arrangements for the convention to be held in Hamilton on April 1. Hardware and Metal hopes to publish fuller particulars of the convention in its next issue.

In last week's issue of Hardware and Metal two items appeared in which the James Robertson Brass Mfg. Co., Toronto, were given credit for having taken a contract for supplying engine sets to the Waterous Engine Works, Brantford; also for having defeated the R. S. Williams & Sons Co. and the Manufacturers' Life Insurance Co. at hockey. The items should have read the James Morrison Brass Mfg. Co., instead of the James Robertson Brass Mfg. Co.

Light your way to splendid profits by carrying the "Morrison" Gas Arc Light. It gives more light at a smaller cost than any arc light made.

JAMES MORRISON BRASS MFG. CO.

Officers of Montreal Board of Trade.

MR. GEO. E. DRUMMOND, the new president of the Montreal Board of Trade, is also the president of the Canadian Manufacturers' Association, and one of the most energetic spirits of that body. He is one of the highest authorities on the iron industry in Canada, having a thorough knowledge of that business from the

Geo. E. Drummond, President.

mining of the ore to the manufactured article, and is connected with the industry in all its branches. Mr. Drummond is a great believer in the future of Canada, and does not stop at that, but works hard toward a realization of that future.

As head of the Drummond, McCall Co., which he founded, with Mr. McCall, nearly a quarter of a century ago, he has been a foremost figure in the development of the iron industries of Canada. They were the founders of the Montreal Car Wheel Co., of which Mr. Drummond is now president. He is managing director of the Canada Iron Furnace Co., and many other large concerns owe the greatest part of their success to the management of the Board of Trade's new president.

Mr. Drummond is an Irishman by birth, but has become so thoroughly imbued with the spirit of his adopted country, that he is generally credited with a desire to see Canada make her own commercial treaties, unrestrained by any part of the Empire. He is a Conservative in politics, because he is a protectionist.

Business considerations have not and do not take up all Mr. Drummond's time. Various charitable institutions, homes for the unfortunate and hospitals have been benefited by his generosity and helped forward by his active participation in their work.

In his speech thanking the members of the board for the honor done him, Mr. Drummond said in part, that Canada was now entering upon a period in her history the importance of which could hardly be over-estimated. It behooved the business men of the Dominion to take keen interest in the country's affairs; there are too few business men in the country's parliament; too few who are conversant with what the country requires. He considered it the duty of the boards of trade of Canada to take up and move resolutely in questions which affected the country at large. Sir Wilfrid Laurier had said very truly that

Page 61

R. Munro, Second Vice President.

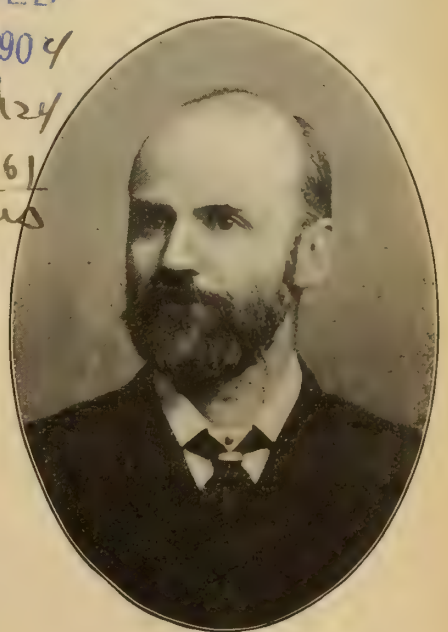
if the United States was the nation of the 19th century; then Canada should be the country of the 20th century, and it was the time and opportunity for the commercial bodies of this country to bestir themselves. In the past the voice of the Montreal Board of Trade had been heard to some effect in the councils of the nation. The Board of Trade council took up the matter of the unfair treatment which was being accorded to the Dominion by Germany, and the result was that the surtax against Germany had been put into effect.

Mr. William I. Gear was elected the first vice-president by acclamation. He is an old hand in board of trade matters, and will be found most useful in his new position. In the years 1900 and 1901 Mr. Gear was the representative of the shipping interests on the Board of Trade council, and last year was the second vice-president of the board. In 1902 he was elected president of the Corn Exchange.

Mr. Gear is a Canadian by birth. He is most favorably regarded in shipping and commercial circles, not only locally, but throughout the country with those who have had business connections with him and the shipping firm of which he is vice-president, the Robert Reford Company, one of the largest in Canada. Mr. Gear is the chairman of the Executive of Shipping Federation of Canada.

Mr. Robert Munro, who has been elected second vice-president of the Montreal Board of Trade, is no stranger to Canada. He first visited this country a number of years ago in connection with lead products manufactured by the well-known firm of Alexander, Fergusson & Co., of Glasgow, Scotland, a firm known wherever the English language is spoken. Upon the fusion of the firm of Fergusson, Alexander & Co., who were then established in Montreal, with the Canada Paint Co., in 1892, Mr. Robert Munro became managing director, and it is almost needless to say that this company under his guidance has been a success from the start.

Mr. Munro is widely known in philan-



W. I. Gear, First Vice-President.

thropic and education circles in Montreal and elsewhere, taking a special interest in the technical training of young men. He stands high in the commercial life of the metropolis, and has a patriotic desire to see the industrial world of Canada forge ahead, having been prominently connected with the Cana-

dian Manufacturers' Association for some time.

His technical knowledge of such matters as red lead, white lead, litharge and lead and zinc ores has frequently been made use of by the Dominion Government and large corporations as to his opinion of the value of galena deposits and their chemical and commercial value.

As it may be inferred from the name, Mr. Robert Munro comes from good Highland stock, the strain which has done so much for this country. He is an uncle of Neil Munro, the celebrated Scottish author, and weilds a facile literary pen himself. Being in the prime of life, it is confidently anticipated that his business knowledge and sphere of usefulness will still further be felt in the commercial world.

Mr. James Thom, who is the new treasurer of the Board of Trade, is a

James Thom, Treasurer.

very well-known business man of Montreal. He is prominently connected, and has been for some years, with Canadian trans-Atlantic shipping interests, and in Montreal steamship circles no one has a better grasp of ocean transportation affairs than he.

Mr. Thom was formerly the general manager of the Hamburg-American Packet Company and the Furness lines, and in the early days was freight manager of the Beaver Lines, which were acquired by Elder, Dempster & Co. He is now assistant general manager of the Dominion Line.

He has already served two years as the representative of the shipping interests on the council of the Board of Trade.

UNION PLANES.

THE planes and other tools manufactured by the Union Manufacturing Co., of New Britain, Conn., U. S. A., have lately received considerable attention from the Canadian trade. It is claimed for these goods that they are exceedingly well finished, and that this is a point which commends them at first sight to the dealers as well as the user. Considerable stress is also placed on the fact that the cutters used in Union Planes are extra heavy, and are made of one piece of steel.

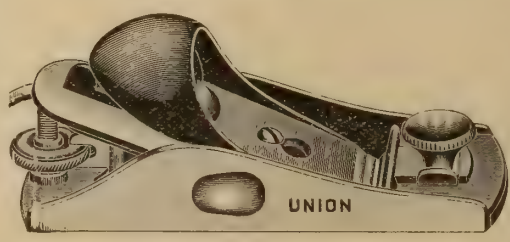
This company make quite a line of these goods, including the Smooth,

Grooved Bottom Planes.

Jack, Fore and Joiner Planes, with both iron and wood bottoms. Also a line of Block Planes, plain and adjustable from the small No. 101 for boys' tool chests, to the No. 138 with nickel-plated knuckle-joint lever. They also make Robber Planes, Scrapers, etc.

Looking at their line in detail, we note that their iron planes with handles are provided with solid mahogany handles and knobs, which greatly add to the finish and appearance of the goods; also that all of these planes are furnished with the grooved bottoms when desired, without extra cost.

Their line of block planes is complete. The No. 9½ and similar styles are furnished with the lateral adjustment for the cutter, and also with an improved throat adjustment slide, by means of which the opening for cutter may be easily closed



No. 9½ Plane.

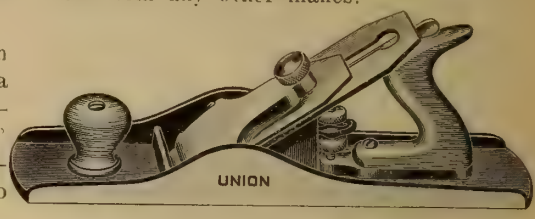
or enlarged, as desired, for fine or coarse work. The list of block planes also includes those made with lever and screw adjustment, and the block plane with double ends. Eight numbers of spoke shaves are made, including those with single and double irons.

In this new plane the cutter is raised or lowered by means of a lever, which is locked in any position by the two brass nuts above and below it.

Single Iron.

The old style of movable frog is discarded in this plane, the cutter seat being a part of the body. It is claimed that in this way absolute rigidity is secured, and that this attachment, used in connection with the heavy cutter used on all Union planes, gives an article for all around work that will stand any test. This device will also be used on wood bottom planes.

These goods are all packed in a neat, attractive style, and with a copy-righted label, which will readily distinguish them from any other makes.



New "X" Plane.

The 1904 catalogue will soon be issued, and will show several new numbers in addition to those shown in 1903.

HARDWARE HOCKEY MATCH.

Teams representing Caverhill, Learmont & Co., and Lewis Bros. & Co., of Montreal, met on the Victoria rink in that city on Thursday evening, February 11th, the former team being victorious by a score of 1 to 0. The match was keenly contested and the play of the winners was a surprise to the spectators. The teams were:

Caverhill, Learmont—Hodgson, goal; Pillow, point; Davidson, cover; Rowatt, left wing; Walker, centre; Briegel, rover; Reid, right wing; O'Dell, spare.

Lewis Bros.—Wilson, goal; Cameron, point; Dow, cover; Bonbarbier, left wing; Culverhouse, centre; Carbury, rover; Stafford, right wing.

STARKE HARDWARE CO. DAMAGED BY FIRE.

Fire broke out on Monday afternoon in the cellar of the Starke Hardware Company, St. Peter street, Montreal. It was feared that the company would suffer serious loss as smoke was pouring out in dense clouds from the windows, when the firemen arrived on the scene. Fortunately the flames were soon extinguished and the loss is not considered very serious.

BUILDING AND CONTRACTING NOTES

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

LA COMPAGNIE DE TANNERIE DE QUEBEC, LIMITED, Quebec, have been incorporated with a capital of $100,000, to carry on the business of manufacturer of and dealer in leather of all kinds. The directors are: J. F. Gourdeau, F. Gourdeau, J. E. Martineau, E. Racine, M. I. Racine, M. L. Pouliot, J. Ritchie, L. N. Bergeron, A. Racine, J. P. Morissette, all of Quebec.

A china manufacturing concern of Youngstown, Ohio, who wish to establish a china factory in London, Ont., asks as an inducement that the city council persuade the Government to increase the tariff on china to 70 per cent. The council have decided to offer the concern ten years' exemption from taxation and also to ask the Government to increase the tariff on chinaware, but not to the extent proposed.

The Halifax Times is wondering what is the matter with Nova Scotia shipbuilders. It cites a case of where one of the leading coal companies of Nova Scotia asked shipbuilding firms in Yarmouth, Shelburne, Pugwash, all towns in Nova Scotia, and one in Connecticut, U. S., to tender for the construction of six wooden barges. The Connecticut firm's tender was accepted for the reason that, after the duty was paid, the figures were fully 20 per cent. under the lowest of the Nova Scotia firms.

The Toronto Window Cleaning Company, Limited, Toronto, have been incorporated with a capital of $40,000, to manufacture and deal in all apparatus and appliances for housecleaning. The directors are: J. B. Kay, W. T. Bradshaw, R. K. McIntosh, D. K. Ridout, and J. D. Montgomery, all of Toronto.

The Magee-Walton Co., Limited, Hamilton, Ont., have been incorporated with a capital of $100,000, to carry on a wholesale and retail coal, fuel and ice business. The directors are: W. G. Walton, Wm. Magee and Jas. Sturdy, all of Hamilton.

Mayo Mining & Development Company, Limited, Windsor, have been incorporated with a capital of $250,000, to carry on in all its branches the operations of a mining, milling, reduction and development company. The directors are: Hon. Richard Harcourt, Toronto; J. T. Harcourt, Geo. Campbell, O. E. Fleming, and H. O. Fleming, all of Windsor.

In order to encourage the deep mining of gold in Nova Scotia, the Provincial Government has passed an act subsidizing the sinking of deep shafts by paying one-half of the expenses of sinking. In his geological survey, E. R. Haribault, of the geological survey staff, discovered a resemblance of the gold-bearing reefs of Nova Scotia to the rich deep workings of the Bendigo mines of Australia, which have been worked successfully to a depth of 4,000 feet. The Nova Scotia mines have not been worked deeper than a few hundred feet. This is the reason for the Government subsidizing deep mining.

Mr. James Ross, in discussing the position of the Dominion Coal Co. recently said that the earnings of the company, to be presented to the annual meeting to be held in March, will show that, in spite of the breakdown in No. 1. Dominion, the past year has been a most successful one. The year 1902 was a record one in regard to earnings, which were $1,715,000. Mr. Ross says that the earnings for 1903 will reach that amount notwithstanding the fact that No. 1 Dominion was shut down. He also said that they are banking more coal this winter than ever before, and that their entire output up to December has already been sold.

NOTES.

Wm. Lithgow, formerly secretary of the Port Hood Coal Co., has accepted the position of coal sales agent of the Nova Scotia Steel & Coal Co.

Trains will be running over the new Temiscaming Railway shortly to New Liskeard. At the present time the road is completed 57 miles north of North Bay, and trains are running regularly on that section.

The Peterborough Fuel & Cartage Co., Limited, Peterborough, Ont., have been incorporated with a capital of $40,000, to carry on the business of a fuel, ice, salt, cement and lime merchants, and also that of a general carter.

The Craig Co., Limited, Ridgetown, Ont., have been incorporated with a capital of $50,000, to carry on a general merchantile and produce business. The directors are: T. Craig, W. D. Craig, and J. R. Craig, all of Ridgetown.

Jones Bros. & Co., Limited, Toronto, have been incorporated with a capital of $60,000, to manufacture and deal in barbers' supplies, druggists' supplies, etc. The directors are: S. Jones, J. W. Baker, and G. B. Wood, all of Toronto.

The Bridgeport colliery, of the Dominion Coal Co., has been closed down temporarily. The reason for this is the present depression in the United States coal trade and the reduced Canadian markets. Operations will be resumed in the Spring.

The Canadian Northern Land Company, Limited, Ottawa, Ont., have been incorporated with a capital of $20,000, to deal in real estate. The directors are: F. H. Crysler, J. R. Bethune, L. G. Larmonth, P. Larmonth, and G. G. Crysler, all of Ottawa.

The Sydney, N. S., city council have decided to offer the Sydney Manufacturing Company a bonus of $10,000 and exemption from taxation for 20 years, provided that the company increase their capital to $250,000, and that they commence the manufacture of cars.

Robert Stewart, Limited, Guelph, Ont., have been incorporated with a capital of $100,000, to carry on the business of a contractor, manufacturer and dealer in saw logs, timber and lumber. The directors are: R. Stewart, E. S. Sinber and R. D. Stewart, all of Guelph.

Barclay, Glass & Co., Limited, Dundas, Ont., have been incorporated with a capital of $20,000, to manufacture, repair and deal in pianos and other musical instruments. The directors are: A. Glass, W. J. Barclay, F. W. Cooper, A. Barclay and J. Johnston, all of Hamilton.

The D. B. Martin Co., Limited, Montreal, have been incorporated with a capital of $100,000, to manufacture and deal in all products from dead cattle, sheep and hogs. The directors are: H. F. Cook, Westmount; T. C. Casgrain, E. F. Suweyer, D. Armour and George Cloutier, all of Montreal.

The Dominion Iron & Steel Co., have awarded the contract for the construction of the coal washing plant in connection with their works at Sydney, to Heyl & Patterson, Pittsburg. The contract calls for the completion of the plant in July. It is to have a capacity of washing 100 tons per hour.

The Laprairie Brick Co., Limited, Montreal, have been incorporated with a capital of $300,000, to purchase the business now being carried on under the name of The Laprairie Brick Co. The directors are: J. W. Tester, T. A. Trenholme, G. G. Foster, P. Galibert, J. Forman, J. McKergow, F. Buller, and A. J. Corner, all of Montreal.

THE OFFICE

DEVOTED TO THE OFFICE STAFFS OF BUSINESS ESTABLISHMENTS

A SIMPLE METHOD OF BOOKKEEPING FOR RETAIL MERCHANTS.

By C. T. Inman, Denver, Colo.

THE books to be used are as follows: Ledger and two common manila two-column sales books (journal ruling). On the first page of the ledger enter a statement of assets and liabilities containing at least the following data:

Assets.	Liabilities.
Cash.	Accounts Payable.
Stock (Mdse.).	(Other Indebtedness).
Accounts Receivable.	
Other Assets.	

The difference between the assets and liabilities will be the dealer's net worth.

Head the last eight pages in the ledger as follows'

1. Goods sold for cash.
2. Goods sold on credit.
3. Goods bought on credit.
4. Goods bought for cash.
5. Cash received on account.
6. Cash paid on account.
7. Expense.
8. Goods returned from customers.

Take one of the sales books, head columns as in form (A).

As credit sales are made, enter customer's name and items bought, but carry only the total of the purchase into the first column. Any goods returned by the customer should be entered as above, except that the total would be entered in the second column. As the page fills up, foot each column separately and carry to corresponding column on next page until the end of the month, when the total of the first column is entered on the page in the ledger marked "Goods sold on credit," and the footing of the second column is entered on the page headed "Goods returned by customers."

If duplicate sales tickets are used, simply enter the customer's name, date and amount of sale or return in its proper column and file the sales ticket in shape for convenient reference. Now, at such time in the day as

JANUARY, 1903.

Day.	L. F.	Sales.	Total of Each Sale.	Total of Each Return

Form A.

is most convenient the sales are entered in the ledger as charges to the customer's account and the returns as credits, and checked in the sales book to show that they have been so entered.

Now turn to the last page of the sales book and head columns as in form (B).

As goods are received from the wholesaler the invoice is, of course, checked for quantities, prices and extensions. Any returns or deductions are noted on invoice and deducted from its footing. Now, on this last page enter the name of the house the goods were bought from, the date of the invoice, and the amount after making all deductions. Treat all invoices in this manner until the page is full, then carry footing over to the preceding page, and so on to end of month, when footing is carried

JANUARY, 1903.

Day.	L. F.	Purchase.	Amt. of Invoice.	

Form B.

to ledger page marked "Goods purchased on credit." After so entering the invoice, file alphabetically.

No ledger account is necessary with the people of whom the retailer buys goods, as they have to keep his account in shape for convenient reference and will send him statements periodically, at which time he should check with invoices on his file and notify them at once of any difference. If retailer discounts his bill, the discount should be taken from invoice when it is checked up and net amount of invoice entered.

Freight is considered as expense and so entered through cash book.

For the cash transaction the retailer will use his other manila sales book.

Skip the first page and commence work on the second. On the right-hand page rule an extra column beside the two already there, as in form (C). On the left-hand page mark first column "Cash on account," and second "Cash sales." As customers pay on account, their names are entered and the amount placed in the first column from which it is placed to the credit of the customer's account in the ledger. As cash sales are made, the amounts are placed in the second column.

On the right-hand page head the extra column "Cash paid on account," the next "Goods bought for cash," and the last "Expense." As money is paid out on account, or in settlement in full, enter amount in first column opposite the name of person to whom paid. All cash purchases are entered in second column, and all cash paid for running expenses, freight, rent, clerk hire, etc., placed in the third column.

As soon as either page is full, foot each column separately and carry to proper column on next corresponding page, always remembering that "Cash receipts" are on the left-hand page and "Cash disbursements" are on the right. At the end of the month, carry the footing of each column to its proper page in the ledger. The difference at any time between the footing of the left and right side of the cash book is the amount of cash there should be on hand. The bank account is considered as so much cash. As checks are drawn, the dealer considers them exactly as he does the money he pays out, and makes his entries accordingly. When making his deposits,

he should consider that he is taking money out of one pocket (the cash drawer) and placing it in another (the bank), hence no book entry is necessary ; his check stubs show at any time his balance in bank.

Now, if the dealer's cash balances, the cash book entries are correct ; if it does not, the difference must be located and adjusted. If the dealer so wishes, he can prove his customers' accounts in the following manner :

Add to "Accounts receivable," as shown in statement of assets and liabilities, the footing of ledger pages marked "Credit sales," and deduct the footing of ledger pages marked "Goods returned from customers" and "Cash received on account." If his work is correctly done, the footings of each amount due from his customers, as shown by their ledger accounts, will equal this amount exactly.

The comparison shown by the eight pages in the ledger will be of a highly interesting and instructive nature to the dealer, and will aid greatly in determining his

The injury the dishonest tradesman inflicts is not confined to the creditor he thus defrauds. In fact, his is probably the least. One example. By systematically cutting prices, say down to a point that shuts out his honest neighbors, he demoralizes trade conditions at every point within the sphere of his influence. Indeed, if he obtained his goods by out and out burglary to put on the market, the conditions would be the same for the honest competitor, who has to pay for his goods and sell them at a profit. What's to be done?

Getting Lukewarm.

Sometimes it looks as if we were growing amiable towards corrupt practices in every direction. Common old-fashioned honesty is too dull for our new-fashioned wits and we are apt to wink at the "clever" men who "do" one another, if only it be within the law and wear a look of respectability—for this is the criterion.

JANUARY, 1903.

Day.	L. F.	Cash Received.	On Account.	Cash Sales.	Day.	L. F.	Cash Paid.	On Account.	Goods bought for Cash.	Expense.
		Form C.					Form C.			

future operations and help in a great measure to stop leakages, by keeping him thoroughly conversant with the principal features of his business.

DEALING WITH DISHONEST DEBTORS.

By J. E. W.

WHAT to do with dishonest debtors has always been a perplexing question. The law is not favorable to incarceration for the offence and, on the whole, it is no doubt well that this is so. Otherwise, there might be abuses of the privilege that would quickly unbalance its salutary results. There are, however, from time to time, debtors whose transactions reveal such systematic and premeditated dishonesty, that some more adequate punishment seems absolutely necessary as a public safeguard; and, that creditors are not armed with some such weapon to meet—or rather prevent—this class of offenders, is at times exasperating.

Some Instances.

For instance, a meeting of creditors is called. The usual vague explanations follow, with fictitious accounts of losses, etc. Unheard of relatives and sundry persons make their appearance as creditors, and finally, on calls for an "offer," the debtor produces his wife or brother or sundry other person who is "willing" for disinterested reasons, to buy the stock and outfit if the creditors will accept, say 25c. on the dollar. This is the ordinary "hold up," and it is quite complete. The offer is accepted because it is the only thing in sight.

Prompted by Shrewd Lawyers.

This farce has invariably for prompter a shrewd if briefless lawyer, and, so far, there seems to have been invented no iniquity for the fathering of which his services are not available. Not that we find fault or rail against the profession in particular. Indeed, we should all of us, no doubt, find the laws rather irksome and tedious if we had no one to help us break them.

But we are not going too deeply into the psychology of the matter nor yet to usurp the province of the pulpit. We are interested just now in the business aspect of the matter purely, and feel that something ought to be done along these lines for the protection of the honest traders scattered all in this broad country.

Lists of Dishonest Debtors.

Associations exist now in practically all classes of trade to maintain parity of prices and in other ways promote equilibrium, and prevent trade fraticide. Could these associations post the names of dishonest debtors in the same way that names are listed by them for other purposes and privileges? The decision of the creditors meeting on the point might be taken to determine whether or not the debtor has placed himself in this category. Mercantile reports of course, confine themselves to the fact, that a compromise was effected, but honest men, also are sometimes unfortunate and obliged to compromise. The trade report dare not classify if it could. A trade journal, too, might be a convenient plan, but would at once give the debtor the advantage of the "legal aspect" in the libel proceedings that would inevitably follow. The judgment of a creditor's meeting would not avail in law, unfortunately, nor protect a journal without special legislative enactment. The association, therefore, seems to have the best appliance, at present, within its own reach.

But (and here the whole question is reopened), we are reckoning without the cupidity of the merchant. The dishonest debtor may be posted and blacklisted, but is the merchant born who can refuse good money, even if dishonestly made. And supplies will therefore continue in proportion to risk only.

There is the loss of the past to overtake and the profit on present transactions both to tempt. He knows that if he refused, the merchant across the street would not, and there we have it. So that until the merchant, himself, in the interest of the honest tradesman, put his foot down firmly, the question will probably remain there, or be relegated to that other, last melancholy old-fashioned day of reckoning when honesty will not be at a disadvantage.

SET AN EXAMPLE.

Clerks watch their employer just as closely as he watches them. If he is careless or negligent in any way they are likely to follow suit sooner or later. For example, if they see that he is discourteous to customers they will become likewise; if he is in the habit of observing irregular hours in his business, they will avail themselves of the same privilege, and so on to the end of the chapter, tit for tat.

Doubtless employes are in the wrong here, but it is human nature. It will be easier for a business manager to reform his own habits before he tries to reform those of the men who work for him. If he is careful, courteous and punctual, his clerks will be influenced by it. The spirit of industry and energy is contagious, but clerks catch it more readily from their employer than from each other.

This list is for the purpose of placing retailers, manufacturers' jobbers and other readers in touch with reliable and competent accountants and auditors whose services are so frequently required for such purposes as opening books,

Leading Canadian Accountants and Auditors

adjusting and auditing accounts, arranging partnerships or organizing joint stock companies, devising special office systems, making collections and investigations, handling estates, making valuations, etc.

Educational Department.

The following institutions for the education of business men's sons and daughters are recommended by this paper:

More Knowledge, More Money.

If you had a better knowledge of **BOOK-KEEPING, SHORTHAND, COMMERCIAL LAW, JOINT STOCK COMPANY LAW, BUSINESS CORRESPONDENCE,** wouldn't you be able to earn more money?

We teach these **BY MAIL** at a very small expense.

Anyone who can read and write can learn these things.

Write for our free booklet and state the subject or subjects you would like to study.

Canadian Correspondence College, Limited,
42-46 King St. W., - TORONTO, ONT.

Western Business College

Cor. College and Spadina avenue, **TORONTO.**

Thorough courses in Bookkeeping, Stenography, Typewriting and **Penmanship**; individual instruction.

A. J. HOARE, Principal.

St. Margaret's College, Toronto

A Boarding and Day School for Girls.
Thorough courses in every department.
Only teachers of the highest academical and professional standing employed.
GEORGE DICKSON, M.A., Director.
MRS. GEORGE DICKSON, Lady Principal.

Typewriting.

Bookkeeping and Shorthand are sure stepping-stones to success.
Teachers who have had practical business experience teach these branches in

THE WILLIS BUSINESS COLLEGE.
A school of genuine merit. Send for our beautiful catalogue.

CURRENT MARKET QUOTATIONS.

February 19, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

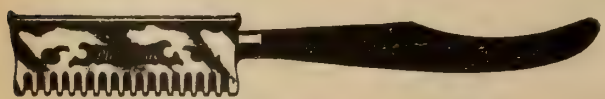
The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

"THE REAL" SAFETY RAZOR IS A SELLER



OUR CONDITIONS ARE : Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face, strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

Economic Conditions in Russia

By George Kennan.

AT first glance, the financial position of Russia would seem to be fairly strong. Her public debt—a little more than $3,300,000,000—is large, but her credit abroad continues to be good; her bonds recommend themselves to prudent and conservative investors—the New York Life Insurance Company, for example, holds $8,000,000 or $10,000,000 worth of her guaranteed railway securities—she has recently refunded $1,400,000,000 of her 5 and 6 per cent. interest bearing debt at 3 1-2 and 4 per cent., with an increase of only $30,000,000 in the principal; and her reserve of gold now amounts to something like $400,000,000, with an additional sum of $340,000,000 in circulation. This, on its face, would seem to be an extremely good showing; but it must not be forgotten that the stability of national finances depends, ultimately, upon the prosperity and earning capacity of the people who compose the nation; and that a government which has despotic power may, for a long term of years, make a good showing to its creditors while at the same time it is impoverishing its people and exhausting the source from which it draws its supplies.

Seventeen years ago, Mr. E. I. Utin, one of the most distinguished lawyers of the St. Petersburg bar, a close observer and a man of wide information, said, in a discussion of this subject: "A clever finance minister may, for a long time, make ends meet by devising new methods of taxation, by raising excise and customs duties, or even by juggling with figures; but there is no hope for the finances of a country like ours, where the taxpaying power of the population as a whole is steadily decreasing."

Statistics compiled by the zemstvos of 49 provinces of European Russia in 1891 showed that 891,000 peasant families, representing a population of perhaps 7,000,000, had only nine acres of land per family; and that 2,219,444 peasant households representing a population of about 18,000,000, had only 21 acres each, although hundreds of thousands of such households consisted of from eight to 25 members. A family of, say, 12 persons might gain a subsistence from a farm of 21 acres—or even from nine acres—if the land were all arable and fertile; but the Russian peasant allotments include land of all sorts—pasture, woodland, desert and swamp—and even the part that is arable has become so impoverished from lack of fertilization, that it often yields less than half of a normal crop. In European Russia, as a whole, the average yield of grain is only 39 poods (1,404 pounds) to the decetine (2.7 acres); while in Italy it is 55 poods; in Austria, 68; in Germany, 74; in France, 75; in the United States, 81; and in England, 122. The average productiveness of Russian peasant land-allotments, therefore, is only half that of American farms, and, if other conditions were equal, twice as much of it would be needed to support the average family.

But this is not the worst feature of the situation as regards land. Statistics show that the quantity of land owned by Russian peasant proprietors, per capita, and the gross per capita product of that land, are both decreasing, and have been decreasing steadily for many years. A commission appointed by the Minister of Finance in 1899 to ascertain if possible, the reasons for the decline in the economic condition of the peasant farmers of European Russia generally, and of the "black-soil provinces" in particular, reported that in the 50 provinces of European Russia the per capita amount of wheat and rye harvested in the years 1891-1896, as compared with the quantity produced in the years 1861-1865, showed a decrease of 35 per cent. in the "black-soil provinces" where the economic distress was greatest, the decrease was 44 per cent., or nearly one-half.

This marked decline of 35 to 44 per cent. in the per capita production of Russia's two great staples—wheat and rye—was due to a variety of causes, one of the most important of which was a large increase in the population, without any corresponding increase in the available area of land. Between 1876 and 1896 the quantity of arable land per capita decreased in European Russia as a whole 16 per cent.; in the "black-soil provinces," 20 per cent.; and in the southern and southwestern provinces, 24 to 26 per cent. In many parts of the country the pressure of the increased population on the land was so severe as to reduce hundreds of thousands of families to a condition of hopeless poverty. In the Province of Ufa, for example, there were 20,000 families that had only 5.7 acres each, including land of all kinds. In the district of Shadrinsk, Province of Perm, there were 24,000 peasant families that had neither horses nor agricultural implements, nor food supply nor seeds; and these families constituted 38 per cent. of the whole population of the district. In the Province of Samara there were 405,000 persons who had to get their subsistence from less than three acres of land per capita, and 25 per cent. of all the peasant farmers in the province had no hay fields at all.

In the Province of Riazan 32,000 peasant proprietors out of 80,000 had no horse, and 21,000 out of 80,000 had neither horse nor cow.

Between 1860 and 1871 the number of horses in the "black-soil provinces" decreased 15 per cent.; in 1889 the decrease amounted to 30 per cent.; and in 1895 it reached 48 per cent.

The economic condition of the average Russian peasant in the central provinces, where the distress is greatest, may be shown in another way, by comparing his earnings and expenses. The statistical committee of the Province of Voronezh has made a careful and detailed investigation of the annual household budgets of 67 peasant families in that province, selected in such a manner as to be fairly representative of the whole agricultural population. It appears from the committee's report that the average peasant farmer's family consists of eight persons. Its annual gross revenue, from all sources, amounts to $212.20. Of this sum $105.08 is in money, and $107.12 in farm produce at its cash value. Of the cash receipts, $48.80, or nearly one-half, goes to pay

taxes and rent for additional land, leaving $56.28 in cash for clothing, tea, sugar, salt, kerosene, soap, agricultural implements, household furniture, etc., for a family of eight persons during a period of one year. The committee finds that such a family spends annually $8.84 for clothing; $1.96 for tea and sugar; $1.64 for household furniture; $1.20 for salt; 88 cents for kerosene; 39 cents for soap, and 4 cents for "articles of personal comfort." It is hardly necessary to comment upon the economic condition of a rural population in which the average family pays $48.80 in taxes and rent, and is then able to spend only $8.84 a year for clothing, 88 cents for lights, 39 cents for soap, and 4 cents for "articles of personal comfort."

The increasing exports of grain from Russia in recent years have been taken as an indication that the agricultural population of the Empire is becoming more and more prosperous and is raising a larger and larger annual surplus of food products, but such is by no means the case. Under pressure of desperate necessity, the Russian peasants are selling breadstuffs that they ought to consume, and are increasing their exports at the expense of their health. This was clearly shown by Mr. Sharapof at a meeting of the Society for the Encouragement of Trade and Industry in St. Petersburg; again by Mr. Marres in a report to the statistical section of the Moscow Juridical Society; and a third time by Professor Isaief in a report to the Russian Free Economic Society of St. Petersburg. Mr. Marres declared that Russia exported 17 per cent. of her grain product, while the United States exported only 8 per cent.; that the Russian peasant consumed only half the quantity of bread that he ought to eat; and that in 20 provinces of European Russia the population was underfed. Professor Isaief showed that the amount of food eaten by the peasants of European Russia generally was 20 per cent. less than the smallest quantity that the rules of hygiene prescribe The Russian peasants sell a disproportionate quantity of their grain product for export, not because they have a surplus—not because they do not need it for themselves and for their families—but because they must get money with which to pay their taxes.

If we test the economic condition of the Russian peasant by his taxpaying power, we are brought by another route to the same result. In the Province of Voronezh, for example—the same province in which one-third of the peasants had neither horse nor cow—the unpaid arrears of taxes were $15,566,000, while in Samara, including the land-redemption tax, they amounted to $28,801,000. Between 1871 and 1875 the arrears of taxes in the "black-soil provinces" never exceeded ten per cent. of the annual assessment. In 1896 they amounted to 42 per cent., and in 1900 to 177 per cent.

The Comptroller of State, in his report to the Czar for 1902, called particular attention to the fact that the arrears of land-redemption taxes in European Russia as a whole had increased from $47,000,000 in 1897 to $61,000,000 in 1902, and that in many provinces the peasants had practically ceased to pay these taxes. In the Province of Simbirsk the arrears were 282 per cent. of the annual assessment; in Samara, 403 per cent.; in Kazan, 562 per cent.; in Orenburg, 583 per cent., and in Ufa 613 per cent. These figures show, the Comptroller says, "how far beyond the strength of the peasants this burden is."

One would naturally suppose that when a prudent and far-sighted government discovered that is people were becoming impoverished, it would remove, if possible, the cause of the impoverishment, and lighten the burden of taxation by restricting expenditures. Russia has done neither of these things. The agencies that were hampering and crippling the productive activity of her agricultural classes ten years ago are still at work, and her annual budget has increased meanwhile from $520,000,000 to $1,036.000,000. But some of her statesmen have taken alarm at last. At a general meeting of the Council of State, on the 12th of January, 1903, Mr. de Witte, the late Minitser of Finance, informed the members of that Council that "the imposition of direct and indirect taxes upon the population has reached the last possible limit. To lay any further burden upon the taxpaying power will not only be fruitless of results, but can hardly be regarded as permissible in the present economic condition of the country. The aim of an enlightened financial policy now should be to seek means of decreasing, gradually, the burden of taxation."

After hearing and discussing the facts presented by the Minister of Finance, the Council of State resolved: (1) To ask his Imperial Majesty's permission to instruct the ministers and heads of departments to take most energetic measures to prevent further increase of expenditures; and (2) to direct the Minister of the Interior, in conjunction with the Ministers of War and Communications and the Comptroller of State, to investigate the reasons for the costliness of the Government's railway operations, and to report their conclusions to the Council at the earliest possible moment.

From the facts above set forth it clearly appears that the economic condition of the Russian people is extremely unsatisfactory; that they have been taxed to "the last possible limit;" that the Minister of Finance narrowly escaped a deficit in 1903; and that the Council of State finds it necessary to warn all ministers and heads of departments that they must take "most energetic measures to prevent further increase of expenditures." Can a government that is in such a financial condition as this carry on a long war in the Far East without imminent risk of imperiling its credit abroad and its prestige and security at home?—The Outlook.

THAWING WATER PIPES BY ELECTRICITY.

The city department of Montreal and the Montreal Water & Power Co., Montreal, have been for the last week or so using an apparatus provided by the Montreal Heat, Light & Power Company, Montreal, for the thawing out of frozen water pipes by a current of electricity.

The apparatus consists of a transformer mounted on a sleigh, with rheostats and lengths of wire. Connection is made with the electrical power main and the transformed current is sent through the pipes by connecting one wire with the taps in a consumer's house and the other to a hydrant, or with taps in another consumer's house. It is said that the pipes can thus be thawed out in from 13 to 17 minutes, with the consumption of very little power.

HAMILTON, ONT.

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

EASY INJECTORS.

The Canada Foundry Co., Toronto, have a circular ready for distribution regarding the "Easy" injector, reference to which is made on another page. This injector is to be sold through the hardware trade. Any readers interested are invited to send for the literature describing it.

TORONTO HARDWARE CO.

The Toronto Hardware Mfg. Co., manufacturers of cast iron soil pipe and fittings, sinks, brackets, bell traps, and of the "Dominion" hot water boiler, invite correspondence from any of the trade interested in these lines. Readers of Hardware and Metal are invited to secure their price list to see what they are offering.

NEW TERMS ON CARBIDE OF CALCIUM.

The Willson Carbide Co., St. Catharines, Ont., have issued a circular giving their present terms on calcium of carbide. It will now be packed in sheet steel cans with screw cap top, will contain 100 pounds of carbide and will be sold at $3.50 per 100 lbs. in less than ton lots, and $65 per ton in ton lots and over. Information re sizes, etc., can be had on request.

A USEFUL SOUVENIR.

From A. C. Jenking, manufacturers' agent, Montreal, Hardware and Metal has received a very handsome and useful little souvenir which he is sending out to the hardware jobbing trade. This is a neat little nail clipper which is guaranteed to clip nails "to the Queen's taste." If you have not already received one a letter to Mr. Jenking on your own paper and a mention of Hardware and Metal will meet with a prompt response. This is a souvenir worth having and well worth the asking.

COLONIAL STOCK FOOD.

Now is the time the hardware man should attempt to add to his receipts by the sale of stock and poultry food. During the next two months these lines are in great demand by judicious farmers. The Colonial Stock Food Company have issued a neat booklet giving full information regarding the lines they offer to the trade. As this firm offers especially good terms, and as Colonial Stock Foods are valuable for horses, cattle, sheep and hogs at this season of the year, hardware men who have not yet secured their agency in their town would do well to write for their literature at once. Mention this paper and ask for full supply of advertising literature.

ENAMELOID

A HIGH GLOSS VARNISH PAINT FOR INSIDE USE ON WALLS, CEILINGS, AND WOODWORK. BETTER THAN WALL PAPER.

The Sherwin-Williams Enameloid is fast taking the place of the faded, soiled, and germ gathering wall paper.

Enameloid is cleaner, more healthful and more durable than wall paper. Its increasing use means a larger field for the progressive paint dealer—more business—more profits.

Enameloid has many advantages over wall paper—it is easily applied—stands any amount of soap and water—has a durable gloss—does not fade—is more beautiful than wall paper—does not retain dirt or disease germs and is more economical.

Enameloid is a paint that appeals directly to every healthful home. It is a specialty that every dealer should have on his shelves.

Enameloid is made in 18 durable and attractive colors and put up ready for the brush in convenient sized cans.

Send for price list and color cards.

PITTSBURG STEEL CO.

The Pittsburg Steel Co., Pittsburg, Pa., are sending out their 1904 catalogue, giving comprehensive information re their wire rods; annealed, bright and galvanized smooth wire, painted and galvanized barbed wire, twisted cable wire, wire nails, fence staples, fencing, steel hoops, bands and cotton ties. As this firm is in a position to establish a strong connection their catalogue should be in the hands of every firm doing an importing business.

J. H. WILLIAMS & CO.

J. H. Williams & Co., manufacturers or iron, steel, copper, bronze and aluminum drop forgings, 150 Hamilton avenue, Brooklyn, N.S., have issued a comprehensive booklet containing full information, with illustrations, regarding their products. The book contains much that should be of value to any hardware and Metal readers interested in drop forgings, particularly wrenches for general or special purposes. Mention this paper when you write for the booklet.

AN EXPORTERS' DIRECTORY.

"The Export Merchant Shippers' Directory," of Great Britain and Ireland, is just published by Dean & Son, Limited, 160a Fleet street, E. C., London, England. Busy men everywhere will appreciate a selected list of manufacturers and shippers in concise form, and this directory gives an immense amount of information regarding the manufacturers and exports of the leading British concerns. The arrangement of the directory and the classification of names is such that one can almost open up the book at the very list he wishes to consult. This year's volume contains something over 1,500 pages.

Business Changes

ONTARIO.

THE Hamilton and Toronto Sewer Pipe Company, Hamilton, have sold out to J. H. New.

J. Rankin, general merchant, Smithfield, has sold out to H. E. Wood.

T. W. Chapman & Co., general merchants, Orangeville, have sold out.

T. G. Soyers, general merchant, Rutherford, has sold out to R. Roseberg.

A. S. Gledhill, general merchant, Benmiller, has sold out to E. H. Walters.

J. Armstrong & Co., general merchants, Inwood, have sold out to W. R. Dawson.

Little & Co., coal, wood, flour and feed dealers, Toronto, have sold out to J. H. McCabe.

The smelting work of the Canadian Copper Co., Copper Cliff, have been destroyed by fire.

J. M. Green, of J. M. Green & Sons, proprietors of planing and lumber mills, St. Thomas, is dead.

The stock of Sanderson & Mitchell, general merchants, Wroxeter, has been sold to T. J. Nichol at 70c. on the dollar.

The premises of the Turnbull Elevator Manufacturing Co., Toronto, have been damaged by fire; loss partially covered by insurance.

J. T. Heyworth, harness maker, Wroxeter, has assigned to H. Henderson. His stock is advertised to be sold by auction March 1.

Dalton & Strange, wholesale and retail hardware merchants, Kingston, have dissolved partnership. The business will be continued by W. B. Dalton & Sons.

G. Middleditch, proprietor of a foundry, etc., Ridgetown, has assigned to W. A. Gosnell; meeting of creditors announced for 26th inst.

QUEBEC.

C. Benoit, general merchant, St. Remi, is dead.

E. Villeneuve, general merchant, Jonquieres, has assigned.

P. P. Giguere & Cie., plumbers, Quebec, have registered.

St. Jean & Fils, contractors, etc., Montreal, have registered.

The Glen Falls Portland Cement Co., Montreal, have registered.

Lebeau & Paguinx, plumbers, St. Laurent, have registered.

Haigh, Brown & Co., machinery agents, Montreal, have registered.

FITCHBURG, MASS.

Rochon & Paquette, contractors, Montreal, have dissolved partnership.

Petition for winding-up order has been granted the Sleeper Engine Co., Montreal.

L. Bourgeois, carriage maker, Berthier, is selling out and removing to Sorel.

A. L. Bailey & Frere, general merchants, St. Maurice, have registered.

Moisau & Clouatre, carriage makers and blacksmiths, East Farnham, have registered.

Application has been made for a winding-up order for the Sleeper Engine Co., Montreal.

S. F. Wurtele has been appointed curator to S. Peters, proprietor of a planing mill, etc., Quebec.

C. Baillie has been appointed curator to Wm. Clendenning & Son, foundry and stove manufacturers, Montreal.

Lefebvre & Coulombe, grocers and hardware merchants, Berthier, have dissolved partnership. J. Coulombe continues in business.

V. E. Paradis has been appointed curator to J. A. Renault, St. Ephrem De Tring and N. Tremblay, St. Irene, both general merchants.

MANITOBA AND N.W.T.

Reid & Allison, properietors of saw mill, Bentley, have sold out.

The Nanton Hardware Co., Nanton, have sold out to C. H. Marshall.

The Macoun Lumber and Hardware Co., Macoun, have gone out of business.

G. Bradley & Co., general merchants, Bowsman, have dissolved partnership.

J. H. Gordon, hardware and implement dealer, Davidson has sold his hardware stock.

Humber & Robinson, machinists, Portage la Prairie, are dissolving partnership.

The Indian Head Machinery Co., Indian Head, have sold out to the Western Mfg. Co.

Schneider Bros., general merchants, Langenberg, have been succeeded by W. Bush & Co.

BRITISH COLUMBIA.

The dissolution of partnership of C. Richards & Co., general merchants, Fernie, has been registered.

NOVA SCOTIA.

The Glace Bay warehouse of the A. C. Thompson Co., foundrymen and hardware merchants, North Sydney and Glace Bay, has been destroyed by fire.

Good Scales vs. Poor Scales

I. E.

Fairbanks Standard Scales

VS.

THE PRESENT "CHEAP JOHN" SCALE

DO YOU EVER THINK of the importance and necessity of having an absolutely accurate and reliable scale for weighing all your goods. If that scale happens to be the least bit unreliable did you ever stop to consider that it would be the means of you losing a good percentage of profits in a year. Now there are several unscrupulous scale manufacturers to-day whose manufacturing cost is paramount to reliability, durability and accuracy. The cheaper they can manufacture the scale the better satisfied they are, regardless of what satisfaction their scale will give. Now we are only human beings the same as the rest of men, but our scale business for the past three quarters of a century has been built upon honest manufacture, and we stake our existence on your appreciating this. Enough said.

THE FAIRBANKS COMPANY

MONTREAL. TORONTO. WINNIPEG. VANCOUVER.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, February 25, 1904.

THERE is little to add to our report in last issue as conditions noted then are much the same as last week and there are no additional features of special interest. The improvement noted then in general conditions has continued this week. Of course it is still impossible to make deliveries in the country, but in response to the numerous enquiries received several local houses have sent out additional men to capture orders. In most lines enquiries continue to come in in considerable numbers and the majority of the local machinery houses are satisfied with the outlook.

Less and less is being heard now of the danger of American competition in general machinery and machine tools. Price cutting has not been general and it is generally considered that the danger was exaggerated.

As before, enquiries are most numerous for engines and boilers. Several more sales have been made this week and as the enquiries coming in cover a wide range of territory business should continue active. The sawmills are still requiring engines and boilers and general machinery. Business with the mills is expected to continue brisk for some weeks.

Machine tools and general iron working machinery have seen some movement this week and the feeling of confidence referred to in our last report is still quite manifest. Sales this week have not been large but several buyers are now definitely on the market and prospects for good business are extremely bright.

There is an increased enquiry for wood-working machinery, but as yet there has been very little actual business.

There is still a good movement in power transmission machinery and the indications point to an improved business later.

A feature of the week's business is the number of enquiries received for water wheels.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, February 26, 1904.

THE general condition on the machinery market remains much the sameas last week's report indicated. Perhaps there have been more shipments made on account of the opening up of the roads as a result of the somewhat less severe weather. Enquiries have been coming in quite freely during the week, and the actual amount of business done is encouraging. Although this week's and last week's business has been fairly good compared with the other weeks of this month, still that is not saying very much. For some reason the volume of business being done at the present time is not up to that of the same time last year. However, as a rule there is a hopeful feeling for improvement in the near future, the numerous enquiries doing considerable to strengthen that optimistic view.

At last things have begun to move on the electrical machinery market. Since the first of the year there has not been much actual business done, but enquiries of a promising nature have been continually arriving. Manufacturers and dealers built considerable hope upon this foundation and predicted that it was only a matter of time until orders would be placed and assume an active condition. This time, it appears, has arrived, since numerous orders have been placed during the past week, and already several firms report having their hands full.

It is doubtful whether engines and boilers have had this week quite the sale they had last. That however is in all probability merely a temporary lull, and that during the following weeks sales will be quite up to what they have been during the past weeks.

The demand for machine tools and iron-working machinery continues steady. Indications are that there will be some substantial orders placed in the near future. The Farmers' Co-operative Harvester Machine Co., Limited, who are locating their plant at Whitby, Ont., will be on the market for machine tools and iron-working machinery in general in a few weeks and are expected to place some substantial orders.

For wood-working machinery the demand continues about the same, nor did the bright prospects of last week amount to anything particular.

New York.

The Iron Age says of the New York machinery market: Though the market is "looking up" a little there has been practically no change in general conditions from those of the previous week. Business still continues to consist wholly of small orders, which, however, are coming in in fair volume. Some fresh enquiries of importance have come in, and the machine tool houses are figuring on several fair-sized lots, which will probably result in some orders above the present average within the next few weeks.

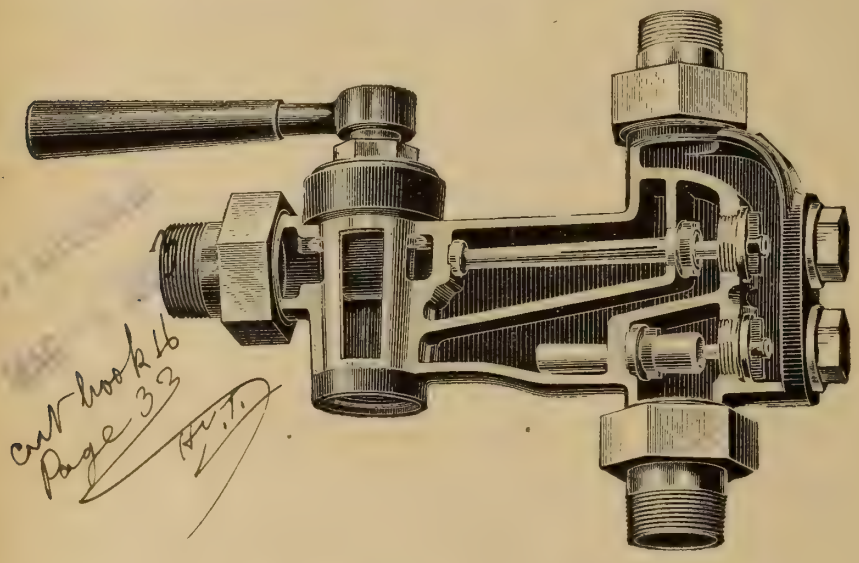
Universal Double Tube Easy Injector.

THE Canada Foundry Co., Limited, Toronto, are now placing upon the market their Universal Double Tube Easy Injector which they are now manufacturing, and which is covered by letters patent in Canada and other countries.

The accompanying cut gives a sectional view of this injector. One of the most important elements in a good injector is its ability to operate efficiently through a wide range of steam pressures without adjustment. It has been found impossible to make a reliable single jet injector that will operate successfully under such conditions, and as a consequence many devices have been invented and placed upon the market to accomplish this end and the double tube injector is one of these. However the makers of the Universal Double Tube Easy Injector claim that the Easy Injector is the only double tube injector

that is able to fulfill the requirements: double tube injectors heretofore constructed have not been able to accomplish this end and the double tube injector. In these last mentioned injectors the establishment of the current of water is effected through a very complicated starting mechanism, consisting of several valves working by strict time adjustment in their relations one to another. The disadvantages of having many loose parts, such as valves, stuffing boxes and nozzles, in an injector can easily be appreciated by those who understand the action of steam and dirty water on all such loose parts.

In the Easy Injector all complicated mechanism is done away with, all the parts being simple in construction, tight and solid, so that when necessary the engineer can take his injector apart and put it together again in a very short time; they do not have to be removed from the boiler to clean scale from nozzles or jets. The construction is such that small particles of dirt do not interfere with the working of the injector; besides, since the tubes are in a straight line they can be readily taken out, or a wire passed through them, to dislodge any obstruction, if necessary, by simply removing a front cap without dismantling the injector from its piping.



The Universal Double Tube Easy Injector.

The operating of the injector consists in simply opening the steam inlet valve and after the jet is established turning the cock to the boiler outlet. The chief difference of this injector from others is in the starting. By opening the steam inlet valve steam is admitted to pass simultaneously through both jets, thus creating a vacuum. The water rises to fill this vacuum and when the outlet into the boiler is established by turning the cock the stream of water is discharged into the boiler by the steam pressure behind. This operation is completed in a very short time. The special construction of the injector enables it to be operated under from 10 to 375 pounds steam pressure.

THE CYNICAL ENGINEER AND THE ROTARY.

A MAN who had some idle money to invest called at the office of a Cynical Engineer one morning and stated his needs, adding that he had just heard of a new and very promising steam engine which had great possibilities, and he asked the Cynical Engineer to go with him and report upon it, writes Egbert P. Watson, in Power.

The Cynical Engineer said: "What! Another one?"

"Yes," replied the Capitalist, "this is an entirely new departure in the use of steam, and is bound to revolutionize the business. It takes up very little room, has no dead centres and will create a great sensation in the trade."

The Cynical Engineer looked bored, slightly, but managed to say: "Who told you all this? You don't speak from your own knowledge, I take it."

"No," said the Capitalist, "the inventor of it told me, and he ought to know, for he got it up."

The Cynical Engineer reflected a moment, and then asked where the engine was. He was told that it was in a small shop about half an hour's ride off. He then said to the Capitalist that he would go and look at it, and asked whether a detailed report was required or a mere opinion, which latter would cost only $50, whereas the former would cost five times as much; adding that the Capitalist would save money by taking the opinion. This was assented to, and they departed.

Arriving at the shop, the Cynical Engineer found just what he had expected: a little place with a few tools, rented power and locked doors, which were not opened until the Capitalist had pushed a button and the visitors had been inspected from a peep-hole in a remote corner. Their appearance proving satisfactory, they were admitted, and upon a bench they saw a mysterious object, covered with a cloth, which, later, was discovered to be the engine which was to overthrow the engineering world. The Capitalist introduced the Engineer, adding that he was well known as the inventor admitted upon hearing his name. The object was uncovered, and there it stood confessed, a melancholy exhibit of a man's pursuit of an idea without asking himself and others whether it was new or old. It was new to him, and his argument evidently was that it must also be new to others, so he had proceeded to construct a working model of what he called a 10-horse engine; that is to say, it took the steam a 10-horse reciprocating engine would have required, and returned therefor about 2 1-2 horsepower. It was of a well-known type that had been patented under various disguises, as to name, almost from the beginning of the history of steam, but not one of them ever found more than a transitory notoriety. Determined persons with large capital and shops full of tools had exploited it with vigor, but one event happened to them all—total failure to achieve any economic result. A great wave of pity swept through the heart of the Cynical Engineer as he looked at the makeshift appurtenances and mechanical rigs of several kinds attached to lathes to make them turn ovals, and cut gears, and do things that they were not intended to do. He noted the threadbare aspect of the man himself and his wan face, whereupon uncertainty and doubt struggled with a sort of forlorn hope that he had something at last, and the Engineer, cynic no longer, for this occasion only, regretted that he had consented to look the machine over, for all he could say was that it was a hopeless case. He debated whether it would be better to tell the man the truth or to buoy him up with encouragement which would only lead him to spend more time and what money he could raise upon it; and concluded that the best plan was to undeceive the man, if he could, and endeavor to show him the fallacy he was pursuing. Sooner or later he would find it out for himself,

IT HAS CREPT

INTO POPULARITY

Manganese Anti-Friction Metal has become a very popular babbitt metal. It justly deserves its popularity because it is a babbitt metal "up to the minute." Every pound guaranteed.

Syracuse Smelting Works

MONTREAL NEW YORK SEATTLE

ASK YOUR DEALER FOR IT.

by the refusal of capitalists to embark in his enterprise. With this determination in mind he approached the machine and began to move it around, or tried to, by the flywheel on its shaft, but to his surprise it resisted every effort.

The inventor was looking on and advanced to lend a hand. Between them they obtained a revolution. Then the inventor turned the machine around back side to, and, a bonnet having been removed, the entire internal economy was disclosed. A mass of mechanism occupied every available inch of space. If there was a mechanical motion unknown to the trade the Cynical Engineer could not discover it, and for a moment he said nothing, but, like the Irishman's owl, kept up a tremendous thinking. Finally he said that perhaps the packing was set out a trifle too much. "No," said the inventor, and he pushed it to and fro with a scriber, which instrument is to a machinist what a hair pin is to a woman—handy for most anyting; "it is free." "Needs a little easing off generally, then, I guess."

"I don't think so," said the inventor; "it is in these two details; the abutments are opposed to each other, as you see, and when they are passed by the pistons there is a slight conflict, one crowding the other, so that there is a nip coming."

"Can you overcome that?" asked the Cynical Engineer.

The inventor wasn't sure. "It won't do any harm when she is under steam," he said. The Engineer said to himself that under steam and at, say, 300 revolutions per minute, the interferences would be like the pompom of a Maxim gun, but he reserved any audible comment for the moment and continued his inspection. Owing to the difficulty of moving the machine by hand, he refrained from trying to, but the inventor, diving his head under the bench, produced a 6-inch pulley and, slipping a 2-inch belt that hung on the shaft overhead, set the thing going. "Now you're doing it," said the Engineer, and sat down to close inspection. He saw that as the pistons passed the abutments one set of packing rings forced the other set open, for there were two sets; packing rings inside of packing rings, one to keep the pictons tight and the inner set to prevent the rings from leakage internally. There were by actual count 28 joints to be kept tight in the two sets of rings, and these joints in a majority of cases were at right angles with each other, so that by no possible means could they ever be made steam tight, or kept from jamming if they were nearly so. Aside from this radical defect there were many others more or less objectionable. Having surveyed the machine throughout he got up, and, putting his spectacles in his pocket, as a token that he did not need them any longer, he asked the inventor what his claims for the machine were, and he replied that the increased leverage on the shaft multiplied the power greatly, and—

"Where is the leverage?" said the Engineer.

"Here," said the inventor, pointing to the arms or wings of the pistons which radiated from the shaft.

"There is no mechanical advantage in that," said the Engineer; "those arms are of equal length; one weighs just as much as the other, so far as the power transmitted is concerned."

"Excuse me," said the inventor; "in some positions they are, but you will observe that the cylinder is eccentric to the pistons, and that in one part of the stroke one arm is two inches longer than the other."

"Yes," said the Engineer, "and I also observe that just at that particular time there is no steam pressure upon the long arm; as a matter of fact, the exhaust is open, the leverage is nil. What other claims do you urge?"

"Well," said the inventor, "the mechanical motions I employ are entirely new, and are, especially adapted to produce an easy movement without jar or vibration; I can run this engine up to 5,000 revolutions per minute if needed. For electric light sets it will be grand, connected direct to the dynamo."

"I am afraid that you are mistaken in saying that the mechanical motion you use is new. It may be to you, but it has been known for many long years, and is employed upon certain machine tools. I have never seen it put on a steam engine before; in that sense it is new, but it is not adapted for such work—not nearly as simple or efficient as a crank. I am sorry that I cannot encourage you to go ahead with your machine, but if I did I should feel that I had done wrong. I cannot see that it has any future, either immediate or prospective, and think that whoever undertook to market it would be throwing good money after bad."

The inventor, to whom these remarks were addressed, turned to look sadly at his machine, and finally said: "You have had a good deal more experience than I have, and ought to know, but it seems hard, after spending so much time and money on it that I could not afford, to have it knocked out in one round."

"If it is a fair question I would like to ask why you did not confer with someone who was well informed before you went into the experiment?"

"I thought of doing so, but you fellows charge so much for advice that I didn't feel that I could afford it."

"You spent perhaps $500 on this machine."

"Five hundred and sixty dollars," said the inventor.

"Well, $560," said the Engineer, "when for 10 per cent. of that amount you would have insured yourself against the loss incurred." And both he and the Capitalist went their ways.

Once in the open air the Capitalist said that he thought that the Engineer had been a little hard upon the inventor in condemning the engine root and branch, for the man was evidently satisfied that he had lost his money and would abandon his project. "If he does that," said the Engineer, "he has only the present loss to bear, whereas he would keep chasing an impossible scheme a long time if I had not told him the naked truth. I have in former years let people down with glittering generalities in such cases and bitterly regretted it afterward. I know of one man at the present time who has what he fondly imagines is a tremendous invention; he has had it for some years, and every cent of money and minute of time he can get he tinkers with it. Some time in the future he is going to 'organize a syndicate' to push it, but he never will. 'Syndicates' look first and leap afterward before they embark in enterprises, but inventors are too apt to pursue the opposite course; you did right to take advice yourself, for I fear that if you had not you might have got up another 'company' to scoop in a few dollars from credulous persons."

"I might have," said the Capitalist. "Goodbye."

"Goodbye," said the Engineer.

IRON AND STEEL HOCKEY LEAGUE

The eleventh game of this series was scheduled for February 17th at the Victoria Rink, Montreal, the contesting teams to be those representing the Jas. Robertson Co. and Williams & Wilson. The latter team defaulted. With one more game to play the standing of the league was therefore as follows:

	Won.	Lost.	To Play.
Thomas Robertson & Co	5	0	1
Jas. Robertson Co.	4	1	1
Drummond, McCall & Co.	1	5	0
Williams & Wilson	1	5	0

MACHINERY AND ELECTRICAL NOTES.

THE A. R. Williams Machinery Co., Toronto, Ont., have purchased the machinery of the plant of the Bailey Cutlery Works, Brantford, Ont., which were closed down recently.

P. Douglas, of the firm of Douglas & Co., foundrymen, Dartmouth N.S., is dead.

The Canadian Bridge Co., have increased their capital from the sum of $250,000 to the sum of $400000.

Lord Strathcona has donated $20,000 to the Manitoba University for the extension of the science department.

It is reported that the Le Roi, No. 2 Mining Company, B.C., are going to install additional concentration equipment.

Setson & Burpee, manufacturers of canning machinery, Vancouver, B.C., are at present preparing plans for the manufacture of $5,000 worth of machinery for the preparation and canning of crawfish at New Zealand.

Richard T. Brown, who has been in Australia for the last two years, has accepted the position of resident manager of the Nova Scotia Steel and Coal Co., Sydney. The negotiations were carried on by cable. Ald. Wm. Lithgow, Halifax, has accepted the position of coal sales agent of the company.

Alex. Ross, Reeve of Minto, Man., is calling for tenders to be received up to March 15, for the erection of a bridge over the Souris River. The bridge is to consist of two Howe truss spans, one of 100 feet and the other of 70 feet. Plans and specifications are at the office of the Public Works Department, Winnipeg.

Westinghouse, Church, Kerr & Co., incorporated in the States, have been granted a license to carry on in Ontario the businesss of mechanical engineers and dealers in and manufacturers of plants, engines and other machinery, tool-makers, brass founders, metal workers, boiler makers, millwrights machinists, etc., provided that in so doing they do not use a larger capital than $40,000.

The Q. and C. Bonzano Rail Joint Co., of Canada, Limited, Montreal, have been incorporated with a capital of $20,000, to manufacture and deal in all kinds of appliances, tools and machinery in connection with steam and electric railways. The directors are: U. J. Holden, Montreal; E. M. Smith, New York; C. F. Quincey, Chicago; J. W. Woods and J. A. Ritchie, Ottawa; and H. M. Wickwire, Kentville, N.S.

J. B. Hodson, manager of the Consolidated Cariboo Hydraulic Mining Co., states that the company have in view the installation of a system of permanent water supply for their hydraulic mining operations. The cost will be about $250,000. A dam will be erected at the outlet of Spanish Lake, making a reservoir lake of three square miles. In order to convey the water across the Quesnelle River a 48 inch steel pipe will be used. There will be two miles of this. The freight on this, which has to be taken in by wagon, will amount to no inconsiderable sum.

ENQUIRIES FOR CANADIAN TRADE

The following were among the inquiries relating to Canadian trade received recently at the Canadian Government office in London, Eng.:

1. A well-known ropework company are open to appoint a firm to represent them for the sale of their goods throughout Canada.

2. A gentleman with experience of the African market is seeking the agency for the United Kingdom of a Canadian shipper of wood work for building construction.

3. Inquiry comes from Russia for the addresses of some good Canadian firms exporting frozen salmon and lard.

4. A Dutch manufacturer of household and toilet soaps desires to get into touch with importers in Canada, and would reserve to reliable buyers the monopoly of various brands.

The following were among the inquiries received at the Canadian Section of the Imperial Institute, London, S.W.

5. The manufacturers of decorated wall paper and fabric specialities wish to introduce their goods into Canada, and would like to hear from Canadian firms interested.

6. A firm of merchants and exporters in the Midlands possessing a large connection invites correspondence from Canadian firms seeking buying or selling agents.

7. A firm in Belfast would like to represent, upon a commission basis, a first-class Canadian manufacturer of Furniture able to handle export trade.

8. A firm of manufacturers of high-class confectionery is open to appoint representatives in Montreal, Toronto, Halifax, St. John and Winnipeg.

9. A firm of general agents who claims good connection among the grocery and provision trade, nvite offers from Canadian shippers either upon a commission basis or as actual buyers.

10. A company manufacturing ochres, oxides and colors, wish to hear from Canadian importers.

11. The manufacturers and shippers of oils of various kinds and greases, would like to obtain a share of Canadian trade.

[The names of those making inquiries may be obtained from the Editor of HARDWARE AND METAL.]

TRADE ENQUIRIES.

Readers of HARDWARE AND METAL are invited to make use of this column to secure any information desired. In all cases a strong effort will be made to have all such enquiries answered as thoroughly as possible.

Books on Plumbing, Etc.

Editor Hardware and Metal—Would you please inform us where we can obtain books on plumbing and what books you would recommend for a beginner?

CAMERON & CAMERON.

Beaverton, Feb. 13, 1904.

Ans.—Authoritative books on plumbing, heating, ventilation, etc., can be secured from the David Williams Co., 232-238 William street, New York, or the Plumbers' Trade Journal, Box 715 New York city.—Editor Hardware and Metal.

Cheese Factory Supplies.

Editor Hardware and Metal—Would you kindly give us the names of wholesale firms handling cheese factory supplies. By doing so you would greatly oblige.

PHILLIPS BROS.

Havelock, Ont., Feb. 12, 1904.

Ans.—Among the firms handling cheese factory supplies are W. H. Harrison, Brockville, Ont.; the Plessisville Foundry Co., Plessisville, Que.; Penberthy Injector Co., Windsor, Ont. (pumps); Joseph Paquette, Montreal (knives.; Carrier, Laine & Co., Lewis; John Gillies Estate Co., Carleton Place; March & Henthorn, Belleville (engines); Macpherson & Schell, Alexandria; Dickson Bros., Campbellford; the Beach Foundry Co., Winchester (presses).—Editor Hardware and Metal.

Wholesale Coal Firms.

Editor Hardware and Metal—We would like to secure the names of wholesale firms from whom we could get a supply of coal.

W. R. SINGLETON & SON.

Carleton Place, Feb. 16, 1904.

Metallic Window Screen.

Editor Hardware and Metal—At the Toronto Exhibition last Fall we saw on exhibition a metallic window screen, the frame being of metal. Do you know who makes this screen?

W. H. TURNBULL & SON.

Brantford, Feb. 18, 1904.

Ans.—The Chamberlain Metal Weatherstrip Co. had such a display at the Industrial Exhibition, Toronto. This is probably the one referred to.—Editor Hardware and Metal.

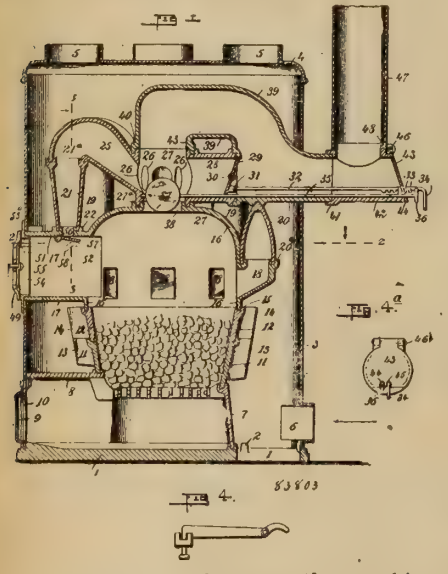
Patents Granted in Canada.

An authoritative report of patents granted by the Canadian Patent Office for recipes and devises of interest to HARDWARE AND METAL readers.

Hot Air Furnaces.

GRANTED Frank J. Piock, Provo City, Utah, U. S. Claims: 1. In a hot air furnace, the combination of a fire dome, a plurality of tubular passages connected therewith and converging to a common point, an off-take connected with said passages, said off-take having two members, and means controllable at will for obstructing one of said members.

2. In a hot air furnace, the combination of a fire dome, a plurality of tubular passages connected therewith and converging to a common point, an off-take connected with said passages, said off-take having two members, and a manually controlled damper connected with one of said members.



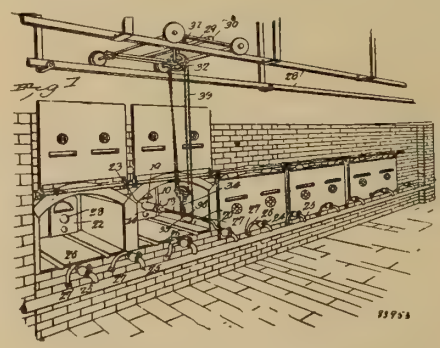
3. In a hot air furnace, the combination of a fire dome, provided with an outlet, a damper connected with said outlet, a plurality of tubular passages connected with said fire dome and converging to a common point, above said outlet, an off-take connected with said tubular passages, said off-take having two tubular members, and a manually controlled damper mounted within one of said passages.

4. In a hot air furnace, the combination of a fire dome, mechanism connected therewith for directing the flames and hot gases to a point disposed above said dome, a bifurcated off-take for directing said flames and hot gases to a chimney, said off-take having two members, one being straight and the other comparatively sinuous, and means controllable at will for governing the capacity of said straight member.

Furnace Charging Apparatus.

Granted Thomas Jones and Nelson F. Acers, Iola, Kansas, Claims: 1. An apparatus for charging a retort, comprising a holder for containing the material to be treated and means for forcing the charge from the holder without altering the position of the holder in so doing.

2. An apparatus for charging a retort, comprising a holder for retaining the material to be treated, and means for supplying fluid under pressure to the holder to force the charge therefrom.



3. An apparatus for charging a retort, comprising a holder for containing the material to be charged, and means detachably associated therewith for supplying fluid under pressure to force the charge therefrom.

4. An apparatus for charging a retort, comprising a holder, a follower head loosely mounted therein, and means for supplying fluid under pressure to the holder.

5. An apparatus for charging a retort, comprising a holder, means for supplying fluid under pressure thereto, and mechanism for detachably connecting the holder and fluid supplying means.

6. An apparatus for charging a retort, comprising a holder provided at one end with means for association with a compressing apparatus, and at its opposite end with means for connection with fluid supply mechanism.

7. The combination with a furnace, of a travelling crane, means for supplying air under pressure, a holder for containing material to be treated, a detachable device connecting with the holder and with air supply means, and serving to introduce compressed air into the holder, and mechanism connecting the said device and the crane.

Sheet Metal Radiator.

Granted William R. Kinnear, Columbus, O. Claims: 1. A flattened or elliptical radiator unit of double tubular construction having the ends of the members brough together by deflecting the metal and united by a seam, and leaving an inner air flue.

2. A radiator as described in claim 1 having the circulating passage extending across the air flue and connecting opposite points in the chamber formed between the members.

3. A radiator according to claims 1 and 2 in which the passage is formed by striking up the metal from the opposite walls of the inner member and uniting the open bosses thus formed.

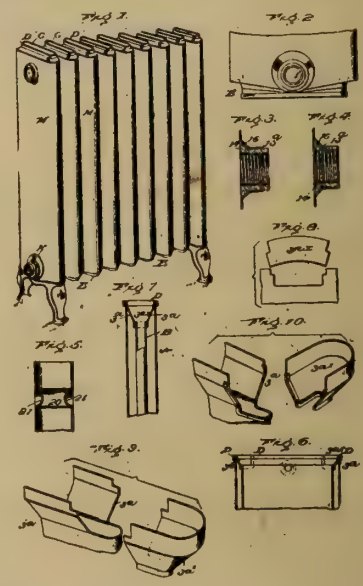
4. An embodiment of claim 1 in which the inner member is deflected outward, and the rounded ends are provided with gore shaped pieces to provide fullness at such points.

5. An embodiment of claim 1 in which both the inner and outer members are deflected for bringing them together.

6. A connection between adjacent walls in radiators constructed of opposed bosses struck from said walls and formed, the one with a radially presented annular groove and the other with an annular tongue entering said groove, the tongue and groove being rolled radially to flow the metal into intimate relation.

7. A connection for opposed walls in radiators, constructed of a closed and an open boss, the closed boss being formed with an annular groove and the open boss being provided with a tongue entering said groove.

8. A sheet metal radiator comprising a plurality of units connected at one end by a tongue and groove joint having an



integral diaphragm for closing said joint.

9. In combination with a sheet metal radiator constructed of inner and outer tubular members connected at their ends to form a chamber between them and a central air flue, a cap piece fitting in the central air flue.

10. A sheet metal radiator comprising a plurality of units suitably connected together, each formed with a central air flue and having an individual cap fitting within the air flue.

11. In a sheet metal radiator, the combination of the connecting boss and the thimble fitted therein, said parts being formed with interlocking depressions to prevent the thimble turning in the boss.

12. A modification of the thimble connection in which the groove in the thimble has the metal of the boss forced into it.

13. The support for the walls comprising the tubular strut, and the bosses struck up on the walls for holding the strut in place.

140%

You can make it on an investment of less than $10.00.

Sell COLONIAL POULTRY FOOD. Will positively make hens lay. The best poultry food, bar none, made. We help you sell it after you buy it. Our methods are quite as good as those of other concerns, and vastly less expensive. You make more money, and making money is your business.

Packed in 3 and 6-doz. cases; 1-lb. cartons.
Retails at 25c. per pkge.; costs $1.25 per doz.

Sell COLONIAL STOCK FOODS. Profits exceeds 50 per cent. The sale of Stock Foods are necessarily larger and more frequent than those of a Poultry Food. Colonial Stock Foods are the very best made. They are not untried. We give the names of hardware dealers who will tell you what they know.

6-doz. 10c. pkgs., @ .75 doz.
3-doz. 25c. " @ 2.00 "
Holds almost 3 lbs.

2-doz. 50c. pkgs., @ 4.00 doz.
Holds 6 lbs.
25-lb. Pails, - @ 1.30 each.
Retails for 2.25.

DUTTON, July 20, 1903.

Colonial Stock Food Co., Toronto.
Gentlemen, It affords me great pleasure to testify that the Colonial Stock Food sold to me by Mr. McMahon has been very satisfactory indeed. I got a large quantity last year, but I think it will take two tons to start me this season. My customers pronounce it the best horse and cattle food on the market. Wishing you success with your products.
Yours very truly,
DR. I. O. HENRY.

(Dr. Henry ordered nearly three tons last September.)

Write us concerning the agency for your district. Do it at once.

THE COLONIAL STOCK FOOD COMPANY
TORONTO.

THE SIDE WIRE TIRE

There is only one successful carriage tire in catalogue of tires and that the

DUNLOP SIDE WIRE TIRE

It is held firmly in place by steel cross bars vulcanized into the rubber, being a few inches apart, These bars engage the side wire at the rim. This means no swerving and even wear to the channel.

THE DUNLOP TIRE COMPANY, Limited,

BARB WIRE PRICES.

SOME little time ago the Canadian jobbing trade were somewhat disturbed by the action of one American manufacturer of barb wire who commenced offering wire direct to the retail hardware trade at prices somewhat lower than those quoted by the wholesale houses. This manufacturer succeeded in placing a number of orders, as the wholesalers were unable to follow his prices. Our information is that these lower prices have been withdrawn by this manufacturer and that there is a possibility of some delay in making deliveries.

There is a difference in the make of the wire to which some of the trade are calling attention. Some buyers will probably consider it an advantage, while others will be dissatisfied. The difference is in the barb and those who think the ordinary barb wire too dangerous will not like it. The barb of the new wire is of cut steel whereas the barb of the wire which the trade are accustomed to handle is made of wire with only the point sharpened. The barb on the new wire has sharp edges and is, therefore, more dangerous. Some buyers may consider this an advantage; others may differ from them. At all events it is well for the trade to know of the difference.

We would advice the hardware trade to place their order for barb wire with the least possible delay in order to ensure prompt delivery. The indications are that there will be a big rush and the important thing is to secure prompt delivery.

AN UNEXPECTED COMPLIMENT.

HARDWARE AND METAL does not include nor attempt to include in its clientele the master painter. For this reason, as was stated at the time, it was outside the province of this journal to report the recent convention of master painters held in Toronto. But from the exhibits of manufacturers at this convention we recognized an opportunity to glean some information for our readers. A short reference to the exhibits was consequently made in these columns.

In doing this we had neither desire nor intention to compete with the American or Canadian painters' publications which were making the convention the feature of their current numbers.

Yet comparisons will be made. And when they are we must look for praise or blame. We have received the following regarding one modest paragraph in our remarks about the exhibits :

Editor HARDWARE AND METAL :—

Did not fail to note article in your issue of the 20th inst. in regard to Lucas display at painters' convention recently held in your city, and might say the item was appreciated not a little.

Your paper's report of the convention, or at least the exhibits at the same, was the best that has reached us up to date.

JOHN LUCAS & CO.

Philadelphia, Feb. 24, 1904.

Who could fail to appreciate such a letter ? We must acknowledge it was unexpected, for the souvenir of Philadelphia and the other literature given out by John Lucas & Co. was so attractive, so truly artistic, that a report of the convention would not have been complete without reference to them.

THE REMEDY FOR CORRRUPTION.

IT is clear that Canada must look beyond the two great party organizations for a remedy for the corruption which is so frequently disclosed in voting contests, municipal, provincial and Federal. The organizations of the two parties are two skilfully devised machines whose first and final duty is to win. To leave to them the guardianship of the morality of our voting system would be an anomaly.

It is said that the balance of political power rests with the man who does not attach himself to either party. Granting this, it is at once apparent that the business men of Canada or of any section of the Dominion could readily, by united decision to hold out for any reasonable and just end, so influence the electorate as to make imperative their demands.

A few years ago municipal politics in Montreal had reached such a level that business men under the leadership of Mr. Ames, now a candidate for parliamentary honors, instituted a reform movement, the cumulative force of which resulted this year in the election of Mayor Laporte by an extraordinary majority.

A few weeks ago reference was made in these columns to the organization of the business men of Regina to invigorate the Town Council, which had bot into a rut and was hindering the progress of that town by its lassitude. The results of the organization have been remarkable. The town has been improved in appearance, in its status as a distributing centre, and in its reputation for progressiveness and enterprise—a valuable asset to a town as well as to a business concern.

A grave responsibility rests upon the business men in these matters. They understand the trouble and they have the remedy in their own hands. Have they the moral courage to ignore party exigencies and look first to the welfare of the country? 'Twill be their own loss if they do not.

PERMANENTLY PROFITABLE BUSINESS.

EVERY progressive merchant should look not only to immediate profits but to the establishment and maintenance of a business which will prove permanently profitable. Such a business can be built up only by securing the trade of the better class of customers. This is the class of people who have money to spend and with whom, no matter how careful they may be in money matters, quality is the first consideration. There are few customers who will more than once pay an excessive price for an article, but there are very many who want high-class goods and are willing to pay the regular price. These are the customers whose business is permanently profitable because it can be retained.

The bargain hunting class can be interested only so long as they are getting something for nothing—or believe that they are—which is the same thing. They drift from one store to another, and there are few merchants who find their trade profitable. They are useful only because they are always ready to relieve a merchant of his otherwise unsaleable stock at bargain prices.

The other class—the profitable class—are not so easily attracted in the first instance, but, once secured, their trade can be retained by treating them right, by supplying them with reliable goods only, with the brands for which they ask and with which they are satisfied. It is dangerous to offer these customers something "just as good" unless the salesman is absolutely sure of his goods.

This being the case, it is strange that retailers in general are not more careful in their buying. Often they are influenced in their purchases by the salesman who tells them they can make greater profits by handling his lines than from the sale of the established brands with which they are acquainted. Retailers should remember that most of these well-known brands which have stood the test of time are already on a rock bottom price basis. They are sold as low now as it would be profitable to sell them, and the difference in the price of the two brands very often represents pretty accurately the difference in quality. Hence to handle the new line at the same price is to give a customer an inferior article for his money. The immediate profit may be larger but a customer will not be deceived twice.

By all this is not meant that a merchant should never consider the advances of a new firm. The older firms themselves would probably be the last to claim the right to monopolize the trade of the country. No person disputes the right of a firm commencing in business to expect that patronage from the trade to which the merits of its goods entitle it. Moreover the country is growing, and will probably continue to grow, so rapidly that these firms will be unable to keep up with the demand.

But the merchant has his own reputation to sustain. His name has come to represent among his customers a certain class of goods. His firm name is, or should be, a guarantee of excellence.

The manufacturer's name should also be a guarantee of excellence, and the merchant who has a reputation at stake should insist that the goods he sells bear the name and trade mark of their maker. The manufacturer who has confidence in his own goods, and believes that they will bear comparison with other brands now on the market, will not hesitate to comply with this requirement. It is usually the case that goods which do not bear the name of their manufacturer are made for the sake of immediate profits only, and it is not expected that their quality will give them a permanent hold on the market. The merchant who is looking for a permanently profitable business among the better class of customers can not afford to handle these goods.

NEW ZEALAND PREFERENCE.

AFTER due consideration of the tariff recently adopted by New Zealand, the particulars of which were published in a recent number of The Grocer, the Dominion Government has decided that on the whole it is quite favorable to Canada and accordingly an order-in-Council has been passed extending to New Zealand the full Canadian preference of 33 1-3 per cent.

This mutual preference should stimulate trade between Canada and her sister colony of the Antipodes. The foreign trade of New Zealand for the fiscal year 1902-3 aggregated over £25,000,000, imports being £11,747,435 and exports £14,-923,135. Her imports covered nearly all lines of goods; her exports were chiefly wool and sheepskins, frozen meat, gold, kauri gum, flax, butter and cheese. Of this trade Canada imported from New Zealand goods to the value of $41,903 and exported to that island goods to the value of $462,538. We are evidently not getting a very large share so far.

Of course as New Zealand is a pastoral and agricultural country we can not expect to sell her much agricultural produce, but there should be a good opening for our manufacturers to develop a trade which, insignificant as yet has great possibilities.

WANT AGENTS IN CANADA.

An English firm manufacturing enamel (porceleine) similar to Aspinall's enamel are ready to appoint agents in this line. The line is a good one and sells in all sizes. Persons desiring to get in touch with the firm in question can do so by enquiry—Editor Hardware and Metal, Toronto.

BICYCLE ACCESSORIES.

EVERYTHING points towards a good year in bicycling circles and the sales by the manufacturers in Canada and the United States, up to the present time being nearly double those up to the same time last year. The advertising pages of the larger magazines of the United States present an old time appearance containing as they do many large displays for the bicycle.

It would seem wise for the hardware merchant to prepare for a good season by having an up to date stock of parts and accessories. They should not overlook the new Morrow coaster brake which is bound to be in big demand.

C. I. F. AGAIN DISCUSSED.

A. M. ST. ARNAUD, manager of the Canada Hardware Co., of Montreal, had a few words to say to Hardware and Metal on Wednesday with reference to an interview appearing in our last issue, which our Vancouver representative had with Colin F. Jackson. It will be remembered that Mr. Jackson disputes the decision of the court. "Mr. Jackson says that it is not correct to say that this decision creates a precedent," said Mr. St. Arnaud. "He says he knows of English decisions exactly the reverse. I wish he would let me know something more about these decisions. Counsel for the defense could not find them although he searched diligently, and there is no doubt that he is one of the cleverest lawyers in Canada.

"The only decision that could be found bearing on the case was one given in a French court in 1884. It was found by Mr. Mignault, counsel for plaintiffs. This decision established our contention. No other could be found, although counsel searched the records of English, French, American and Canadian courts.

"I think Mr. Jackson is also mistaken in saying that insurance companies will refuse to insure these goods against all risks. It is being done every day. The premium is a little higher but it could scarcely be described as a prohibitive or fancy rate of insurance. The exact difference was brought out during the trial.

"As to this decision preventing all future C. I. F. sales, all that I can say is that it has not done so yet. Any number of English firms have written me expressing their pleasure that the question had been finally settled. Not one of them suggested that the decision would prevent future C. I. F. sales.

"And I can say further, that I have bought recently from and received quotations from many well-known and long established English firms on C. I. F. contracts. It is evident that Mr. Jackson is not conversant with trade conditions as they exist in Canada."

MR. A. C. JENKING.

SMITH & HEMENWAY CO., of New York, who have recently opened a Canadian branch in Montreal, have placed in charge of their business in this country Mr. A. C. Jenking, whose portrait we reproduce below. Mr. Jenking is a young man who has established for himself a valuable connection among the hardware trade of Canada, and he is already securing good results for his principals. To a good proportion of the Canadian hardware trade Mr. Jenking requires no introduction, and many of our readers will recognize at a glance the portrait which is reproduced below.

Neither do Smith & Hemenway Co. require any introduction to the great majority of the Canadian hardware trade. The introduction was effected long ago by the wide distribution of their "green book" of hardware specialties which has long been recognized as setting a high standard of excellence in trade catalogues. The merchant who is acquainted with the "green book" need not be told that Smith & Hemenway Co. are noted for their modern business methods and the high class of the lines they handle.

To their already extensive line Smith & Hemenway Co. have recently added the output of the Page Storms Drop Forge & Tool Co., who manufacture all articles in drop forgings and drop forge

Mr. A. C. Jenking, Montreal.

wrenches. The Bay State Tap & Die Company, of Mansfield, Mass., are another concern whose output has been secured by the Smith & Hemenway Co., and they are manufacturing a particularly high grade of screw cutting tools. So certain do they feel of their product that they make a standing offer to submit samples for testing purposes.

The Utica Drop Forge & Tool Co.—another firm manufacturing for Smith & Hemenway Co.—have established a splendid reputation for their Utica pliers.

On application to the Canadian office a handsome souvenir, to which reference is made in another column, will be forwarded to any hardware jobber who has not already received one.

The Sawyer Tool Company, of Fitchburg, Mass., is another up-to-date and thoroughly progressive firm which Mr. Jenking has the good fortune to represent. As manufacturers of fine tools and graduated steel rules they have established a name for excellency among the hardware men of the United States and Canada. Merchants opening out this line should put in stock one of the company's fine sample sets for the display of which they will be furnished with a handsome show case free of charge.

Another firm which Mr. Jenking represents is the Asphalt Ready Roofing Company, whose goods are advertised in another column. For the sale in Canada of this permanent and handsome roofing, Mr. Jenking is appointing agents throughout the country. Hardware men might find it profitable to take up a new line.

Mr. Jenking is to be congratulated on the fine line of agencies which he has secured. It is a satisfaction to him that he represents only well-known, long established firms with a reputation at stake, and it makes it all the easier for him to build up a substantial business. Mr. Jenking has full charge of the Canadian business for the above mentioned firms, and all correspondence should be addressed to him at Room 215, Coristine Building, Montreal.

CHAMBERLAIN'S TARIFF QUESTIONS.

FOLLOWING are the questions which the Chamberlain tariff commission sent out to the manufacturers in Great Britain. As they will doubtless interest business men in Canada they are herewith reproduced.

1. State the nature of your trade or trades, and whether your sales are for the (a) home, (b) foreign, or, (c) the colonial markets.
2. What was the weekly average number of persons employed by you during 1903, distinguishing, if possible, men from women and children?
3. What are the principal articles that you manufacture for the home trade in respect to which you experience foreign competition?
4. Are any articles similar to those manufactured by you imported into this country below your cost price? If so, please state particulars as far as you can.
5. Have you any information leading you to conclude that such imported articles are placed upon the British market at or below the normal cost of production in the country of origin? If so please state particulars as far as you can.
6. Is your trade subject to adverse competition from foreign countries in consequence of any difference in the rates of wages, in the hours of labor, or in other respects? If so, please give such particulars as you can.
7. Has your export trade suffered in recent years by the operations of the tariff of any country? If so, please state your experience.
8. What amount of the reduction of the tariff of any country would enable you to compete successfully within that country with commodities made therein similar to those you manufacture?
9. What is your experience in respect of foreign competition in the colonies in your trade?
10. Do you suffer any disadvantages from operations of the patent laws or registration laws in other countries? If so, please state particulars.
11. Please state whether you would be willing to furnish to the commission any further detailed information; and, if so, on what subjects.

The address of the secretary of the commission is 7 Victoria street, London, S.W.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, February 26, 1904

Hardware.

THE freight blockade is still unbroken and in consequence deliveries can not be made. However, the travellers are better able now to reach their customers and their orders are coming in much more freely. Mail orders are also being received in larger numbers for forward delivery and as soon as the blockade is broken there will be an immense movement of hardware. Retail business seems to have been almost at a standstill throughout the country for some weeks back, the reason being of course the condition of the roads. Several jobbing houses complain that this has resulted in slow payments as the retailers have been unable to get their money. Anxiety is expressed in some quarters usually well informed, lest the stagnation of business for so many weeks should cause the failure of some retail firms with small capital. One or two actual failures during the last ten days have heightened this anxiety. Two or three local houses lost money by the failure of a Quebec firm. The general feeling, however, is that with the close of the snow blockade business will be very brisk and money will circulate more freely. This seems to be the belief of the retail trade for the orders received during the first two months of 1904 are quite as large as those of the corresponding months of 1903, and this in spite of the blockade and general tie up of business.

Price changes this week are not numerous. Some lines of cast iron hardware, such as thumb latches, hat and coat hooks, barn door hangers, and barn door tracks are selling at about 5 per cent. less than previous prices. The reduction has been made to meet American prices. New prices will be found below for poultry netting staples. Bed staples and blind staples are cheaper. New prices will be found below. Boxwood rules are selling now at 52 1-2 to 50 per cent. off list. Our information is that prices on barb wire have been withdrawn by the American manufacturer who was quoting to the retail trade prices lower than those at which the wholesale houses are selling. The manufacturers of bolts and nuts state that they can fill orders without delay for standard sizes. There should be no delay except in case of special orders for special sizes.

Poultry Netting—For Spring delivery orders are now being received in good numbers. Several orders by mail unsolicited by travellers are reported this week. Prices rule steady at former quotations. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—Also in some request for Spring shipment. We quote: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb. boxes, $12.50 list; 25 and 50-lb. boxes, $12.25 list; 100-lb. boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The list price is unchanged but discounts are increased, being now 25 and 2 1-2 per cent.

Blind Staples—The discount is now 40 per cent., making this line somewhat lower in price.

Boxwood Rules—After long uncertainty the price is now steadier at 52 1-2 to 50 per cent. of list.

Lawn Mowers—Prospects for a brisk Spring trade seem good as some orders are already being booked. Prices rule steady at following figures: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Garden Hose—All lawn goods are in good request for this early season. Discounts are as follows: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—Some business has been done this week. The discount is 60 per cent.

Spring Hinges—The good demand noted in our last week's report has continued this week. Spring hinges have been a feature of a few mail orders. Prices remain as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Wooden Goods—Almost all lines of wooden goods are scarce and difficult to obtain. Prices are very firmly held.

Game Traps—The discount on "Victor" is 72 1-2 per cent. and on "Hawley and Norton" 60 and 2 1-2 per cent. An occasional order is still being received.

Wire Nails—The local mills are working day and night at present in order to accumulate a stock sufficient for the Spring demand. Bookings for Spring delivery are being made now, but except to the city trade no deliveries are being made at present. As noted before, Windsor is no longer a delivery point for wire nails. We quote as follows: $2.40 per keg in carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, and St. John.

Cut Nails—Prices rule steady at former quotations. There is very little doing. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—Northwest orders are reported in greater numbers for Spring shipment. We again quote the following prices which are firmly maintained: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—As was noted in our last issue, there have been a few large sales quite recently but general business is quiet. There is very little activity this week. The discount remains unchanged at 25 per cent.

Horsenails—Trade is now very quiet. There are no price changes. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—The same remarks apply to horseshoes. There is very little activity at present. We quote: Iron shoes light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger,

$3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal only.

Screen Wire Cloth—An improved demand for Spring delivery is reported this week. The price is still $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Trade this week is only fair. Prices are unchanged and remain as follows: Nos. 6, 7, and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—The improvement noted in our last issue has continued this week. For future delivery, a brisk trade has been done this week. Prices remain firm and unchanged as follows: No. 5, $3.65; Nos. 6, 7 and 8 $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—As was noted above, our information is that prices have been withdrawn by the American manufacturer who was quoting to the retail trade prices lower than those at which the wholesale houses were selling. There is apt to be some trouble in making deliveries and retailers are advised to place their orders early in order to be sure of getting the wire in time for Spring and Summer trade. We quote: $2.75 per 100 lbs. f.ob. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—Still in fair demand at unchanged prices. There is some improvement in enquiry. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—A moderate amount of business is doing. The discount is 25 per cent., with net extras as follows: 1 and 2-lb. hangs, 25c. per 100-lbs.; 1-2-lb. hanks, 37 1-2c.; 1-4-lb. hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—The steady demand for rivets and burrs both for present and forward delivery is one of the features of the market. We again quote the following discounts: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—Manufacturers state that they have now no difficulty in filling orders for standard sizes. We quote the following unchanged discounts Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—In good demand. The freight tie up has given the manufacturers an opportunity to overtake their orders and accumulate some stock. It is thought that there will be less trouble in getting screws of all sizes than there was last season when a few sizes were almost impossible to procure. Prices are steady. The discounts remain as follows: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—A sorting business of fair proportions is being transacted at the following unchanged prices: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Cordage—Prices remain steady. All cotton goods are firm. We quote: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11c; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 20c.; cotton twine, 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30 to 31 1-2c.; cotton candle wick, 22 to 24c.

Building Paper—A fair business is being transacted with the city trade and some orders are being booked for forward delivery. We again quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—Trade is still in the mid-Winter dullness and there is scarcely anything doing. As stated last week, in the absence of any considerable actual business quotations are merely nomianal. We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade is dead. Quotations are: English, $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

There is no material change in the state of business. Short as was the thaw a week ago it had some effect in relieving the railway blockade and it gave a slight impetus to business. It likewise made the buyers think of Spring and resulted in a few mail orders for Spring shipment. Prices throughout for plumbing goods are unchanged this week. A feature of the market this Winter has been the steady and unprecedented demand for iron pipe. This continues in good request.

Lead Pipe—The improvement in the demand noted in our last issue continues this week. The price is still steady at 8c. for composition and waste and 7c. for ordinary. The discount is 35 per cent.

Iron Pipe—Still in splendid request. Prices as quoted in last issue are steady. We quote: Standard pipe, per 100

feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20: 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.90. The discount on all sizes of extra heavy pipe is 12 1-2 per cent.

Soil Pipe and Fittings—The demand is not very great but it is steady. The discounts are still as follows: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—The tin market being very strong, solder is firm in consequence. No further advance has been made over prices quoted in last issue, but at present the prices quoted as firmly maintained. Wire solder is quoted at 18 1-2c.; bar solder, 18c.

METALS.

General business in metals this week has been quite satisfactory. The freight blockade is, of course, making immediate delivery impossible, but most blookings have been for forward shipment, the intention being to deliver after the opening of navigation. There have been some large bookings of galvanized iron and tin plates recently and prices for same have been maintained pretty firmly in all these transactions. Owing to the increasing strength of the tin market the quotations for tinplates have been very firmly maintained. There is no actual change in the local quotations for tin but save for very large quantities no concessions would be given on the figures quoted below. Copper remains steady at last week's quotations, but for large quantities the price quoted is shaded slightly. Pig lead is very firm on the English markets and the margin of profit at prices quoted is very small.

It will be noted that prices of bar iron have been reduced another 5 cents. This item is not particularly strong.

Pig Iron—There is very little pig iron on the Montreal market at present. As the foundries are well supplied for present requirements there is not much doing. Summerlee is quoted at $20.25 to $20.75 per ton.

Bar Iron—Some large sales have been made recently. Prices are reduced this week by 5 cents. We quote: Merchants' bar $1.75; horseshoe iron $2; forged iron, $1.95.

Black Sheets—The primary markets continue very firm and in sympathy with them local prices are well maintained. There is some further improvement in the local demand, bookings for forward delivery showing a considerable increase. We quote: 28-gauge, $2.35; 26-guage, $2.30; 22 to 24-gauge, $2.25; 18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—There is not any special activity. We quote the following prices: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There is an improved demand at unchanged prices. We quote: Black Diamond, 8 to 9c.; Saunderson's, 8 to 9c. according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c.; "Air Hardening 50 to 65c. per lb.; Conqueror, 7 1-4c.

Sheet Zinc—A moderate trade is doing on a basis of $6.15 to $6.25 for cash lots, and $6.50 for smaller lots.

Galvanized Iron—There have been some large bookings for forward delivery. We quote for 28 gauge: Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—In sympathy with the firm tin market, prices of tinplates are very firm. Some large sales have been made recently. Cokes are quoted at $3.75 and charcoals at $4.

Terne Plates—The price remains steady at $6.75 to $7, the former figure for large quantities.

Ingot Tin—The market continues very firm and save for very large quantities no concessions are made. For all ordinary business the price is 32 to 32 1-2c.

Ingot Copper—Copper is steady at figure quoted last issue. The price would be shaded slightly for large quantities. We quote 13 3-4 to 14c. per lb.

Coil Chains—Our quotations are as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch., $4.00; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-in., $3.55; 5-8-in., $3.35: 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Antimony—Firmly held at 8c. per lb. Supplies are not very large.

Canada Plates—Very firm both in England and Canada. No quotable changes. Prices are: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Pig Lead—Firmly held at the advance noted in our last issue. At present prices on the English market there is little profit in the quotations given below. No concessions are obtainable. We quote $3.25 to $3.40. Only for large lots would the former price be accepted.

Zinc Spelter—Quoted at 6c.

Scrap Metals—There is a better enquiry for all metals except wrought iron. There is little actual business this month but prospects point to a greater activity in a few weeks. Some changes will be noted in the prices quoted below. Heavy copper is firmer. We quote: Heavy copper and wire 10 to 10 1-2c. per lb.; light copper, 10c.; heavy red brass, 10 to 10 1-4c.; heavy yellow brass, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-2c.; zinc, 2 3-4c. to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $14 to $15; stove plate, $12; mixed country rags, 65c. to 75c. per 100 lbs.; old rubbers, 6 to 6 1-4c. per lb.

ASHES.

There are no pearls on the market at present. First pots have advanced, and are now firm at $6.10 to $6.20, and seconds at $5.70 to $5.75.

HIDES.

The market is dull and featureless. Prices have not changed, and we still quote:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

Hardware.

PATIENCE is a virtue, an admirable quality. At the present moment is one of particular advantage in Ontario. Business men of all classes look forward to an active movement when the warmer weather sets in. But the warmer weather doesn't set in. Too much looking forward to what one wants as soon as possible is not congenial to the average temperament. Hence the value, the virtue of patience.

Cheerfulness is likewise desirable. It is not the easiest thing imaginable to be cheerful when we know that many accounts will fall due on a certain trade and that our bank account and our receipts are too small to enable us to settle up. It does not contribute to a merry spirit when we know that the next mail is likely to bring a number of anxious enquiries from creditors who may themselves be running about as short of the ready cash as we are ourselves. Yet there is a growing tightness of money in commercial circles, a tightness which will only be relieved by the passing of the snow and the return of the outdoor activities of the Spring time. We are hoping for the warmer days. But too much hope for warmer days maketh the spirit weary. Hence the value, the virtue of cheerfulness.

Optimism is the virtue par excellence. We know that trade is bad and has been bad for weeks. Yet we have reason to be content for we know, we have reason to feel assured that trade will be good, and that before many more weeks are gone. Severe cold and heavy snow have been and still are with us, but each returning day adds to the strength, the influence of the sun. But a few days and the cattle on a thousand hill will forsake byre and stock food for the fresh air and the grassy slopes; the young farmer will be "fixing up" his fences, his implements and his buildings for the Summer's activities, the contractor and his corps of craftsmen will start in to supply the general demand for dwelling houses all over the province; the householder will do his Spring painting and the wife her Spring housecleaning. All this means business. Let us be hopeful, be optimistic.

True there are wars and there will be rumors of wars; there have been strikes and there may be strikes. It is true, too, that great harm could be done

this Spring by strikes in the various building trades. But we will hope that the lessons of last Spring will have been learned and that the demands of both employers and employes will be tempered by a spirit of moderation and justice which will avert anything so calamitous as a general strike.

But how about market prices. There is practically "nothing doing." Business is quiet and no changes are reported.

Screen Wire Cloth—Orders are practically all in. Prices steady at $1.50 per 100 square feet.

Spring Hinges—A fair business is reported. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—A moderate demand still noted. Prices are as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8, and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—A few orders still coming in. Our quotations are as follows: $2.75 per 100 lbs. f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The market is steady. A fair trade is doing. We quot the following prices: No. 9, $2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, $2.65, freight allowance to 20c.

Wire Nails—A moderately good trade is doing with prices firm; $2.45 per keg f.o.b. Toronto, with carlots $2.40.

change. We again quote as follows:

Cut Nails—Not much doing. Prices are now steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—There is practically nothing doing. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horsenails—The market is quiet. We still quote discounts as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—A fair trade is doing. Prices are steady. We quote as fol-

lows: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—A small amount of business is doing. We again quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—There is a fair business at unchanged prices. We quote the following prices. Carriage bolts, common ($1 list), 3-16 and 1-4-in., 60 per cent.; 5-16 and 3-8in., 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—Orders for twine have been fairly liberal. Prices are steady. Our quotations are as follow: Pure manila, 14 1-2c.; British pure manila, 12c.; sisal, 11 1-2c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 29 to 30c; "Star," 36 to 38c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 23 to 24c.; 4-ply, 27 1-2 to 28c.; calking cotton, 16c.; cotton waste, colored, 6 3-4c.; white, 10 to 12c.

Woodenware—Prices are steady. Very little doing. Our quotations are as follows per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Diamond King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and 3 hoops $1.90. Matches, Sure Light, parlor, 500s, $3.50; Flashlight, parlor, 1,000s, $5.75; Kodak sulphur, 65s, $3.80.

Guns and Ammuition—The Stevens Arms Co. have notified the wholesale trade that they have set a minimum price at which their goods may be sold to the trade and asking the co-operation of all the trade in keeping prices up to the basis arranged. This step has been taken at the instance of the Canadian Wholesale Hardware Association and affects the trade only as far West as the boundary between Ontario and Manitoba.

Both Ornamental and Practical

We make all kinds of Architectural Sheet Metal Work.

Fanciful designs for effective finish in any desired style, as well as every variety of fireproof metal covering, suited to old or new buildings of any and every description.

Our goods are foremost among practically popular lines for decorative finish and superior utility—their reliable merit fully proved by conclusive tests.

Consult Our Catalogue for Full Details.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

Building Paper—The market in building paper is beginning to brighten. Manufacturers are receiving many enquiries. Last week's prices continue unchanged. We quote : Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—Last week's prices in cement continue practically unchanged. The otherwise fair demand has been curtailed owing to scarcity of cars and difficulties of transportation. We quote small quantities: Canadian Portland, $1.90 to $2.25; American Portland $2 to $2.10 f.o.b. Toronto.

Firebricks—The market in firebricks continues steady; the demand is better this week than usual and will continue to improve as the season advances. We quote English and Soetch, each, at 28 to 35c.

PLUMBING GOODS.

This season's trade in plumbing goods promises to be brighter than usual. Already a large number of enquiries are coming in which is a sure sign that operations are about to begin on a large scale. The noticeable feature in all these enquiries is that the call is almost exclusively for high-grade stock. More high-grade material will be used this year than ever before. Plumbers' supplies are already active.

Lead Pipe—Lead pipe is more active than last week. Our quotations are: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—The prospects are for a brisk trade in soil pipe and fittings. We quote the following prices: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Trade in iron pipe fittings is fair. We quote the following discounts: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—The market in copper range boilers is quiet as usual at this season of the year. Discounts at 15 per cent. continue.

Brass Goods—Trade is fair in steamfitters' brass goods and prospects excellent.

Iron Pipe—Trade in iron pipe continues steady. Last week's discounts continue unchanged. We quote f.o.b. Toronto: 1-8-inch, $2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch,

$11.05; 2 1-2-inch $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

METALS.

The improvement in the demand for metals which has been expected for some time seems to have set in. Trading is of large volume and is well distributed over the various lines. Buyers are not only taking goods more freely at the moment but are placing Spring orders somewhat more liberally.

Pig Iron—The market seems stronger than during the last week or two but neither buyers nor sellers seem anxious to rush orders. Prices are consequently steady at $18.50 for No. 1 and $18 for No. 2 f.o.b. Toronto. Prices at Midland are $1.50 lower.

Bar Iron—A fair business is reported with prices nominally unchanged. Our quotations are as follows: $1.80 f.c.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Business in this line is improving. Prices are steady. We quote as follows: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—Business keeps fairly active. Prices are unchanged. We quote the following prices: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A fair trade is doing. Prices at both New York and London are slightly lower. Locally there is no change, the quotations being 30 to 30 1-2c.

Galvanized Sheets—A good demand is reported at firm prices. We quote as follows: Queen's Head, $4.25 for 28 gauge; American, $4 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—Prices are steady, with a fair demand. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—Both ingot and sheet are in excellent demand for import. Prices are stronger and there is more confidence as to the future. We quote as follows: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—The market keeps firm both locally and at primary points. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—The volume of business is not large. Prices keep strong on foreign markets, but the local situation is unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing in smal lots. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Antimony—8c. per lb.

Old Material—A limited supply and a fair demand are (like last week) the features of this week's market. Prices are nominally unchanged from last quotations. We quote: Heavy copper and wire, 10 1-2c. per pound; light copper, 9c. per pound; heavy red brass, 9 1-2c. per lb.; heavy yellow brass, 8 to 8 1-4c. per lb.; light brass, 5c. per lb.; lead, $2.35 per cwt.; scrap zinc, 3c per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c. per lb.; country mixed rags, 50c. per 100 lb.

PETROLEUM.

No changes are noted in petroleum this week. Prices are as follows: Canadian prime white 19 1-2c.; Canadian water white, 21 1-2c.; American prime white, 20c.; American water white, 22c., ex-warehouse.

Hides, Skins and Wool.

The market is dull this week, the demand not being so good as last week. We quote the following prices:

HIDES.

PERSONAL MENTION.

The establishment of the Starke Hardware Co., Limited, Montreal, was slightly damaged by fire recently.

Mr. Fred Karn has succeeded to the hardware business of J. H. Buchanan & Co., Dundas street, Woodstock.

Duncan Gunn, general hardware merchant, Manitou, Man., lost $2,000 in a recent fire in his hardware store.

Mr. J. A. Decosse, general merchant, Somerset, Man., has decided to build a large brick store during the coming Summer.

Mr. A. C. Jenking, manufacturers' agent, of Montreal, is visiting the hardware trade of the Maritime Provinces this week.

Mayor Gregg, of Bruce Mines, who is also one of Canada's progressive hardware merchants, is in Toronto this week on town and railway business.

John Glover, hardware merchant, Aylmer, and president of the Aylmer Iron Works Co., was recently appointed president of the East Elgin Reform Association.

Mr. Geo. Caverhill, of the firm of Caverhill, Learmont & Co., Montreal, has been elected chairman of the executive of the Richelieu and Ontario Navigation Company.

Jas. Fleming & Son, Blenheim, Ont., have now finished installing their stock of hardware purchased from the Bowman Hardware Co., of London, and have opened up for business.

Mr. J. W. Watson, general merchant, Minden, Ont., who has sold his store and is offering his stock for sale en block or in part, writes: "Hardware and Metal has ever been a welcome guest and has ever been and now is in the van."

Mr. Henry Cullen, who opened a general store in Methven, Man., a few months ago, and who at one time was mayor of Vancouver, died of heart failure in his store on Monday, 15th inst. He leaves an invalid wife and a family at Kincardine, Ont.

Mr. Geo. James, of James & Reid, Perth, Ont., was in Toronto last week with the Perth hockey team, of which he is the manager. While in Toronto Mr. James secured an unusually large order for one of the lines his firm is making in their foundry at Perth.

Mr. J. E. Hawkins, who for fifteen years conducted a creditable hardware and tin business in Oshawa, Ont., died at his home in that town on Saturday, Feb. 6th. Mr. Hawkins was one of the oldest and most generally respected hardware men in Oshawa.

Mr. John G. Bain, a representative of the Grant-Hamilton Oil Co., Toronto, was struck by a street car on Thursday last week, receiving a wound above the right eye and fracturing his skull. An operation was necessary, but at last reports Mr. Bain was recovering nicely.

Mr. Geo. D. McAllister, representing Hoffman-Carr Mfg. Co., Philadelphia (Toronto office 118 Bay street) is a visitor this week to the trade of Montreal. Mr. McAllister also represents Messrs. Hutchinson, Shurley & Derrett (Dovercourt Twine Mills) Toronto.

Mr. Herbert B. Seybold, of the Seybold & Sons Co., wholesale importers of hardware, tin, Canada plate, galvanized iron, etc., Montreal, was in Toronto and Western Ontario points this week. Like most of the keener class of business men, Mr. Seybold speaks most hopefully of the outlook for Spring business.

Mr. William Berry, who represents the James Morrison Brass Mfg. Co., of Toronto, was in Montreal this week. Mr. Berry has been on a trip to Quebec and several other points in the province. He found business hampered by the snow blockade, but in spite of this drawback trade was far from being unsatisfactory. Considering the way business has been tied up for weeks, the prospects are particularly good.

MECHANICS WANTED.

WANTED—Boiler makers for Winnipeg. Apply Montreal office, HARDWARE AND METAL, 232 McGill street., Monday morning. (9)

BUSINESS CONDITIONS IN MANITOBA.

THE striking feature of the business situation at the moment are on the one hand the present dullness of trade, largely due to the snow blockade, and on the other hand to the excellent prospects as a result of the steady and large advance in the price of wheat, much of which is still in farmers' hands and to the large amount of building operations anticipated in Winnipeg and throughout almost every section of the West.

* * *

The Winnipeg Paint and Glass Co., 313 Donald street, Winnipeg, have moved into their new offices at 179-181 Notre Dame street, Winnipeg, and would be pleased to have their customers and other business friends take note of the fact.

Buyers
OF
Mixed Paints

are invited to correspond with us before buying their spring stock. While "Elephant Paint" is now better known to the consumers in the Northwest than any other, we propose to advertise it in a manner that will sell the goods for our customers, of which we can convince you by letter.

They are prepared in 43 selected shades, together with Outside and Inside White and Black. Guaranteed to give perfect satisfaction; will not crack, flake or chalk off.

We claim them to be unequalled by any paints in the market for beauty and durability.

The U. S. Steel Plate Situation.

The week opens with a little increase in the demand for steel plates, the Delaware, Lackawanna & Western Railroad having placed an order for four ferryboats with the Newport News Shipbuilding Company. These boats will require about 2,000 tons of plates for hulls and boilers and other structural material to a moderate amount. There is also better inquiry for tank plates for delivery in New Jersey and a fair inquiry from Canada. In all, between 300 and 400 tons will be placed within the next few days for this work, but few if any changes are reported in other steel products, only moderate business offering, for which full prices are demanded. The pipe interest continues to be the most active branch of the industry concerning steel, wrought iron and cast iron. It is reported that a recent purchase of 4,000 tons of skelp was made at about $24 by Eastern pipe works. Reports from the wire and steel industry continue favorable and there is less cutting on sheets, heavy gauges being especially well maintained. Concessions are being made on hoops and bands, but prices are very irregular, although a larger business is being placed at the lower prices. Further small sales of billets are reported at prices within 50c. of official quotations.—New York Journal of Commerce, Feb. 24.

THE FOREIGN METAL MARKETS.

Pittsburg Iron Markets.

THE ore people will hold a meeting in Cleveland next Monday, following the meeting in New York last Thursday and Friday, says a Pittsburg despatch to the Metal Market, Feb. 24. They expect to settle prices at a moderate decline from last year. The pig iron market continues erratic, there being a wide range of ideas. We hear definitely as low as $13 Pittsburg, for foundry, although most furnaces will not come near this. We note one sale of foundry at $13.60 Pittsburgh, and a carload at equivalent to $14.10.

New York Copper Situation.

The National Conduit and Cable Co. say under date of Feb. 20: "Until lately the copper market has acted rather erratically, but at present there are indications of improvement as regards both demand and price. Manufacturers are giving more attention to the market, and the placing of new orders recently has been effective in bringing about an advance.

A month ago the trading basis was 13 cents, and with copper then leaving the country for foreign parts in quantities hitherto unheard of, it was hardly to be expected that the market would be liable to show a loss of strength at such a time. But while Europe had been buying heavily in this market, the comparative inactivity experienced on this side, and the competition for domestic business among rival sellers partially offset the influence of large exports, and prices reacted.

During the last of January, Electrolytic wire bars were at the level of 12½ cents and later continued to decline until the wholesale value reached 12¼c. At that time it was plainly apparent that export houses were using a little adroit manipulation on the market in the endeavor to secure the most favorable terms possible. A certain element has been quite energetic lately in seeking to give the impression that the market was weaker than the actual facts warranted, but these tactics were carried to a point where they lost their force, and the entrance a few days ago of domestic buyers in the market with orders for several million pounds gave a firmer tone to the market by the material increase in the volume of business.

At present the offerings are more reserved and the tone decidedly firmer at 12½ to 12⅝ for Electrolytic bars. It is good opinion that consumers generally are rather lightly supplied, with possibly some exceptions, and with trade requirements large and a good manufacturing business in progress in important departments the outlook is regarded as encouraging.

The consumption of copper is certain to increase in the future, and present market values are low enough to stimulate its wide and growing use. In view of a large domestic demand for copper this year, and continued export buying, coupled with the probability of new requirements for ammunition and armament, the present copper situation seems to be in a decidedly healthy state. Within the past few days there has been increased activity to the trading, and the tendency of the market is again in the direction of higher prices. Large sales have been made of Electrolytic and Lake, thereby altering the current of the market, and imparting to it a firm tone.—The Metal Market.

Pig Iron at New York.

REPORTS concerning the pig iron situation are conflicting. The general temper of the market is evidently bearish, but there are many facts that substantiate the position of furnaces which refuse to make concessions, and taking all the distributive centres East and West there is quite a fair volume of business in the aggregate. It is evident, however, that several Eastern furnaces are quite willing to fill their order books for the second quarter on the basis of $13.00 for No. 2 plain, $13.50 for No. 2 X and a shade under $13.00 for basic, but single cars and a few hundred ton lots continue to be sold at $13.50 for No. 2 plain and $13.75 to $14.15 for No. 2 X at the furnace.

Some little increase in the demand for Bessemer iron is reported in the Pittsburg district, with sales within the last day or two of 5,000 tons standard at $13.15 at the furnace, equivalent to about $12.65 in the Valleys. A sale of 1,500 tons of malleable Bessemer is reported to have been made at $14.00 Michigan City, equivalent to about $13.30 at the Western furnace.

Southern iron continues quiet and is easier in tone, among the more recent sales being 3,000 tons of No. 3 foundry and gray forge, said to have been on the basis of $9.50 No. 2, Birmingham. But other sales of lower grades have been made at prices which indicate a lower No. 2 basis, gray forge selling between $8.00 and $8.25 at Birmingham, and more tonnage is under negotiation at the inside price.

One of the largest distributors of iron in the country reports that current sales are running slightly ahead of current production of furnaces represented, and with only moderate stocks on any of the furnace banks.

No definite information has been received as to prices of ore, but an open market is generally anticipated. It is claimed by the mining interests, however, that even Mesaba ore cannot be sold at a reduction of 75c. per ton without wiping out all profit.—New York Journal of Commerce, Feb. 24.

TRADE CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

THERE is every possibility of some success attending efforts now being made to locate and develop a source of petroleum supply in this province. At the present moment there are two different propositions on foot close to the City of Vancouver, each of which has succeeded in getting capital and expert assistance interested. One in North Vancouver, across the inlet from this city, was mentioned a few weeks ago as being in the preliminary stages of formation, instructions having been received by local solicitors from New York capitalists who are in the deal, to go ahead with the work of getting the company formed.

The other proposition is that of the Richmond Oil and Gas Co., operating on Lulu Island, near Steveston, the fishing town to the mouth of the Fraser river twelve miles from Vancouver. For several months past preliminary tests have been made, under an expert, Thos. Davis, who has been associated in the industry at Beaumont, Texas. That gentleman went back to Beaumont some weeks ago and placed an order for a large equipment of machinery which has been shipped and is now due to arrive here. Mr. Davis himself has returned.

The gentleman says he has convinced himself that gas and oil will be found when the work of boring has been carried on far enough. The oil indications, he says, are that it is of sulphurous base and the gas pressure is apt to be even stronger than that yet found in the Texas fields. Mr. Davis' estimate is that he will have to bore 1,200 to 1,500 feet to reach oil. A rotary drill and 10-inch pipe will be used. None but expert oil well men will be employed at first until there is sufficient development to require a larger force. Active operations will be begun in three weeks.

Other Vancouver parties interested in the oil prospecting in Southern Alberta have received very encouraging reports from there. One well is down 1,350 feet and for the last 300 feet gas pockets with considerable pressure have been encountered. The bottom of the borehole has been found to be saturated with oil each day when the change of shift is made and the boring cleaned out.

The Yukon government engineer, Mr. A. J. Beaudette, arrived from the North on Sunday last en route to San Francisco, where he will spend some time in the gold fields of California, gathering information on the best methods of carrying on hydraulic mining. This information will be put to service for the public benefit when the gentleman returns. He will also look into the most modern practical installation of stamp mill machinery for the crushing of free-milling ore. This is also with a view to developing the potentially rich field in the free-gold quartz veins of the Yukon district.

* * *

The mines of the Boundary district of the interior of British Columbia, have since the beginning of 1904 shipped out over 100,000 tons of ore. The Granby smelter, the largest in the interior, has treated over 77,080 tons already this year.

While these magnificent returns show the vast advancement in the production of ore in the mines of the interior, there is also some very good work being done with coast properties, of which as a rule very little is heard. Thos. Kiddie, manager of the Ladysmith smelter, was in Vancouver this week and he said their smelter was handling 275 to 300 tons per day, running very close up to its full capacity. The ores treated are all from cats and White Horse properties. From the coast the Tyee is the principal shipper to the Ladysmith smelter, the Gribbell Island mines of the Canadian-American Mining Co. being another contributor. From Van Anda also there is a fair quantity of copper ore being sent to Ladysmith from the Copper Queen mine.

The mines at White Horse are badly handicapped by location and high transportation rates, the ores sent out having to be shipped by rail on the White Pass road from White Horse to Skagway and then brought down on the C. P. R. Northern steamers. All the ore being sent from there is going to the Ladysmith smelter, Mr. Whitney, an American operator, having sent considerable. Capt. Irving's mine, the Arctic Chief, is also to begin shipment soon.

In addition to the Ladysmith smelter, the Lenora smelter at Crofton is working on coast ore. The Lenora mine sends 150 tons daily and outside of that 100 tons per day of customs ore are sent. Taken all in all, there must be over 500 tons of copper ore from coast properties treated by the two smelters on the coast of this province.

* * *

The land tax, as it is called, or the new export lumber tax recently imposed by the B. C. Government is causing great annoyance to some timber owners, especially the holders of large grants crown-granted before April, 1887. Whether by accident or design, these lands have to pay the export tax on lumber and other lands are free. Of course the timber from lands still held by the Crown and merely leased or logged under license, is prohibited from exportation.

The big owners, among whom are Jas. Dunsmuir and the Merrills, big lumbermen of Wisconsin, are said to be determined to break the clause of the act. The new act puts a tax of from $1 to $5, according to scale and grade of timber cut and exported without being manufactured into lumber.

* * *

The delegates from the B. C. Lumbermen's Association have returned from the Winnipeg meeting, where representatives of the Retail Lumbermen's Association and of the C. P. R. met the manufacturers and a conference was held on lumber and freight rates. It is now understood that there is to be a slight reduction in the freight rate from 40 to 38 cents per hundred pounds, so that with a reduction of $1 per thousand the manufacturers have agreed to give, the retail dealers of the Northwest and Manitoba will be better able to compete with the rates quoted from mills in the United States. The attitude of the C. P. R. towards the lumbermen seems to have been rather over drawn in former telegraphic accounts of Vice-President Whyte's remarks on the company going into the lumber business. Evidently that gentleman was speaking in general terms of the desire of the company to foster immigration in the Northwest by looking after the welfare of the settlers. He was reported somewhat literally, and the lumbermen therefore understood that the railway company was going into the saw mill business. One result of the conference is to show very clearly that there is not the enormous profit in lumber which is popularly supposed to be got, when judgment is formed from the large retail prices quoted in Manitoba and the Northwest Territories. That in itself is patently absurd when the freight rates are roughly two-thirds the total retail cost.

* * *

Regarding local hardware markets, there is nothing to be noted this week in the way of changes of prices. Condition of trade for the time of year is very satisfactory.

Vancouver, Feb. 20, 1904.

EASTERN BAR IRON ASSOCIATION.

New York, Feb. 23.—The Eastern Bar Iron Association has been reorganized with all of the old members and several new mills added. Business is reported to be picking up and the first busines of the new association was to advance prices $1 a ton.—The Metal Market.

Window and Interior Displays

Timely Hints and Suggestions

Use Your Own Window.

WITH their window space at their disposal to use as they please, the merchant is too apt to place too low an estimate on its value. Perhaps from a sense of its object, he uses some endeavor to fill the space with the goods he is selling. or it may be from the knowledge that his competitors are doing so. He may dress his window simply because it is there and must be filled, or he may have some faith in its selling powers. But whatever his reason, he too often treats it in a half-hearted way, as though it was a disagreeable necessity rather than a valuable opportunity.

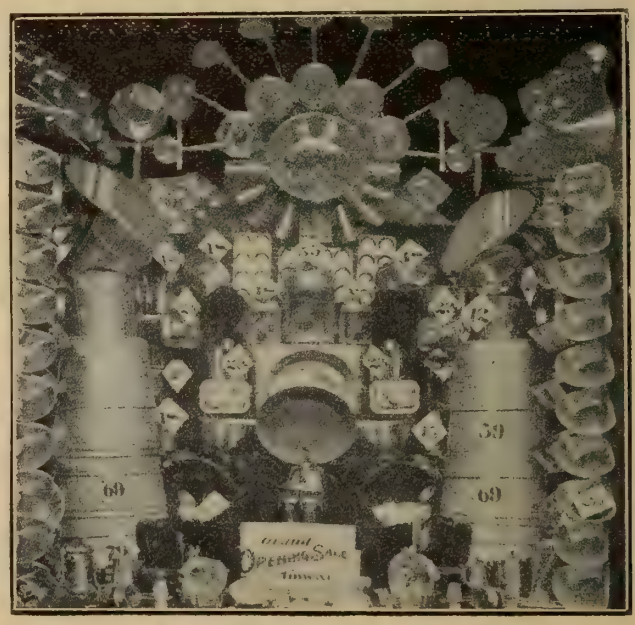
But if a circus is coming to town, or the theatre is engaged for the week, or the church is giving a social, or a lacrosse match is coming off, those who have the advertising of the event to look after are not slow to show how great a value they attach to a couple of square feet of the window space. They know that there is scarcely any method of advertising that is so effective as these few feet they can secure from the local merchants. Almost the first thing they do is to solicit the stores for their permission to post up a few dodgers or bills that tell when and where the event occurs, and a few details in connection with it. They know that there is no spot in town more likely to attract the eyes of the citizens than the show window.

The inconsiderable value placed on the window by the merchant is taken advantage of by these advertising agents, and in most cases they find it of little difficulty to obtain the desired space, providing it is not too large, and the event of such a nature as to interest the merchant himself. The bribe offered is almost always a free ticket in the case of a circus or play, but in local entertainments and games, there is nothing given at all, the agent counting upon the storekeeper's unwillingness to refuse the insertion of such a bill. In fact the poor merchant is in such cases usually held up for a few tickets at the same time.

If the merchant starts to allow this setting up of advertising bills and posters in his window, he will, in some towns, find that he is seldom without one or two defacing his store front. There are many who allow only the insertion of announcements of events of particular local interest, such as a church entertainment or a game, and this is much to be preferred to a promiscuous permission, where a choir concert and a melo drama are advertised side by side. But the only safe method is to forbid the placing of a bill or dodger of any kind. The window belongs to the merchant and is his most useful advertisement,—accordingly it should not be sold at any price, nor given away for any cause. By establishing the precedent of refusing all advertising matter the annoyance of petitioners for a small space will soon be stopped.

If it were for no other reason than that very few of these bills are works of art, and none of them improve the window, it would be sufficient to warrant a refusal. But there is in addition to this the fact that the more space that is occupied by a poster the less space there is to show goods, and the less they are to be seen. Circus and theatre dodgers are invariably an eye sore and no store can afford to have its front defaced with unsightly bits of paper covered with vari-colored pictures that are offensive to the eyes of most of the townspeople.

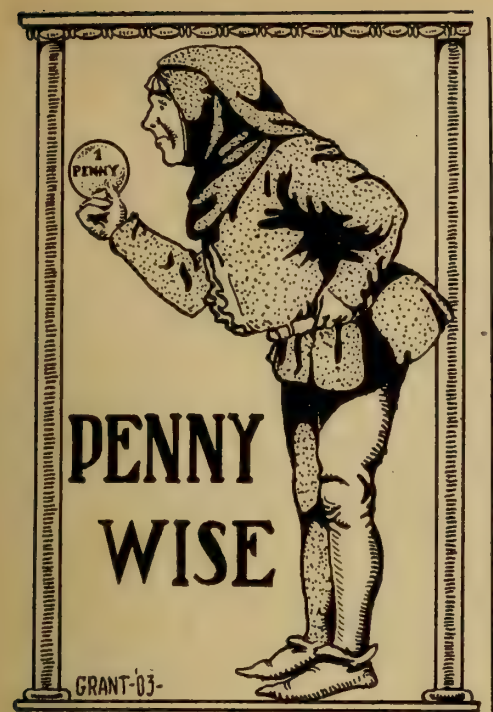
And one of the most serious objections to this disposal of the window space is the losing of caste which results to any store that allows it. No first-class place of business in any town or city will hesitate to refuse any and every agent that calls, for they are well aware of the "cheap" impression given by a window filled with bills. A customer is going to deal where business is business, and where interest in business is displayed at every turn. He will trade where an effort to obtain his trade is apparent, and where events outside of the business circle of the store are kept outside. A store that retains its window space for the purpose for which it was built, will have far greater prestige among the residents of the town than the one that thinks so little of this space that it is willing to dispose of it to any advertising agent that asks forit.



A House Furnishing Window.

This Week's Illustration.

Everything included in the display shown is of particular interest to the housekeeper. Pans, pails, dippers, cake tins, kettles, jelly moulds, etc., are all so closely connected with every woman's housework that she is not very likely to pass the window without a look. The arrangement is quite attractive, and yet simply made. The principal feature is the symmetry observed in the stacking of the timware, this alone being so noticeable as to draw attention. The position of the dippers in the circle at the top is a good finish. Price tickets are lavishly used but not with a poor effect. They are small and neatly printed and not carelessly placed to spoil the general effect. It will soon be the season when every woman will be purchasing largely in everything pertaining to house furnishings, and her kitchen will not be neglected in the attention paid to other lines. Such a window as this can be altered every two or three days without much trouble and yet sufficiently to impress itself upon the public. In such a display price tickets are the main point to remember. Their omission would mean a far less profitable window.



Hold a dime close to your eye with your right hand and a bright silver dollar a few inches away with your left; you cannot see the dollar because the smaller coin obscures your vision.

So it is with some people; in their eagerness to save a dollar they often lose sight of the fifty within their reach.

They would rather have a penny than a pound — if it meant spending the penny to get the pound.

Does the illustration apply?

Are you saving (?) money by not advertising in HARDWARE AND METAL?

IS CONCENTRATED LYE A HARDWARE LINE?

IN a great many towns and cities in Canada hardware merchants are now selling concentrated lye, but there are yet too many hardware dealers who think this is a line that should be handled by grocers entirely. This, we are convinced, is a mistaken idea and while lye is not a heavy line, it is a staple, and is used every day in most homes, factories and offices in Canada.

Besides the many uses for concentrated lye in the household, it is used largely by merchants, butchers, bolt and nut makers, as well as by engineers and painters, any of whom will naturally buy their supplies from a hardware dealer.

Fruit growers use large quantities of lye for spraying trees. They buy their sprayer in a hardware store. Why send them to a grocery store for the lye they require to use in it?

Concentrated lye is put up in neat packages, is a good staple seller, showing a good profit. The natural conclusion, therefore, is that lye is not only a hardware line but a very profitable one.

RUBBER TIRES FOR CARRIAGES.

HARDWARE men should study the value of rubber tires. The great trouble in the past with rubber vehicle tires has not been in the quality of the rubber but in the methods employed in fastening the rubber tire to the wheel. The old method of passing a wire through the centre of the tire was not entirely satisfactory, because the retaining wire eats through the rubber and leaves the tire loose.

The patent controlled by the Dunlop Tire Company is known as the side wire device. Cross bars are vulcanized in the rubber tire, three-quarters of an inch apart. The ends of these cross bars are engaged by a side wire which grips the tire upon the outside, close to the rim of the wheel. This arrangement gives an absolu[illegible]ible fastening, and thus insures good wearing qualities for the rubber by preventing gravel and sand from working in between the rim of the wheel and the inner side of the tire.

REPORTED TIN DISCOVERY IN BURMA.

Loodon, Feb. 22.—Special cablegram to the New York Times: A dispatch from Colombo to the Times says: Col. K. M. Foss stated yesterday that he had been working northward from Mergui, in Lower Burma, to the Siamese frontier, with engineers, and that he discovered deposits of tin equal to those in the Straits Settlements, and likely to add largely to the world's output. There is excellent coal in the vicinity of the deposits.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

SITUATIONS VACANT.

WANTED — Experienced Hardware traveller. To cover Manitoba for firm having good connection. Best of references required. Good opening. Apply Box 103, HARDWARE AND METAL, Toronto. (7 t f)

CLERK—With some experience in hardware business; give age and salary expected. F. Hamilton Co., Limited, Hamilton. (9)

SITUATIONS WANTED.

AS clerk in hardware or general store; 5 years' experience; good references. Apply to Box 105, HARDWARE AND METAL, Toronto. (9)

AGENCY or traveller for hardware, heating, plumbing or sanitary engineers' supplies; 20 years experience; references. Box 107, HARDWARE AND METAL, Toronto. (9)

AGENT — Travelling through Canada, to carry, as a side line, table fancy glass and china. Apply Box 108, HARDWARE AND METAL, Toronto. (9)

PAINT, OIL AND BRUSH TRADES

THE present condition of the paint and oil market will give the retail hardware man good reason to exercise great care in his buying during the next few weeks.

Prices on several lines seem to be demoralized, as may be judged from the range shown in our Toronto turpentine and linseed oil quotations.

White lead, putty, Paris green all show an unsteadiness which betokens a disposition on the part of wholesalers to get trade even at the expense of their margin of profit.

The various houses questioned give no evidence of unusual competition, but it is clear that, in some degree at least, there has been a wide difference of opinion as to the market.

In such a condition it is always well to be able to look for the best prices available, but it is well to be careful to avoid the dealer who under such conditions seeks to get rid of inferior goods at "bargain prices."

Intelligent Painting.

CANADA'S towns and villages present a much more pleasing aspect to the travelling public than they did fifteen or twenty years ago. The variety of tint is for the most part tasteful, but there is still much room for improvement.

The Canada Paint Co. offers the suggestion that the tens of thousands who intend to paint exteriors this season that they have regard, not only to their immediate surroundings,, but, in addition, make their selection from the combinations suggested in their color cards. In this way the user is sure to have a pleasing effect with a certainty of harmony of color.

The present is the thirteenth season since our amalgamated company took up in a vigorous manner the manufacture of prepared tinted paints with suggestions for blending, and every year the demand upon us has exceeded the previous. Our present tonnage represents the equivalent of a gallon of paint yearly to every family in the Dominion. This means paint sufficient to cover the exteriors of 2,000 average sized residences every week. Seeing the work of beautifying goes on so rapidly, the Canada Paint Company venture this hint as to the free use of their suggested color combinations.

Canada Paint Co. Souvenirs.

In the reference in last week's issue to the exhibit of the Canada Paint Co. attention was not directed to the souvenirs which they gave away, an elegant silver elephant to the ladies and a Wostenholme palette knife to the Canadian painters attending the convention. There was a rush for these souvenirs but they were early exhausted.

S. W. P. Representatives.

A typographical error rather mixed things up in our reference to the display made by the Sherwin-Williams Company at the Master Painters' Convention. The representatives of the firm present were: C. C. Ballantyne, Canadian manager; L. J. Fasquelle, manager of the varnish sales department, headquarters, Cleveland; J. W. Benson, Toronto; R. C. Misson and H. C. Lavery, representatives.

Office Improvements.

P. D. Dods & Co., Montreal, have been making some extensive improvements in their offices on McGill street, Montreal. "Island City" paints have been used freely and as the brush has been wielded by a skilful workman the result has been some very artistic decorative work. The feature which catches the eye is the company's trade mark in colors on the ceiling above the manager's desk.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, February 25, 1904.

THE turpentine market is still full of surprises and once again the unexpected has happened, viz., a sharp falling off in quotations. There active condition. This time it appears seems to be no stability to the market and the quotations have been so changeable as the weather. Linseed oil is firmer in England as also is dry white lead, but not sufficiently so to affect actual quotations here. The larger factories are running at their full capacity and stock is being piled up owing to the inability of the railways to make deliveries. "If only navigation were opened," remarked a well known paint maker, "we could easily load up a few barges and we would be glad to do so to relieve our warehouses." There have been some fair bookings of Paris green and kalsomine and the demand for liquid paints bids fair to exceed anything known in previous seasons. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 47c.; 5 to 9 barrels, 46c.; boiled, 1 to 4 barrels, 50c.; 5 to 9 barrels, 49c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Turpentine—Single barrels, 93 1-2c.; 2 to 4 barrels, 92 1-2c. Standard gallon of 8.6 pounds.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.40 to $2.60.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, February 26 1904.

The paint and oil jobbers seem to be taking the advantage of the quiet weeks of February to rearrange their prices to best advantage. Some dealers are making a feature of white lead and quotations as low as $4.35 have been heard, though this is not officially announced. The general quotations are about $4.50 but some houses claim to be getting $4.65. Dry white lead is selling at $4.50. One house is making a feature of its discounts, offering 2 per cent. off at 30 days. This in some cases puts their quotations on a distinct basis. Paris green is 1c. lower all round.

White Lead—Ex-Toronto, pure white lead, $4.50 to $4.65; No. 1, $4.05 to $4.20; No. 2, $3.75 to $3.90; No. 3, $3.35 to $3.50; No. 4, $3.25 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine, in casks of 560 lb., $4.25; ditto, in kegs of 100 lb., $4.50; No. 1, in casks of 560 lb. $3.75. ditto, in kegs of 100 lb., $4.25.

Litharge—Genuine, 5 1-2c.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Pumice Stone—Powdered, $2.50 per 15c. less; in less quantities 30c. extra, cwt. in bbls., and 4 to 5c. per lb. in less quantity; lump, 10c. in smal lots and 8c. in bbls.

Linseed Oil—Raw, 1 to 2 bbls, 48c.; boiled, 51c.; 3 to 5 bbls, raw, 47c.; boiled, 50c.; 6 to 9 bbls., raw 46c.; boiled, 49c., delivered, Toronto, Hamilton, London and Guelph. One firm is quoting raw, 1 to 2 bbls., 47c.; boiled, 50c.; 3 to

Send us a post card and let us tell you all about it.

ANCHOR LIQUID PAINT

Introduce it to your customers and it will make its own way. For years it has been on the Canadian market and has always given satisfaction.

The only white lead used in its manufacture is the world's standard —BRANDRAM'S B.B. GENUINE.

Made in Canadian factories by Canadian workmen, with Canadian capital.

HENDERSON & POTTS, Limited, Halifax.
HENDERSON & POTTS CO., Limited, Montreal.

A Word to Hardware and Paint Dealers.

A writer in one of the leading trade papers states it about right when he says: "There is no loss which is more serious, more discouraging than the loss ensuing from unsalable goods, or from the sale of goods which are so inferior as to annoy and even drive away customers buying them."

That is one point we have been trying for years to impress on the minds of Canadian Hardware and Paint Dealers, and yet occasionally a dealer is pursuaded to stock goods that have no record of merit nor proof of origin, and for which there is absolutely no call. Why do this, when

Church's Cold Water

ALABASTINE

so well and favorably known, and for which there is a large and growing demand, can be had from all hardware and paint jobbers, and at a price that affords a fair margin of profit? No danger of loss on account of unsalable goods when you stock ALABASTINE. The sale of it to a customer is an invitation to come again, and the results of the purchase are so pleasing that it establishes in the mind of such customer THAT YOURS IS THE PLACE to buy goods that are all right.

Plain talk to practical people, but do not our statements conform to your experience? Stock ALABASTINE—We help you to sell it!

THE ALABASTINE CO., Limited, PARIS, ONT.

Window Glass.

MONTREAL.

The remarks made in our last issue still apply. There has been no change in price and trade continues on the quiet side. We quote as follows: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

O. C. Smith, general merchant, Deloraine, has sold out to S. K. Colquhoun.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by John C. Kirkwood, TORONTO.

NOTE—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Kirkwood specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Advertising Success and Failure.

EVERY succeeding year sees a growth in the volume of advertising. Some of those who can't or won't see the business side of advertising now will have their eyes opened next year. Advertising is a new force in getting business and it is not to be expected that it will be employed by everybody straightway. There was a time when the coal stove was looked at askance; when the self-binder was an experiment; when the stem-winding watch was regarded with distrust. The conversion of men to new things is a slow process, and perhaps it is well that it is so.

The men whom it is the most difficult to persuade to take up advertising as a business force are those who have memories of the "good old days" before the advent of modern advertising, and with a fine loyalty to the customs of the past they hold out against the newer order of things.

It must not be thought, however, that it is only the older men who see only waste in using printers' ink to get business. There are many young men who have made up their minds on the subject, and who wouldn't give a snap of the fingers for all the newspaper advertising in the land. To both these classes arguments to support the efficacy and value of advertising are vain.

There are others who are open-minded, willing to be educated in the matter of advertising, with legitimate doubts, with inquiries that as yet have not been answered, and who are not advertising simply because they have not seen that advertising is all that is claimed for it as a business factor. Such men constitute a hopeful class.

There are yet others who have advertised, so they assert, and who have obtained no results; therefore, they say, advertising is "no good." There were men who tried some centuries ago to find a passage to the Far East by way of the Atlantic Ocean. Many of these navigators failed in their efforts, yet Columbus succeeded where they failed,—did not succeed in finding a highway to the Orient, but nevertheless succeeded, and discovered a new world. Because some fail is no reason why there should be failure. Why men fail is a subject for study, for inquiry.

The failures in advertising are traceable. It may be that the newspaper is at fault, in not providing an adequate circulation; it may be that the advertisement inserted in the newspaper was of such a character that results from it could not be expected. Possibly the advertisement remained unchanged week after week, month after month. I have before me an advertisement in an Eastern Ontario newspaper that contains an announcement that a certain hardware dealer is supplying ice cream freezers and fly screens. This advertisement has been running so for months past. In the town where this man does business is another firm in the same general line of business who are known for many miles beyond their natural territory and whose business has grown into wholesale proportions. This latter firm advertise,—a fresh statement each week, and one timed to the needs of each particular season.

Some advertising does not pay because it is not trusted. The merchant who writes the advertising is able, it may be, to prepare a most tempting advertisement; it fairly bristles with well said and well set news; it suggests needs that before were not felt; it crystalizes indecision into action. The buyer finds alas! upon going to this store to make a purchase that the advertisement deceived him; that his expectations are far from being realized; that misrepresentations were made. Confidence is lost not to be restored, and the sinning merchant may use whole pages and a barrel full of adjectives, red ink and pictures, without avail.

Advertising to prove effective must be persistent. The occasional announcement is not impressive. If advertising is good at all, it is good all the time. The man whom one meets and listens to oftenest is the one who is heard and heeded. There are other reasons why advertising does not pay, but there are few reasons, if any, why advertising cannot be made to pay. If this business factor is to be productive, it must be attended to. Neglect in this direction is not only folly,—it is worse, for it is waste. The man in business should work with all his might at his business quite as much as the toilers in other directions. And one of the mighty engines at his command and set for his use is advertising.

——

Trouble Saved by Not Advertising.

The modern merchant who never advertises escapes a lot of trouble, says the Retailer and Advertiser. He may keep out of some of it without intending to do anything of the sort, but he escapes it just the same. He gets rid of the trouble of preparing advertisements, and, of course, has no worry about changing them and keeping them fresh and up-to-date. He is not bothered about the way his advertisements are printed, nor the position they occupy. He can say, with much truthfulness, that it is no trouble to show goods, for he is seldom asked to show any. But his greatest saving of trouble is in not having to sell goods to people who stay away, but who would come to his store if he advertised. Then, as he sells few goods, he has few goods to buy, and there is more trouble saved. He never has the trouble of selecting and paying a large staff of assistants. He gets rid of the trouble of having to pay for advertising. Finally he never has the trouble of enlarging his store, or of removing to a bigger one, and it is very little trouble to count his money. Strange, what a lot of trouble a merchant makes for himself by advertising!

STOVES AND TINWARE.

Soldering and Plating Aluminum.

BURGESS & HAMBUECHEN show the great influence which the ever present thin, invisible film on an aluminum surface has upon the success of various operations, says an electrical paper quoted in the Journal of the Franklin Institute. The film is supposed to have considerable strength and continuity, and if it is broken or removed by mechanical means the aluminum immediately forms a new one. In soldering aluminum the principal difficulty seems to be due to the failure of the alloy used as a solder to adher to the aluminum, a condition attributable to the protective film, which must be eliminated before the metals can unite. A successful solder consists of about 21 per cent. of zinc, 76 per cent. of tin and 3 per cent. of aluminum; it may be applied directly to a cleaned aluminum surface without the use of a flux, and at a temperature but little above that which is necessary for soldering copper or iron.

There are certain advantages in the apparent complication which the use of a flux involves; a suitable solvent for the oxide film increases the rapidity of the soldering process, increases the certaintv of adhesion and enables cheaper soldering mixtures to be used. The requirement for such a flux is that it should dissolve the coating and leave a clean surface for the solder to unite with, upon application of heat; it seems that water cannot be a component of a suitable flux. A material which, for certain solders, forms an admirable flux, is stearic acid; by applying it to a freshly scraped aluminum surface and then applving a tin-lead-zinc alloy, the matter of soldering aluminum presents scarcelv greater difficulties than does the soldering of other metals.

This almost ever present coating upon aluminum is also the source of difficulty in the deposition of a permanent coating of other metals upon aluminum surfaces; while it is very easy to deposit a layer of metal upon aluminum from almost any plating solution, in the great majority of operations the resulting coating can readily be removed, sometimes in remarkably thin and continuous layers. The prime requisite in successful depositions on aluminum is the complete removal of the protective film, so that the electro-deposited metal may be applied over the complete surface of and in intimate contact with the aluminum; if this condition is fulfilled, and the coating is nonporous, it will be durable.

The converse of this operation—i. e., the electro-deposition of aluminum upon other metals—appears to be impossible from aqueous solution. From the fact that, for equal weights, aluminum possesses about four times the energy as does zinc, considerable attention has been given to the problem of substituting aluminum for zinc in primary cells; but as a matter of fact aluminum does not behave well as the electro-positive metal of a battery and attempts to use it in practice have almost universally failed. The results of measurements made bv Mott of the potential of aluminum in various electroytes (measured against a normal electrode) are given in diagrams and tables. It appears that, of the various materials tested, ammonium fluoride would be the best material to use in connection with aluminum for battery purposes.

A Point of Honor in Buying.

THE following story was told before a meeting of retail hardware men by a Southern traveller: "I wish to relate a circumstance which occurred during the time the St. Louis graniteware wasselling at the contract price of 40 and 10 per cent., this price not to be cut under any circumstances. I was taking an order for a bill of these goods, when, in the midst of it, the buyer stopped and said: 'By the way, Jones, what price do I get on this ware?' I told him it was all in at 40 and 10 per cent., it being contract price, and the house would not bill it at less than that? He said he had been getting an extra 5 per cent., the salesman giving same and paying it out of his own pocket. I said to him: 'Is it not a fact that you are a leading member and deacon of the Methodist church, also superintendent of the Sunday school?' He replied that he was, but wanted to know what that had to do with buying graniteware. I told him that it was just such deals as that he was telling me of that sent many a good fellow to the pen. By rebating out of their pockets they gave away their salarv and when their wife needed a little money, were obliged to get colorblind and not be able to tell the firm's money from their own. The first thing they knew they were short with their firm, and must either make the shortage good, go to Canada and leave their happy home, or to the pen for a season.

"After listening to this heart-rending speech the merchant said he had never looked at it in that light, but since I had mentioned it he remembered of one good fellow who had done that kind of work and travelled the route I had mentioned, and gave me the order."

Extending Their Lines.

The Western Foundry Co., Wingham, Ont., are adding to their lines for this year several new patterns, including both cooking and heating goods. These lines they hope to have completed in a few weeks and they invite the trade to write for full information re them before buying for fall requirements.

CHECK PERFORATOR.

ATTENTION is called to the advertisement in another column of the Canadian General Purchasing Agency. This firm are advertising a simple and inexpensive indelible check perforator which makes it impossible for a check to be raised. In these days when so great a proportion of accounts are settled by check some such machine is not merely useful, it is really indispensable to the great majority of business men. A man may know and trust another to whom he pays a check, but he cannot know through how many different hands his check may go before it reaches the bank. This check perforator is, therefore, an insurance of one's bank account and surely one's bank account is as well worth insuring as one's life, therefore, an insurance of one's bank account and surely a bank account should be insured as well as one's property or life.

The machine is very simply operated. A half minute's time is all that is required to make a check perfectly safe. The machine will indicate the amount of the check with perforated figures and will ink the holes through the fibre of the paper with an indelible acid proof ink absolutely preventing any change of the amount. Absolute protection is afforded by this machine at small cost. Full particulars may be obtained by writing the Canadian General Purchasing Agency, Montreal.

HEATING AND PLUMBING

PLUMBING PRACTICE UP-TO-DATE.

By Lewis Le Grow, Toronto.

THE plumber has always stood for one who works in lead; the name stands for the same to-day, but it has advanced to a position where it not only represents one who works in lead but also one who is responsible for the health of the community more so than any other, and as it has been stated that there is nothing new under the sun, plumbing as we find it to-day is a contradiction of that statement.

It is not long since that plumbing was looked upon as the least important part of a house. It was considered quite up-to-date to have a 4-inch tile drain, extending from sewer on street to the most convenient point and then to run branches to different houses without respect to what basements it went through, or how complicated it might be constructed. Once an obstruction occurred in main drain all properties dependent on it suffered in consequence. To-day every house must have its own drain carried outside of foundation walls.

Light soil pipe was universally used to bath room, then extended with galvanized iron through roof with slip joints. Every fixture in the bath room would be connected into heel of closet bend and it often connected to soil pipe with a putty or rust joint. Then for the finishing of the job, Pan-Hopper or Demerst closet was considered quite a luxury, but on no condition was any part of it to be exposed that might allow the free circulation of pure air which in the opinion of many was not so important as every thing boxed in and painted so that microbes and other parasites might the better increase.

With the advance of practical and technical education, laws have been adopted to compel people to appreciate good plumbing. Our improvements have affected all fixtures and condition of work, the most important being our system of backventing and syphon jet closet.

We will briefly notice the most important article of plumbing construction, namely, traps. A great many have been placed on the market, but from experience I find that traps with internal partitions are most dangerous. A flaw may exist in this partition above the water line and allow gas to enter the house. When we consider that it is not the depth of seal that offers the most resistence to syphonage, but the amount of water and that it is the depth of seal and not the amount of water that offers the greatest resistence to sewer gas, it is very important that the trap should be well made and work on the centrifugal principal with a back vent to relieve the trap from the pressure of sewer gas. The main trap in the sewer in my opinion should not

Lewis Le Grow, Toronto.

be tolerated, it prevents the ventilating of sewer through the main stack and it also acts as an impediment to the flow of sewerage.

House drains should carry waste out of the house—not much nor little, but all—and do it promptly, when that which is intended for the street sewer is started on its journey it should be afforded a means of reaching its destination at once and without interruption, not a particle of filth should be allowed to cling to the sides of waste pipes nor be held in solution in some trap until it begins to decompole and give off its dangerous gases.

Kitchens of hotels and restaurants should have a grease trap situated in an open space and easily to clean out, all back vents on bath traps should rise perpendicular through the floor and not be bent so low on the trap as would allow any particles of waste matter to accumulate around its opening and stop the free ingress of air. When this occurs there is danger of syphoning. Where vent from traps connect with wrought iron pipes square elbows should not be used, angle fitting are the only perfect connection. Water closets such as the Richelieu and improved Sanitary should not be used on sanitary work owing to the vent being made a part of the trap and crockery is not a safe thing to connect with lead, the vent being rigid any settling of the floor or movement of the fixtures is likely to break off the vent horn. And to prevent any settlement of soil pipe, it should rest on a foundation of brick or stone properly built by a mason. There are too many stacks of soil pipe connected with the tile drain allowed to rest on a bed of sand supported only with iron hangers. We have all had experiences of a very unpleasant nature from hoar frost accumulating at top of 4-inch soil pipe above roof, stopping the ventilation of the fixtures and causing syphonage, allowing sewer gas to saturate the room in a short time. All soil pipe passing through the roof should be increased to 5-inch from underside of same.

Another part of very great importance to the health of the people is the proper construction of a cesspool. It should be so placed that the liquid from it into the surrounding soil may not affect the water supply or leak into the cellar of the house. It should be located at a lower point than either the house or the well. When properly built of brick or stone with loose joints, with drain tiles to distribute the water, leaving behind the solid matter which should be removed when necessary, we will find the sanitary arrangements equal to our city sewerage system.

The improvements of water closets have been remarkable, thanks to the energy of our manufacturers and the healthy competition amongst us to introduce to our customers the very best appliances. The syphon water closet takes first place to date. The energy of the flush is exerted without loss under atmosphere pressure; it produces complete syphonage. In the washout closet before the trap is reached much of the energy is wasted. Water closets constructed in basements should be arranged with a due regard for the effects of the sun, for there is no disinfectant so

sure as sunlight and ventilation. Local vents should always be connected directly with the closet bowl to be of the most practical benefit, and where it connects with the chimney it should run into a piece of iron pipe as galvanized iron in time will become rusted.

A great source of trouble in our homes which we fail to be conscious of is the refrigerator. Into it is placed the important things of life and it is surprising how little attention is paid to the proper disposal of the waste water. It should be conducted into an open pan or sink, placed some distance from the end of the waste pipe, with a good air space. This fixture properly trapped and vented and supplied with faucet would remove a great source of unpleasantness.

House drainage at the present time consists of two parts, soil and waste pipe above ground, and tile drains under ground. For each part there are different tradesmen, the plumber taking care of work above ground, the drain men that below the ground. The connection of soil pipe with the system of drainage belongs to the plumber, and he is responsible for the same. This connection has to be made with cement, and the most important of all, for it is covered up and not likely to be seen again until trouble occurs in the drainage. If then it is admitted that iron pipe free from all defects is necessary above ground, is it not of more importance that the same soil pipe should continue uninterrupted to a point outside of the foundation walls.

In this city materials out of which house drains have been constructed have remained the same while other improvements were being made, and it is time that we should take the initiative and have our drainage system placed in a proper position and constructed of material that the first cost will be the only one, and that the interest of men engaged in the building business and the men engaged in the manufacture of tile pipe must take second place to the

health of the people. The ordinary tile drains must be discarded since they cannot be secured against breaking and defective joints. Perfect joints and not mere increasers must be used between sections of drains and soil pipes inside of any building. The removal of main traps and the purification of sewer gas that is the most poisonous, namely, sulphureted hydrogen and sulphride of ammonium.

It is not extravagant to talk about a perfect system of drainage since lasting material can be used. There is no more reason why there should be perishable material used and defective joints made in house drains than in the pipes which convey the gas. The latter are air tight and gas tight; so should the former be. House drains should be recognized as a part of a house, not as something that will be covered up and not of so much importance. The supervision and the construction of house drainage should be put under the direction of the responsible and practical plumber, and not as at present to any man who can do it the cheapest.

It appears very simple to those who take no further thought of it that the essential element in plumbing is the ventilation of the sewers, but conditions and details of actions require to be studied, taking into consideration the disregard many people have for the plumbing fraternity, and it will be necessary for us to use scientific knowlege and practical experience to improve the sanitary comforts for all conditions. A united co-operation between the medical, architectural and engineering societies, lead on by our own professional plumbing and heating engineers, we might yet see the day when we will fully realize that an Omnipotent Providence has placed on us a responsibility of educating the indifferent to an understanding that the highest material things in life are cleanly surroundings and a pure system of ventilation.

Toronto Master Plumbers Meet.

THE regular open monthly meeting of the Toronto Master Plumbers' Association was held on the evening of February 22, in the rooms of the association, Richmond street, West.

The feature of the evening was the reading of a valuable paper by L. LeGrow on "Plumbing up-to-date," which, on account of its comprehensiveness and wealth of suggestions, has been reproduced elsewhere in this issue of Hardware and Metal.

Among the manufacturers and supply men represented were :

A. A. McMichael, of the James Robertson Co.

P. McMichael, of the Dominion Radiator Co.

H. W. Anthes, of the Toronto Foundry Co.

W. L. Helliwell, of the Gurney Foundry Co.

R. J. Means, of Cullen & Johnson.

W. L. Spence, of the Ontario Lead & Wire Co.

W. Linton, of the Standard Ideal Co., Port Hope.

W. S. Jackson, of the Ideal Co

All these gentlemen gave expression to the utmost felicity existing at present between the master plumbers and the supply men. One speaker remarked that the manufacturer and plumber had no grievances; the lion and the lamb might lie down together with absolute impunity.

A. A. McMichael, on behalf of the manufacturers and supply men, extended an invitation to the master plumbers to pay them a return visit one month hence when he promised the manufacturers would recite for their benefit the "Story of Life." The acceptance of this invitation by the master plumbers was moved by Mr. Mansell, seconded by Mr. Meredith.

It was hinted that the meeting might assume the form of a debate on some subject pertinent to the plumbing trade, but the final arrangements were placed in the hands of a committee comprised of representative plumbers and supply men and manufacturers.

The evening was pleasantly interspersed with songs and recitations and was not brought to a conclusion until a late hour.

Ottawa Master Plumbers Meet.

The regular annual meeting of the Ottawa Master Plumbers' Association was held recently. In order that the requirements of the times may be better served the organization has revised its code. The retiring officers were :

President—F. G. Johnston.
Vice-President—Gil Julien.
Secretary—H. A. Knox.

The retiring president, on behalf of the association, presented the retiring secretary with a smokers' set as a mark of esteem of the ability with which he has carried on his duties. The following officers were elected for the ensuing year :

President—Gil Julien.
1st Vice-President—D. O'Connor.
2nd Vice-President—A. Langelier.
Treasurer—Wm. Northwood.
Secretary—T. Blyth.
Sanitary Committee—J. Livock, J. R. McLennan, J. McKinley, Mr. Martel, Mr. Normand.
Auditors—C. Watt, H. A. Knox.
Tyler—P. I. Bois.

Will Hold a Conference.

At the meeting of the executive of the Provincial Association of Master Plumbers on February 18, it was decided to ask the supply men to meet the executive committee of the Provincial Association in Hamilton, the day before the annual convention, which begins there on Good Friday next, April 1. The secretary, Mr. Meredith, was instructed to draft a letter to this effect and to forward the same to the supply men. The convention will last two days; Friday and the Saturday following.

Building Notes.

A four-room brick school is to be built in Sarnia. J. W. Smith is chairman of the management committee.

Tenders are being called for the erection of a brick church in the Township of Charlotteville, Ont., by H. W. Cook, Atherton, Ont.

Tenders are being called by P. McAra, Jr., for the erection of a Presbyterian church at Regina, N. W. T. The building will be of brick on stone foundation; the seating capacity is to be 1,000.

Building Permits Issued.

MONTREAL.

Joseph Villeneuve, 298a Meutana, for alterations to 1951 Labelle, to cost $700.

A. Robertson, Dufresne Ave. and Lalonde, for alterations to same building to cost $900.

Dr. D. C. McCallum, 57 Union ave., for alterations to 45 Union avenue, to cost $6,000.

Mrs. F. A. Dubuque, 1171 Sanguinet, for alterations to 80 St. Felix, to cost $500.

TORONTO.

Dr. Taker, a two storey and attic brick dwelling on Dundas street, near Arthur street, to cost $3,000.

E. Ockley, a pair of semi-detached two storey brick dwellings, on Lansdowne avenue, to cost $4,500.

H. G. Muntz, a pair of semi-detached two storey brick dwellings on Concord avenue, to cost $3,000.

Mrs. S. J. Graydon, a pair of two storey and attic brick dwellings on Huron street, to cost $7,000.

Mrs. S. J. Graydon, a two storey and attic stone dwelling on Huron street, to cost $4,000.

Joseph S. Montgomery, three attached dwellings on the corner of Euclid avenue and Harbord street, to cost $8,000.

Geo. Wallis, a two storey and mansard addition to store on College street, to cost $2,000.

BUILDING AND CONTRACTING NOTES

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE National Typewriter Company, Limited, Toronto, have been incorporated with a capital of $40,000, to manufacture and deal in typewriting and other machines, office furniture and office supplies. The directors are: F. H. Hurlburt, W. A. Mills and Wm. York, all of Toronto.

The Department of Public Works, through Fred. Gelinas, secretary, is calling for tenders, to be received up to March 11, for the construction of an extension to the government wharf at Sault Ste Marie, Ont. The plans and specifications may be seen at the office of H. A. Gray, Confederation Life Building, Toronto.

Cement, Stone & Building Co., Limited, Toronto, have been incorporated with a capital of $50,000, to manufacture and deal in all kinds of building materials and builders' supplies, and to erect all kinds of buildings. The directors are: W. D. McVey, H. H. Thompson, R. Taggart, R. M. Young, and Wm. McBean, all of Toronto.

The Deep Oil & Gas Co., Limited, London, Ont., have been incorporated with a capital of $100,000, to produce, manufacture and deal in crude or refined petroleum oil, other oils and natural gas. The directors are: L. Teskey, Toronto; C. E. J. Smith, and L. E. Smith, A. Elliott, A. T. McMahen, all of London; and E. C. Teskey, St. Thomas.

Vermilion, Assiniboine & Saskatchewan Land Co., Limited, Toronto, have been incorporated with a capital of $200,000, to carry on a real estate business. The directors are: Col. S. Hughes, Lindsay, Ont.; Hon. R. P. Roblin, and E. L. Taylor, both of Winnipeg; J. J. Main, L. C. Bull, W. P. Bull and T. H. Hamilton, all of Toronto.

Notes.

The Carter-Crume Co., Limited., have increased their capital from $1,975,000 to $2,050,000.

Petrolia Torpedo Co., Limited, incorporated by the Dominion Government, have been granted a license to carry on their business in Ontario.

The Canadian Elevator Co. will erect an elevator at Fort William, Ont., with a capacity of 1,500,000 bushels.

The John Goodison Thresher Co., of Sarnia, Limited., have increased their capital from the sum of $99,000 to the sum of $300,000.

Novi-Modi Costume Co., Limited, incorporated by the Dominion Government, have been granted a license to carry on their business in Ontario.

J. H. New, of Toronto, has purchased the entire capital stock of the Hamilton & Toronto Sewer Pipe Co., Limited, of Hamilton, Ont. The price paid was $112,000.

The National Cash Register Co., incorporated in the United States, have been granted a license to deal in cash registers in Ontario, provided that they do not use a larger capital than $40,000.

The annual meeting of the National Cement Co., Limited, of Durham, Ont., was held in the Temple Building, Toronto, recently. The reports showed the liabilities to be in excess of the assets by $86,936.75.

Osgoode Dairy, Limited Toronto, have been incorporated with a capital of $40,000, to carry on a dairy business in all its branches. The directors are A. Graham, F. J. Ferguson, and Geo. R. Geary, all of Toronto.

E. G. E. Folkes, manager of the Wilkinson Plow Works, Toronto Junction, proposes to organize a company for the manufacture of wagons at the Junction, the site to be next that of the plow works. He contemplates having the company organized by Spring.

The Bailey Cutlery Works, Brantford, Ont., have been closed down for good, and the machinery has been sold. The industry was forced to close down about two months ago, because, it is said, of the slaughter prices of American firms, and it has not been reopened.

Hennepin Securities Co., Limited, incorporated in the States, have been granted a license to carry on in Ontario a real estate business, provided that in doing so the company do not use a capital larger than the sum of $50,000.

Jas. Ross, president, J. R. Watson and F. L. Franklyn, both directors, of the Dominion Coal Co., were in Sydney recently in order to inspect the company's collieries, one of the chief objects being to look over the site of the new mines the company propose to open in the Summer.

Geigy Aniline & Extract Co., incorporated in the United States, have been granted a license to manufacture and deal in anilines, dyestuffs, colors and chemicals, in Ontario, provided that in so doing they shall not use a larger capital than $40,000.

The Tuf Sole Shoe Co., Limited, Toronto, have been incorporated with a capital of $50,000, to manufacture and deal in shoes, boots and rubber goods. The directors are: B. L. Kennedy, P. M. Goff, J. W. Phillips, and S. I. Kennedy, all of Toronto.

A. B. Ormsby, Limited, Toronto, have been incorporated with a capital of 100,000, to carry on the business of a building contractor, and also that of a manufacturer and engineer. The directors are: S. N. Ormsby, A. B. Ormsby, T. A. Rowan, N. S. Lackie, and E. Lackie, all of Toronto.

The Double Use Mitten Co., Limited, Dundas, Ont., have been incorporated with a capital of $100,000, to manufacture and sell all kinds of gloves and mittens. The directors are: H. G. Smith, C. H. Frost and H. C. Gwyn, all of Dundas, Ont.

The Toronto Furniture & Supply Co., Limited, Toronto, have been incorporated with a capital of $100,000, to manufacture and deal in all kinds of house furnishings and supplies. The directors are: T. Clarke, T. Walker, and W. H. George, all of Toronto.

The Barnett & Record Co., Limited, incorporated in the United States, have been granted a license to carry on in Ontario a general contracting, building and mechanical engineering business, provided that the company do not use a larger capital than $25,000.

It is reported that a strong syndicate of Canadian and American capitalists, headed by H. M. Whitney of Boston, have been formed to develop and operate the extensive sub-marine coal areas at South Head, Port Morien, N. S.

The smelting works of the Canadian Copper Co., Copper Cliff, Ont., have been damaged by fire to the extent of $150,000. Arrangements have been made to use the mond smelter at the Victoria mines until the works can be repaired.

of Felt as per cut along side will be mailed to any merchant who writes and encloses two cent stamp (for postage) to the agents of

H. BOKER & CO.

P. O. Box 366 - - MONTREAL.

CURRENT MARKET QUOTATIONS.

February 26, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

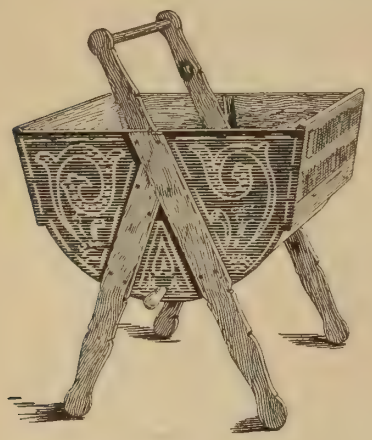
Representing British and American Manufacturers. Correspondence invited from firms wishing to be represented in Canada.



CONNOR'S IMPROVED WASHING MACHINE.

The rubbing board in this washer works eccentrically on the clothes in such a way that it both rubs and squeezes the clothes with every stroke of the rubbing board.

LARGEST CAPACITY. STRONGLY MADE.
NEATLY FINISHED.
THE BEST FOR THE MONEY.

We have nine other kinds, send for our catalogue.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

The People Want

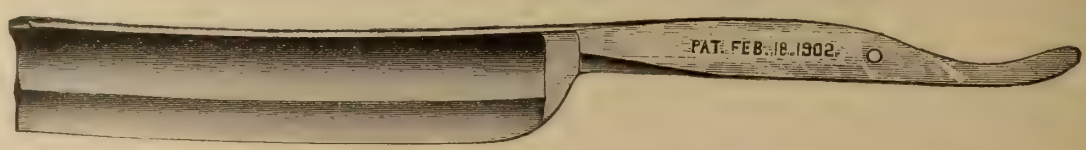
WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

EVOLUTION IN RAZOR GRINDING.

English full hollow ground.



German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has twodistinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

GEO. W. KORN RAZOR MFG. CO., *LITTLE VALLEY, N.Y. U.S.A.*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

Credits in the Hardware Store*

THIS matter of credits is one common interest that permeates every kind of merchandising in the State of Iowa, in the greatest degree. Every style of merchandising counts this its greatest burden and greatest contention. Further than this, it is perhaps the one item of our business that 95 out of ever 100 men cannot abolish, for reasons which are not asked for here. I expect there are 95 per cent. of the men here who could cut out the stove business and yet make the hardware business pay; 95 per cent. could discontinue the furnace business and yet make a living; 75 per cent. could close up the tin shop and make as much money, and so we could go on through the lines that make up our business, but can you eliminate that nightmare, credits? I don't believe in the State of Iowa one-fourth of the hardware dealers could cut out the credit business and live, do you?

Inasmuch as this subject is a universal part of the hardware dealer's stock in trade, the success or failure of its rank and file must, to a greater or less degree, be traced to its successful or unsuccessful management. I can hardly believe that a poor collector ever made a success in the hardware business; that is, a success worth speaking about, but I have had pointed out to me successful merchants, and invariably it was conceded, "He was a good collector," or "Wise on credits."

The merchant is in business to sell goods; that is his way of making money. In this age of high living and strenuous life every purchaser does not always have in hand the "Lady on Silver" to supply his requirements. Mr. Merchant looks into the future and carries his friend on his requirements, real or imaginary, expecting the coming of a settlement date. He does this for a number of reasons; first, he wants the business; second, he wants a big business; third, he wants a bigger business, and unless, just here, he tightens on the reins and cracks the whip in the right place the end of the year may find him with more business and less money than is really satisfactory to himself, to Mr. Dun or Mr. Bradstreet.

As business grows and clerks increase in number, dangers more hazardous creep into the hardware business, for every man that is a vender of merchandise for you has friends. Now that is good, for it means business; but in parentheses we must add, also, credits; and my experience is that few clerks or partners who have nothing to do with the last end of the credit business have commendable discretion at the front end. There should be rules laid down for clerks and partners, as to who and how much they may credit; also if they be allowed to open accounts. In passing, I might say that improper and incomplete charges cause misunderstandings and losses in accounts, also losses in patronage, which are altogether without excuse.

A charge should be entered plainly and complete, always stating, by a system of abreviations, when possible, who ordered or got the article. This is only a small item but classifies as starting right. Let us change an adage at this point: "Accounts well opened are half closed." I think this well taken. It is poor policy to hand over items of any amount promiscuously, saying nothing about a settlement date. This applies especially to items of size and to persons who have comparatively little knowledge or system in their business. Don't urge the man of lax business methods to buy on credit, and never, unless you make him understand that at a certain time you want the money. In this connection I might add that a lease or contract does not end or eliminate all the trouble. If you will visit the rear door of the installment house and watch them unload their wagons as they bring back articles of every description you will be convinced that a man's signature does not always collect the account, but you will find in many cases that your trouble has just begun; however, leases and contracts are good, and are one of the aids in the conducting of successful and safe credits.

Besides the education of your clerks and partners there is the education of the masses; and if every merchant would put his shoulder to the wheel on this problem collections would be easier for all of us. It is a mistake to carry the impression to your trade that you have lots of money, and they need not be in a hurry to settle their accounts. This is all right for a few of you rich men, but the sooner you quit this practice the easier it will be for the big majority of us, who need the money, to look after our collections. A regular system of statements should be put in force and scrupulously followed. This will soon educate your trade to know that they are expected to pay your account.

I wish at this point to add one item that I have not heard much agitated, although it may be old to some of you. You will agree with me when I state that the majority of successful hardwaremen are endowed with the sixth sense in the conduct of their business—namely, Anticipation. Do we not anticipate the market? Do we not anticipate the season's wants? Don't we sometimes anticipate financial crises? To all of these and more, you will answer, yes; but let me ask you what percentage of merchants anticipate credits? Why don't we anticipate and get early returns on a man's credit standing when we are introduced to the new arrival in the city? I believe that the biggest item of neglect in the management of the credit department of our business is that we don't seek out our customers beforehand. Let your clerk hand in the name of the young man he met on his last evening out in society. Look up the new lodge member, or the man who joined your church last Sunday. Make this list as large as your mailing list; yea, there is a good place to commence to seek out sources of accurate information; make the list to include men and women, young men and maidens, the hired man and the servant girl, as well as the corporation and partnership. Have a complete list at your desk; require your men in your

* Address by Frank R. Currie before the Iowa Retail Hardware Association.

employ, by study, to know your instruction on individual names and act accordingly. After this research has established a conviction and resolution stand by it. Don't let the desire for business, friendship, sympathy or any other motive cause you to go back on your research and best judgment.

In closing let me say, in my judgment the successful conduct of a credit business depends on its management in the sales department, as well as good methods in looking up and closing accounts. There are lots more fascinating books than our ledger, but sound business sense tells us that not only our bread and butter is there, but considerable pie and cake. I hope now that those of riper years and tried judgment can add practical experience to this hour which will give us all inspiration and good suggestions for the conduct of our business. While this edge of the business I take to be the least attractive of any, it must have attention.

THE TELEPHONE THAT REMEMBERS.

Mr. Ernest George Craven, an English civil engineer, who used to work for Mr. Edison, has invented a telephone which records its messages permanently. He started with the theory that the sound-giving diaphragms of telephone and phonograph are substantially alike. In both instruments, a diaphragm is set moving by sound-waves. In the phonograph, this motion is impressed on a wax cylinder, which preserves it and can give it back to the air as sound. In the telephone, the motion of the diaphragm is changed first into electrical impulses transmitted by a wire, and then changed at the other end into corresponding diaphragm movements, which reproduce the sound. Mr. Craven's problem was to make telephone and phonograph work in electrical unison. His instrument, called the electograph, has sent and recorded messages successfully over ordinary telephone wires, though as yet only at small distances. It needs some mechanical improvements, but these will be easy to make. The telephone that remembers—a good many persons may much prefer a telephone that forgets.

STOCK FOOD A GOOD LINE.

J. A. W. Allan & Co., hardware dealers, Newmarket, Ont., who handle "Colonial Stock Food," write: "We consider it a good move on our part when we introduced stock food into our business. Have sold a lot of it and our customers seem to be well pleased with it. It also pays as well as any part of our business."

CATALOGUES, BOOKLETS, ETC.

HARDWARE AND METAL would be pleased to review catalogues, booklets or other such publications issued by manufcturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. No charge will be made for these services.

GLOBE PAINTS.

The Globe Paint Co., Toronto, have booklets giving specific information regarding their machine paint filler, for all kinds of machinery and tools; Globe varnish stains for staining and varnishing at one operation; Globe implement paints, for wagons, trucks and other implements; Globe liquid coach colors; Globe agate floor finish, for staining and varnishing at one operation; Globe elastic carbon paint, for barns, bridges, roofs, and other ordinary painting; Globe superior floor paint, and Globe prepared paints, for general purposes. In addition to these they offer to the trade a booklet dealing with their quick drying coach colors and varnishes. Readers of Hardware and Metal are invited to send for these booklets.

ERIE SPECIALTY CO.

There is no part of the hardware trade that is more difficult to keep in touch with than the specialties. So many meritorious goods are introduced to the market each year by the more aggressive manufacturing houses that the retailer finds it no easy matter to be in touch with all the new lines. By securing the catalogues of the best houses as they are announced is probably the surest way to keep abreast the times. One of the latest catalogues issued is that of the Erie-Specialty Co., Erie, Pa., U. S. A. This firm makes cork pullers and screws in great variety, ice picks, lemon squeezers, chill shakers, ice shaves, picks and shredders, potato mashers, ice cream dishes, soda spoons, etc. Readers writing for this catalogue are requested to mention Hardware and Metal.

THE HOUSE OF THE HONEYMOON.

H. B. Wiggin's Sons Co., Bloomfield, N. J., are publishing one of the most unique novels ever received by Hardware and Metal, under the above title. It is a love story told under a cover of burlap and replete with interesting developments and valuable suggestions. Hardware dealers writing for this are requested to mention this paper.

THE LIGHTING OF NEW YORK.

The Canadian General Electric Co. issue two booklets which are standard works of reference on the subject of illuminating. One of these is entitled "The Lighting of New York City," and is replete with illustrations of famous scenes in New York. The widespread use of "General Electric" lamps of various kinds is demonstrated by these photographs in a striking manner. The book is in every sense an artistic publication and cannot fail to be of interest to all who see one. The other booklet is entitled "Light and Illuminating Engineering." This is a treatise by W. D. A. Ryan, dealing in a scientific manner with the comparative effects and value of the various lighting systems of the day. Hardware men who are interested in electrical supplies would do well to secure these works and to study them carefully.

A DAINTY MEMO BOOK.

The James Robertson Co., dealers in plumbers' supplies, white lead, varnishes, putty, lead pipe, solder, babbit metal and glues, Toronto, have prepared a dainty memo. book with celluloid covers, many pages of valuable hints and some hundreds of pages for notes. These books were prepared for customers and prospective customers, so any of the trade interested in the lines noted above can secure one of them on application.

TRAP SHOOTING RULES.

A booklet which should be appreciated by sportsmen has been issued by The Union Metallic Cartridge Co., New York. It is a vest pocket edition of "Trap Shooting Rules and Records" of the Interstate Association. As the work is authoritative it should be great service to all interested in trap shooting. Hardware dealers should have it in their library as a work of reference. Any of the trade can secure copies of it by mentioning Hardware and Metal in their request to Department "2," Union Metallic Cartridge Co., 313 Broadway, New York.

THE METALLIC ROOFING CO.

Hardware men in all sections of Canada have learned to recognize in metallic coverings for both interiors and exteriors a line which offers them a profit where the old order of wood or shingles offered them nothing. Consequently many dealers carry this line and at this season are on the alert to secure contracts which will call for a supply of metallic goods. To be most successful in this it is best to have at hand all

WIRE NAILS
TACKS
WIRE

Prompt Shipments

The ONTARIO TACK CO.
Limited
HAMILTON ONT.

literature available, especially such literature as contains illustrations showing new designs and new combinations. To meet this condition the Metallic Roofing Co., Toronto, have issued a valuable booklet, "Interior Decoration in Metal;" a folder describing "Richardson's Pressed Metal Fire-Proof Doors," and several leaflets giving the newest designs in steel ceilings, wall designs, etc. All of this literature can be had by readers of Hardware and Metal who are interested in Metallic goods. Write for them in good time to make plans for Spring contracts.

THE UNITED FACTORIES.

The hardware trade have found brushes, brooms and woodenware to be a staple line which they can handle to such excellent advantage that they must keep well informed regarding the line. For this reason the announcement that the United Factories, Toronto, have issued their new catalogue is of importance to all retailers. All who have not secured it are invited to do so at once.

THE DODGE MFG. CO.

"Power Transmission Economics," for February, the monthly organ of the Dodge Mfg. Co., Toronto and Montreal, is to hand. Among the articles in this number are "Modern Tendencies," "A Recent Rope Drive Installation," and "Shafting and Hanger Installation." This paper will be sent to any readers of this paper who are interested in power transmission supplies.

SEEK CANADIAN AGENTS.

The Blackman Export Co., London, Eng., manufacturers of table, desk and bracket fans and guards of polished brass, with speed regulating switches attached, are in a position to appoint Canadian agents for their lines. James Keith & Blackman Co., manufactdrers of "Keith's" new light, a patent automatic compressor, lanterns, electric lamps, etc., are associated with this company. As these firms have a reputation which extends to almost every civilized country in the world, their agency would probably be well worth securing. The firm have ready extensive descriptive literature, which will be sent to anyone interested.

ANNUAL PRICE LIST READY.

The Becker Glass & Paint Co., Buffalo, offer for the perusal of the trade their annual price list on brushes, also copious literature relating to their plate glass, paints, oils, varnishes, and window glass.

"ARK BRAND" PAINTS.

The Francis-Frost Co., Toronto, are making use of an attractive folder illustrating the various colors of their "Ark Brand" weather and waterproof prepared paints, manufactured by them. This firm also make the "Ark Brand" wood filler and surfacer.

NEW DESIGNS READY.

C. McArthur & Co., Montreal, have issued an illustrated price-list of the newest designs in their "Anagtypta" friezes, ceilings, dados, diapers, borders, fillings, etc.

NATURAL WOOD FINISH.

Berry Bros., Walkerville, Ont., and Detroit, publish an exceptionally valuable book entitled "Natural Woods and how to Finish Them." This should be of great service to the trade in selling wood finishes, etc., and should be in the library of every hardware retailer who sells paints. It will be sent free to readers of this paper.

FIRE FIGHTING SUPPLIES.

The Gutta Percha & Rubber Mfg. Co., Toronto, are manufacturers of fire hose and fire department supplies. Their catalogue will be sent free to all readers of this paper who are interested.

ELECTRICAL FIXTURES.

Munderloh & Co., Montreal, have issued a catalogue of their electrical fixtures and supplies which should command the attention of every hardware man who handles these goods or has any intention of doing so. It appears to be one of the most complete, attractive and acceptable of those issued within the last two or three years, but at the same time it is what might have been expected from this firm. The catalogue shows a great variety of electrical fixtures which it should be to the advantage of most hardware men to handle. The catalogue is an expensive one, and is well bound. Munderloh & Co. will be pleased to send copies to hardware men who are intending to handle these lines. Our readers should write for one.

A Profitable Paint Specialty.

The Sherwin-Williams Varnish Stain is a good selling paint specialty. It pays a good profit and helps sell the other lines.

It is made to please the householder; and is constantly needed about the house to stain woodwork, cupboards, shelves, furniture, etc.

It sells at a moderate price.

The Sherwin-Williams Varnish Stain is a varnish and stain combined, imitating natural wood and drying quickly with a bright gloss. It is easily applied, ready for the brush, and is not tiring to put on.

Put up in convenient sized cans to imitate seven popular woods.

Spring house cleaning makes a big demand for Varnish Stain.

Prepare for it by writing for information and price list today.

Business Changes

ONTARIO.

LAPUM & O'CONNOR, general merchants, Centreville, have dissolved parnership. They have been succeeded in business by O'Connor & McGill.

H. Hasenpflug, blacksmith and wagon maker, Milverton, is dead.

J. Diemert, harness maker, Formosa, has assigned to J. B. Goetz.

Watt Bros., machinists, Gananoque, have advertised that they are giving up business.

H. Burden, of the E. Harris Co., manufacturer of paints, oils, etc., Toronto, is dead.

Buchanan & Penston, lately dealers in hardware, stoves and tinware, Barrie, have assigned to J. R. Hambly.

W. H. Morrison, hardware and furniture merchant, etc., Shedden, has advertised his blacksmith business for sale.

Ritchie & Campbell, general merchants, Wingham, have dissolved partnership. H. Ritchie continues in business.

W. F. Cockshutt & Co., grocers and hardware merchants, Brantford, have sold their hardware business to A. Ballantyne.

J. V. Poaps & Co., general merchants, etc., Ottawa and Oznabruck Centre, have disposed of their Oznabruck business to Gemmell & Burton.

QUEBEC.

A. A. Valois, tinsmith, Berthier, is dead.

A. Lachance, tinsmith, Stanfold, has sold out.

The Domnion Linseed Oil Co., Montreal, have registered.

Chevalier & Roy, contractors, St. Louis, have registered.

Deguise & Lemay, contractors, Montreal, have registered.

Pogeau & Patenaude, contractors, Montreal, have registered.

Cadieux & Giroux, plumbers, etc., Montreal, have dissolved partnership.

The Hall Engineering Works, ship builders, etc., Montreal, have registered.

Dr. A. T. Sanden manufacturer of electric appliances, Montreal, has registered.

The assets of P. P. Gizuere, plumber, Quebec, have been advertised for sale March 4.

The Alza English Sash and Lock Hardware Co., Montreal, have dissolved partnership.

Cleroux & Poirier, manufacturers of paints, varnishes and oils, Verdun, have registered.

The parnership of the Alza English Sash Window Co., Montreal, has been registered.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 3, 1904.

GENERAL machinery conditions this week are much the same as at the time of our last report. The freight blockade has been worse than ever this week and of course deliveries have been out of the question. The general tie-up of the railways has hindered travellers from reaching prospective customers. Nevertheless there is a general feeling that the worst is almost over and that a big improvement in business may soon be expected. In spite of adverse weather conditions there has in fact been some improvement this week. Orders are reported and are attracting attention which in a busier season would not be considered worthy of special note.

The one line of machinery which has been in the steadiest demand throughout the quiet Winter season is engines and boilers. There have been no very remarkable orders this week but a number of sales of small and medium engines and boilers have been made. A number of small horse-power Corliss engines have been sold this week.

Saw mill outfits and saw mill supplies continue to attract the attention of local machinery men. A complete saw mill outfit was sold this week by a local machinery agent to a customer in the Lake St. John district.

In machine tools there has been some increased activity. The C.P.R. have been on the market for some time for a supply of machine tools for various shops. The Fairbanks Company have sold them a $35,000 lot of machine tools for their Winnipeg shops.

Rumors have been current all week that the Locomotive and Machine Company's works at Longue Pointe are to be taken over by the American Locomotive Company. Agents of the latter company have been appraising the works and negotiations are now in progress for the sale of this extensive plant.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, March 4, 1904.

ON account of the stormy weather and the blocked condition of the roads for the greater part of the week there has been no important events in the machinery market this week. Things are still quiet, and no changes of moment are to be reported over the report of last week. In spite of dull times at the present time dealers are still very optimistic since they are of the opinion that the dullness of the present time is due almost entirely to circumstances. For the most part they think that as soon as the weather breaks up things will brighten up considerably and that many orders will be placed. One dealer expressed the opinion that there will be a regular rush of business as soon as the weather becomes open enough to warrant the keeping open of the railroads. He bases his statement on general trade predictions and on the character and number of enquiries received during the last month or so. During the early part of the week there was very little done on the machinery market, even enquiries not coming in as they usually do, the blocked mails, of course, accounts for this.

From the enquiries received and from the small amount of business done it seems that engines and boilers still maintain their position on the market, although, considering only actual sales it is probable that they fell behind last week's sales.

The demand for machine tools and iron-working machinery continues steady as reported last week.

Wood-working machinery shows no change this week, the demand being fair.

Manufacturers of electrical machinery have a good supply of work on hand, but of course shipments have been delayed by the weather conditions, and enquiries have not been sonumerous. However, this division of the market seems to be enjoying the greatest activity at the present time.

New York.

The Iron Age says of the New York market:

As there were no deals of any magnitude closed to give it an impetus business for the past week was just about what could be expected when the actual working days were cut down fully a third. As to general conditions, those of the past few weeks still prevail, there being no change of importance, and the orders and enquiries that have come in have been for small amounts, with one exception, though the volume has been fair. A noticeable feature of late has been the hesitancy on the part of even small buyers to close without more or less correspondence, and orders seem to be getting harder and harder to clinch. Another matter which has lately come into more than usual prominence in the machine tool trade is the dealing in second-hand machinery. While there has always been more or less exchange of these tools with a bonus for new tools, it is said that at the present time there is a great deal of this being done. There is no doubt but that extensive dealings of this kind have an unsettling effect on the market for new tools.

Machinery Hockey.

On Saturday, February 27th, hockey teams representing the Fairbanks Company and Williams & Wilson met at the Victoria Rink, Montreal. The former team were the winners by a score of 6 to 0. The line up was as follows:

The Fairbanks Company—A. W. Bremner, goal; W. E. McLean, point; J. Hurst, cover-point; M. Davidson, rover; C. W. Beaufoy, centre; T. Mulcair, right wing; D. Nicholson, left wing.

Williams & Wilson—F. J. McGoldrich, goal; W. G. Young, point; W. F. Walsh, cover point; W. Mahoney, rover; W. B. Broustetter, centre; H. Thomas, right wing; A. McKay, left wing.

Referee—Geo. Cummings.

STEAM BOILER AND ENGINE INSPECTION.

AN act has been passed by the Legislature of Ontario regulating where and how steam threshing engines shall be used and providing for the appointment of inspectors to examine all steam boilers and engines in use throughout the province, both before and during use, at least once each year.

In respect to the steam threshing engines it is enacted that every manufacturer of such engines shall provide each engine with an efficient spark arrester before disposing of it, on penalty of default of a fine of from $5 to $20, and that no threshing engine shall be operated by the owner at a distance of less than 25 feet from any barn or other building, upon penalty of default to the same amount.

With respect to steam boilers and steam engines one or more inspectors shall be appointed by the Government whose duties will be as far as possible, to inspect all steam boilers and engines in Ontario before they are used; to test by hydrostatic pressure all boilers in use in Ontario, satisfying themselves whether they are well made of suitable material; to see that the opening for the passage of water and steam respectively and all pipes and tubes exposed to heat are of proper dimensions and free from obstructions; to see that the friction (fire line) of the furnace is at least two inches below the minimum water line of the boilers; to see that the flues are circular in form; to see that the arrangements for the delivering of feed water to the boiler are adequate; to see that the safety valves are of suitable dimensions, sufficient in number and properly arranged, and that the valve weights and springs are properly adjusted so as to allow the certified amount of pressure in the boilers; to see that there is a sufficient number of guage cocks and a properly inserted fusible plug in the flue or crown sheet so as to fuse by the heat of the furnace whenever the water in the boiler falls below its prescribed limit; to see that there are adequate provisions for an ample supply of water to feed the boilers at all times, so that in high pressure boilers the water shall not be less than four inches above the crown or flue sheet in upright boilers; and that the means for blowing out are provided so that the sediment may be removed while under steam pressure.

The standard for high pressure boilers under the hydrostatic tests is to be 125 pounds to the square inch as a maximum pressure allowable as a working pressure for a new boiler of 42 inches in diameter, made in the best manner of plates of 1-4 inches in thickness of good materials. Others shall be rated according to this standard. No boiler, steam pipe, nor steam engine shall be approved which is made in whole or in part of bad material, or that is unsafe from any cause. Any one constructing and delivering a boiler, knowing it to be imperfect in its flues, flanges, riveting, bracing or in any other part, shall be liable to a fine of $200.

Each inspector shall be authorized to charge a fee of $5 for the inspection of each boiler and its steam connections including the engine. Owners or users of steam boilers and engines must allow the inspector free access to their boilers and engines, and must furnish water and fill the boiler, and must remove the jacket or covering when directed by the inspector to enable him to make a test. Any person operating a boiler or engine concerning which the inspector has refused to grant a certificate, shall be liable to a penalty of $5 per day for each day of operation.

This act does not apply to railroad locomotives, nor to boilers and engines subject to the legislature of the Dominion Parliament.

Their Mill Now Ready.

THE Canada Corundom Company, Toronto, have issued a circular with the following announcement:

"Our new mill will be completed by February 15th, 1904, and from that time on we shall be able to supply the wants of all our customers. Three years ago our product, Craig mine corundum, was first put upon the market. The demand for this product has steadily increased, and last Spring we began the erection of our new plant. It is the largest abrasive mill ever erected in any country. Its capacity is from 5,000 to 8,000 tons per year of finished product. This product is absolutely uniform and we can duplicate your orders indefinitely.

"If, in the past, you have been using the impure form of corundum called emery for grinding and polishing, write us stating what quantities of abrasive you require per year and what the sizes are. We are now open to make contracts to furnish you with from one to three years' supply of pure Craig mine corundum."

MONTREAL STEEL WORKS MEET.

IT is now a year since the Montreal Steel Works took over the property and plant of the Canada Switch and Spring Company. The first annual meeting of the shareholders was held on Wednesday, March 2nd. The general manager's report submitted to the meeting made the following statement of the company's financial standing at the end of the past year:

"For the first nine months the business was quite satisfactory, and the demand for our goods was fully up to expectations; but during the last three months the general conditions of the steel trade changed, and the demand fell off. Notwithstanding this, the statement of the year's business shows the satisfactory result of a net profit of $105,584.86.

"Dividends at the rate of 7 per cent. on the preferred, and 5 per cent. on the ordinary stock for the past year have been paid; also interest on preferred stock and bonds of the Canada Switch and Spring Company, Limited from January 1st, 1903, to date of floatation of the new company, May 21st, 1903, amount in all to $55,648.86.

"The maintenance are repairs of plant and buildings has been charged to revenue, and an amount of $12,000 has been placed to the credit of a reserve account to make additional provision for depreciation of buildings, plant, etc., leaving the sum of $37,936.00 to be carried forward as balance at the credit of profit and loss account.

"The additions to our land, buildings and plant, for which the additional capital was provided, were carried out and were barely completed at the close of 1903. They were, therefore, not a factor in the earnings of the year.

"The dividend on the preferred stock will be paid at the regular rate, as usual, but it may be considered prudent until trade improves, to postpone action on the dividend on the ordinary shares."

MACHINERY AND ELECTRICAL NOTES

THE Canadian Engineering Co., composed for the most part of the shareholders of the Canadian Bullock Electric Manufacturing Co., has purchased the entire plant and buildings of the James Cooper Mfg. Co., Rockfield, Que. This plant is considered to have been the finest and most complete for the manufacture of mining machinery in Canada. The Canadian Engineering Co. will manufacture machinery for the Canadian Bullock Electric Mfg. Co. and for the Lidgewood Hoist and Cable Co.

F. A. Folger, manager of the Kingston Light, Heat and Power Co., Kingston, Ont., is dead.

The City Council of Sherbrooke, Que., has purchased the plant of the Sherbrook Light, Heat and Power Co., for $233,000.

The Fairbanks Company have sold a $35,000 lot of machine tools to the C. P.R. for installation in their new Winnipeg shops.

A branch of the Grand Forks Foundry and Machine Shops, Grand Forks, U.S.A., has been established in Winnipeg by Mr. Daniel Dow.

The Winnipeg Electric Co., Winnipeg, have dissolved partnership, and the business will hereafter be carried on by L. E. Dye under the same style.

The Sydney and Glace Bay Electric Co., Sydney, N.S., are involved in a law suit with the Cape Breton Electric Co. The trouble has been brewing some time.

The Mount Baker-Yale Mining Co., of British Columbia, have just installed a ten-stamp mill near Yale, and will shortly add another battery of ten stamps.

The Kingston Locomotive Works have issued the statement that they have orders for 25 locomotives from the Intercolonial Railway and 10 from the Canadian Pacific Railway.

The blacksmith shops and the oil house of the Canadian Pacific Railway at Regina have been destroyed by fire. The roundhouse had a narrow escape from the flames.

The hospital board of Vancouver is considering whether to erect a building at a cost of $185,000 or one costing $125,000 as originally designed. The foundations are now unsuitable for either.

J. J. Nickson & Co., a well known contracting firm of Vancouver, have been awarded a million dollar contract by the Canadian Pacific Railway for the construction of an irrigation canal near Calgary.

The Minnedosa Electric Light & Power Company have about completed their new power house, and are installing the machinery, when it is expected that the present satisfactory service will be considerably extended.

The Galt Reporter says that the Grand Valley Railway will be built to Galt this Summer, and that the power house and car repair shops will be established in that town. The cars for this railway are now being made by the Ottawa Car Co.

The Canadian Pacific Telegraph Co. have decided to have an additional wire strung from Peterboro' to Toronto, and one from Toronto to Windsor. The placing of another wire between Montreal and Winnipeg and another between Winnipeg and Regina is also contemplated.

Kuhlow's German Trade Review and Exporter says that apparently favorable results have been obtained by the introduction of electric power in the home weaving industry at Ourath, Germany, where formerly hand weaving was carried on extensively, though not very profitably.

The Electrical Development Co. has decided to use steel towers instead of wooden poles for the conveyance of electrical power from Niagara Falls to Toronto. These towers will be probably eight or ten feet square at the base and from 40 to 50 feet high; they will be 400 feet apart. These towers have been used in Mexico, but not as yet in Canada nor the United States. There will be four transmission lines with a capacity of 10,000 horse-power each, making a total of 40,000 horse-power.

The Scientific American says that a brake shoe is being constructed by an American firm having a hard iron insert around which is cast the body of the shoe in gray iron. The gray iron is not permitted to chill, which is claimed to be a peculiarity of this shoe as compared to others of the kind. The hard iron is made of very high grade malleable iron. The secret process of casting gray iron about the insert without chilling are said to give toughness to the body of the shoe, and a better friction coefficient than a chilled shoe.

Some interesting experiments with a new steel process have been in progress at Pontymister Works near Newport, England. The investigation has resulted in the discovery that by the use of a secret alloy steel suitable for making tools can be produced from Silmens steel, instead of only from crucible steel. The result is that considerable saving is effected in the cost of manufacture. Should the experiment be successful, it is anticipated that a new industry will be created, and the whole system of steel manufacture revolutionized.

THE BICYCLE PROBLEM.

HAVE you ever asked yourself this question, "Is the bicycle a plaything or something absolutely useful." Your answer would be easily guessed. It is because of the usefulness of the bicycle that the public has turned seriously towards it with the glamour of the faddish days out of its eyes. Indeed it can be safely said that were it not for the fact that wheeling became such a dizzy craze the bicycle would have occupied some time ago, the steady position which a year's more patronage will give it.

The bicycles for 1904 bid fair to make history for wheeling—the improvements introduced, the perfecting of the cushion frame and coaster brake leave nothing to be desired. There is no class of merchants so closely interested in the welfare of bicycling as the hardware dealers. They can help develop interest in bicycling by having a new and good stock of 1904 cushion frame wheels in their show rooms.

CANADA HARDWARE CO. MEET.

The annual meeting of the shareholders of the Canada Hardware Company was held at the company's offices in Montreal, on Tuesday, March 1st. The report of the year's business submitted by General Manager A. M. St. Arnaud was considered quite satisfactory, and was unanimously adopted. The directors elected were as follows: H. Beauchemin Sorel, P. Q., Gaspard De Serres, J. L. Roy, A. M. St. Arnaud, P. Delisle, J. Beauchemin, E. Bureau.

Immediately after the general meeting of the shareholders, a meeting of the directors was held, and the following officials were elected: President, Gaspard De Serres; vice-president, H. Beauchemin; general manager, A. M. St. Arnaud; secretary-treasurer, P. Delisle.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

CRYSTAL REGISTERED TRADE MARK CORUNDUM

WHAT THE UNITED STATES GOVERNMENT SAYS:

"Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of emery in the corundum that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."—*Bulletin No. 180, Department of Interior.*

Emery is about 35% Corundum. Craig Mine Corundum is 98% Corundum.

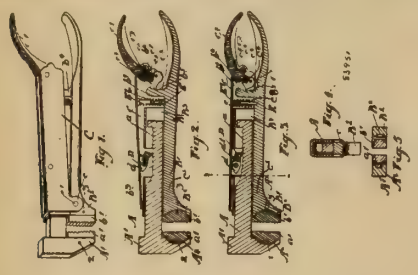
Patents Granted in Canada.

An authoritative report of patents granted by the Canadian Patent Office for recipes and devises of interest to HARDWARE AND METAL readers.

A Wrench.

GRANTED Charles L. Henderson, Berlin, Ont. Claims: 1. In a wrench, the combination with the stationary jaw and bar and the movable jaw and bar provided with a recess at the back provided with rachet teeth, of the straddle bar provided with hatchet teeth, of the straddle bar provided with a spring actuated dog co-acting with the ratchet teeth on the back of the movable jaw bar, spring means for holding the straddle bar from the stationary jaw bar, a projection attached to or forming part of the lower jaw bar, a handle pivoted in the end of the straddle bar, and means for engaging the inner end of the handle with a projection, so as to take up the strain on the end of the straddle bar, as and for the purpose specified.

2. In a wrench, the combination with the stationary jaw and bar and the movable jaw and bar provided with a recess at the back provided with ratchet

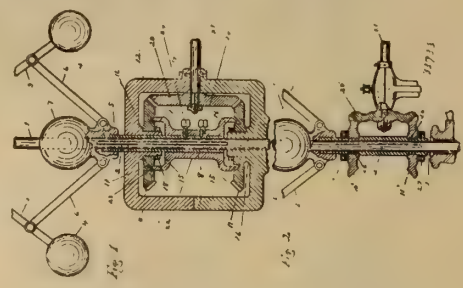


teeth, of the straddle bar provided with a spring actuated dog co-acting with the ratchet teeth on the back of the movable jaw bar, spring means for holding the straddle bar from the stationary jaw bar, a projection provided with ratchet teeth at the rear end thereof, a handle pivoted in the end of the straddle bar, a spring designed to normally hold the handle upwardly, a dog pivoted in jaws on the end of the handle, and spring held therein and designed to coact with the ratchet on the projection extending inwardly from the stationary jaw bar, as and for the purpose specified.

This wrench has also been patented in the principal countries of the world. A company is to be formed, with headquarters in Boston, for the manufacture of the wrench in the United States. A company will also be formed in Canada to make it.

Ball Valve.

Granted Lyon Cohen, Montreal, Quebec, Canada. Claim: 1. In a valve of the class described, in combination, a body having a bore and an opening leading therefrom, a plug chamber substantially at right angles to said bore and with which said opening communicates, a plug, and automatic means for con-



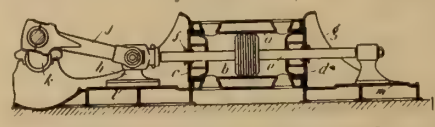
trolling said plug, said body having an outlet opening communicating with said plug chamber adjacent to said first opening.

2. In a valve of the class described, in combination, a body having a bore with an opening leading therefrom, a plug chamber below said opening, the axis whereof is substantially at right angles to said bore, a plug mounted thereon, and a float arm adapted to maintain said plug upon said opening, said body having an outlet opening communicating with said plug chamber above said plug.

3. In a valve of the class described, in combination, a body having a substantially horizontal bore and an opening passing downwardly therefrom, said body having a flange and a threaded nipple therebeyond, a plug chamber beneath said opening, a plug mounted therein, a ball arm pivoted to said body and resting against the under side of said plug, said body having an outlet opening communicating with said plug chamber above said plug, and lying between said chamber and flange.

Gas Engine.

Granted Hans Richter, Nuremberg, Bavaria, Germany. Claim: In double acting four stroke gas engine, a base, a cylinder mounted thereon, a removable cylinder head at each end, a piston rod projecting through each cylinder head, a piston carried by said rod, and a cross



head connected to the rod at each end and having a sliding connection with the base below the bottom of the cylinder, substantially as described.

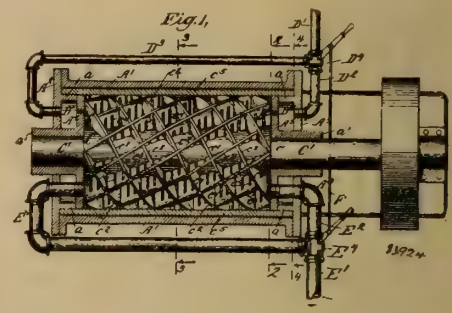
Rotary Engines.

Granted Thomas P. Butler, Wantagh, N. Y. Claims: 1. The combination with an internally circular casing, of a rotary piston comprising a body or shaft, rib coils extending spirally around said body or shaft, and abutments extending across the space between adjacent rib coils and outwardly from said body or shaft, said abutments being constructed to provide openings.

2. The combination with an internally circular casing, of a rotary piston comprising a body or shaft, rib coils extending spirally around said body shaft, and abutments extending across the space between rib coils and outwardly from said body or shaft, said abutments being provided with openings extending outwardly from the body or shaft.

3. The combination with an internally circular casing, of a rotary piston comprising a body or shaft, rib coils extending spirally around said body or shaft, and abutments extending across the space between adjacent rib coils and outwardly from said body or shaft, said abutments being provided with openings having oblique sides.

4. The combination with an internally circular casing, of a rotary piston com-



prising a body or shaft, rib coils extending spirally around said body or shaft, and other rib coils extending in the reverse direction around said body or shaft, openings being provided through one of the sets of rib coils.

5. The combination with an internally circular casing, of a rotary piston comprising a body or shaft, rib coils extending spirally around said body or shaft, abutments extending across the space between adjacent ribs and outwardly from said body or shaft and constructed to provide openings, and an outer shell, all said parts being connected together to be rotated in unison.

6. The combination with an internally circular casing, two main heads and two secondary heads for said casing, constructed to form induction and eduction chambers for the motive agent, of a rotary piston comprising a body or shaft, rib coils extending spirally around said body or shaft, and abutments extending across the space between adjac-

ent rib coils and outwardly from said body or shaft and constructed to provide openings.

7. The combination with an interrally circular casing, two main heads and two secondary heads provided with oblique openings for said casings, and constructed with said main heads and casing to form induction and eduction chambers for the motive agent, of a rotary piston comprising a body or shaft, rib coils extending spirally around said body or shaft, and abutments extending across the space between adjacent rib coils and outwardly from said body or shaft and constructed to provide openings.

U. S. FOREIGN TRADE IN 1903.

THE American Metal Market, New York, publishes the following statistics of the foreign trade of the United States, compiled from the report of the Department of Commerce an Labor: "More than one-half of the exports from the United States in 1903 went to British territory, and practically one-third of the imports into the United States came from British territory. Our total exports to British territory in the calendar year 1903 were $768,000,000, or 52 per cent. of our total exports, and our total imports from British territory were $308,000,000, or 31 per cent. of the total, speaking in round terms. These facts are shown by an analysis of the year's commerce, made by the Department of Commerce and Labor through the Bureau of Statistics. By British territory is meant the United Kingdom and its colonies, dependencies and protectorates.

"The territory included under this designation of the United Kingdom and its colonies, dependencies and protectorates contains over eleven million square miles, or more than one-fifth of the land surface of the globe, and has a population of 400,000,000, or one-fourth of the population of the world. The largest exportation to British territory course, was to the United Kingdom, $543,000,000, and this was the largest exportation to any single country. Next in order of magnitude of exports to British territory was Canada, $131,000,000; British Australasia, $32,000,000; British Africa, $28,000,000; British West Indies, $10,000,000; Hongkong, nearly $10,000,000; India, nearly $5,000,000, and the remainder scattered through the smaller British dependencies.

"Of the $308,000,000 worth of imports into the United States from British territory, $177,000,000, speaking in round terms, came from the United Kingdom, $53,000,000 from Canada; $48,000,000 from India, $12,000,000 from British West Indies, $7,000,000 from Australasia, $1,000,000 worth from British Africa and the remainder from numerous British dependencies of less importance.

Thus, of the foreign commerce of the United States aggregating nearly two and one-half billion dollars in the calendar year 1903, more than one billion dollars represented commerce with British territory.

Next comes Germany, to which our exports in 1903 were $225,000,000 and from which our imports were $122,000,000. With German territory, outside of Germany, our commerce is small.

Our commerce with Germany has grown much more rapidly in the last decade than that with the United Kingdom. In 1893 our exports to Germany were only $88,000,000, in 1903 they were $225,000,000, an increase of over 150 per cent., while in the case of the United Kingdom our exports to that country in 1893 were $415,000,000, and in 1903, $543,000,000, an increase of only 30 per cent. Imports into the United States from Germany increased during the decade from $89,000,000 in 1893 to $122,000,000 in 1903, or 37 per cent., while from the United Kingdom the imports increased from $150,000,000 in 1893 to $176,000,000 in 1903, or 17 per cent.

Canada stands third and our total exports to Canada in 1893 were $57,000,000, and in 1903 $131,000,000, an increase of about 130 per cent.; while our imports from France were 80 million 000,000 in 1893 to $53,000,000 in 1903; an increase of 56 per cent.

France is fourth, our exports to that country in 1903 being $88,006,000, against $57,000,000 in 1893, while our imparts from France were 80 million dollars worth in 1903, against 64 millions in 1893.

A THREE-IN-ONE LUBRICANT.

This utilitarian age will undoubtedly welcome the suggestion of a universal panacea for the ills of the housekeeper, sportsman, mechanic or artisan. Woodwork becomes marred, tools rust and get dull, and sewing-machines need occasional lubricating if they are not to clog up. Men needs must tinker up the old until it simulates the new, what better means is conceivable of refurbishing, or renewing the lost virtue of a thousand and one accessories than "Three-in-one" lubricating, cleaning and polishing oil, manufactured by G. W. Cole & Company, New York.

Further information will be supplied to readers of HARDWARE AND METAL on request.

THE SUCCESSFUL TRAVELLER.

By Herbert C. Ridout.

THE ideal traveller is not always the man who, the very first trip, brings back a bag full of orders. They may bear testimony to his good talking abilities, and in value represent his wages for the next two or three years, but they are not much good if in the course of a few months he cannot go back and ask for repeat orders. The firm may have given him that first order simply to get rid of him, because he had talked or persuaded them into it, or they may have been busy just at the moment that he called, and gave the order rather than be subjected to persistent interruptions. Or it is not improbable that the traveller has, in his zeal, "put up the back" of some minor member of the firm he is "nursing" and that this individual has put a word in against him.

It behoves a traveller to be as wary as a cat. A chance word here, or even a joke there, has lost many a repeat order.

The ideal traveller is the man who has a standing connection, with which houses he is as welcome as the day, and where he may invariably look for orders to come his way.

The traveller who knows his business does not always lift an order at the first visit. He wants to have a ground well cultivated and which will bear more than one crop of fruit. To take an order on the first visit savors to him too much of grabbing, and he cannot afford to leave such impressions behind him.

He strives to create a good impression that will serve as a standing introduction for him, that will not cause the customer to refuse to see him next time he comes in, but will rather make him inclined toward seeing him. Creating a good impression at the first time of calling is the most important point to the traveller who wants to make a good thing of it, and who is striving to live by it. He does not always talk "shop," indeed the probabilities are that he has a hobby in common with the man he is talking to. And if we could but follow him into one or two of the houses, we should most likely find that whilst in the first he is an ardent piscator, in the second he is devoted to golf, and in the third a philatelist gone mad.

Of course he has discovered that these are the weak points of his prospective customers, and he is playing upon them. But he plays upon them lovingly, as an organist handles the stops of an organ, and just as effectively too. He does not make the mistake of showing the customer how much he himself knows about the sport or game, or whatever it is. No, he makes a good listener, just dropping a word here and there to keep the subject alive. But if the other's interest flags the traveller who knows his business is on his feet in a moment, and ready to bid his customer good-day.

The ideal traveller can sum up the character of the man he is dealing with in a trice. He grasps by intuition whether the man is a possible customer or whether he is not. He is a man of many moods, and he can suit himself to the temperament of the man he is conversing with.

He is not ashamed of his business as so many travellers give one the impression of being. The consequence is that he goes about his work in an enthusiastic way which carries most things before it. His enthusiasm carries him through where less perceptive men would stick fast, and he usually imparts a little of his enthusiasm to all with whom he comes into contact. He looks for success, and it comes to meet him half-way.

The ideal traveller looks every word he speaks; his face as often as not carries the conviction of his word, and people like dealing with him because he looks honest.

He is familiar with his goods from first to last, and can explain away a seeming fault so that even a practised workman is obliged to admit its possibility. Usually he has graduated from the lower rungs of the business ladder, a fact which accounts for many of his characteristics as a traveller. The courtesy one meets with at his hands stamps him as one of nature's noblemen. The knowledge he radiates when talking of the goods he is handling, indicates in itself that he has had a practical inside experience of them.

He is in all things the bearing of a gentleman, and the enthusiasm he possesses and the knowledge he displays more than compensate for any deficiency in flow of rhetoric. As a matter of fact this lack is often a blessing in disguise, for it is sometimes the best speakers among the gentlemen on the road who prove such bores to those they call upon. This does not hold good in every case, however, it must be admitted.

His personality is magnetic, and he is attractive in his manner. He has learnt that there must be as much merit in the man himself as in the goods he stands for, if he is to keep a permanent following and his position. As a natural sequence, his coming is, if not actually eagerly anticipated always welcomed, and he is probably even shaken by the hand whilst other travellers are obliged to content themselves with a wave of the hand as the principal motions them to a seat, or even handed over to a subordinate.

The really successful traveller makes friends wherever he goes, and he is able to claim that measure of success which comes as a reward to keen insight, sagacity, applied wits, resolution, courtesy and unceasing rectitude of behaviour in business matters as well as outwardly. Such men make heads of firms.—Grocery.

PERSONAL MENTION.

Mr. W. C. Gurney, of the Gurney Foundry Company, Toronto, has gone on a business trip to Manitoba and the West.

Mr. R. B. Baker, formerly with the F. Hamilton Hardware Company., Hamilton, was in Toronto on business this week.

The F. Hamilton Hardware Company, Hamilton, have bought the stock and premises of F. C. Carpenter, wholesale dealer in hardware and plumbing supplies, Hamilton.

W. F. Cockshutt & Co., hardware dealers, Brantford, Ont., have sold their stock of hardware, paints, oils and glass to A. Ballantyne for between $15,000 and $20,000. This firm have been established for over 75 years, and the removal of the firm from the commercial life of Brantford marks an epoch in the history of the city.

Mr. A. W. Arnott, of Geo. Ridout & Co., Toronto, was a recent caller at our London offices. Mr. Arnott is in the Old Country getting in close personal touch with the houses his firm represents, and is visiting the trade centres of Great Britain and the continent. News of new agencies of interest to the trade will be announced on his return.

Mr. Edwin Chown, formerly with Lewis Bros. & Co., Montreal, started to travel for the Seybold & Sons Co. last week, at Brockville, and ended the week at his former home, Kingston.

Mr. Joseph R. Henderson, Halifax, president of Henderson & Potts Co., Limited, Montreal and Halifax, paid a long business trip to Montreal last week.

Mr. Henry G. Allen, of the Oneida Community, Niagara Falls, Ontario, was a caller at the Montreal office of Hardware and Metal last week. He expressed himself as highly satisfied with business prospects in Canada. Mr Allen is taking an extended trip through the West, visiting Winnipeg, Vancouver, San Francisco, and returning by Salt Lake City.

UNIVERSITY OF TORONTO'S NEEDS.

A SHORT time ago there appeared in these columns the summary of an admirable address on the field and needs of Ontario's Provincial University delivered by Mr. W. T. White, B.A., manager of the National Trust Co., before the Canadian Club of Toronto.

Among the needs Mr. White mentioned as retarding the advancement and crippling the usefulness of the university was that of a physical laboratory, an indispensible part of the equipment of an up-to-date university in these days of scientific discovery and progress.

It is understood that the Alumni Association of the University of Toronto are arranging for a delegation of graduates, undergraduates and friends of the university, to wait upon the Premier and the Minister of Education at an early date to represent to them the importance of taking immediate steps to provide adequate laboratories for the physical department of the Provincial University. Another object of the Alumni Association is to secure from the Government a definite pronouncement of its policy as to the university. A commission to investigate the whole university question and the adoption of a forward policy that will allow the institution to expand naturally would also be welcomed.

It is to be hoped that the Government will meet the university people in no picayune spirit. The university represents a very large capital expenditure and its full usefulness should not be suffered to be impared for the lack of adequate equipment through any petty parish view of economy.

Criticisms have been made at various times of some features of the university, some with good reason. The suggestion of a commission should be seized upon by the Government, the whole university question thoroughly examined, the Provincial University raised to the highest degree of excellence in all her departments.

A curious feature, considering the disultoriness of the Government, is that scarcely a member of the Legislature can be found who does not approve of a vigorous university policy.

ATTENTION TO CHILDREN.

A TORONTO retailer who has won a large measure of success ascribes the close grip he has on his wide constituency to the attention he has paid to the children and the youth of the neighborhood about his store.

He has made a hobby of learning the names of all children who enter his store, of always greeting them with a pleasant smile and a kind word. As they grow up he keeps in touch with them as well as possible, even if they seldom enter his store. Should one of them marry he manifests his interest in the event in some way or other.

He does all this as an investment. Is it worth while? He is confident it is. He states that many of his customers are those who have married and started housekeeping since he started in business and that even when they have moved away from his district he has been able to retain their trade as well as their friendship; and he boasts, and that with evident reason for the claim, that he does more business for the size of his store than any merchant in his line in Toronto. This business is, too, done at a fair margin of profit.

He is not compelled to be ever scheming to secure some great bargain, some line which he can sell "away below cost" in order to catch trade or hold what he has. Nor does he find it necessary to keep his store open to unreasonable hours which take away all the pleasure of business and which frequently take the energy out of a man. He has found his business a pleasure and a delight as well as a means of weekly adding to the reserve fund of his bank account. His customers are used to him. His hobby of attention to them in past years is rewarded with their habit of regularly waiting to give him their orders.

Here is a method of competition which is singularly effective yet never annoying to a rival merchant in the same line. The vital force of being sunny, of extending the "glad hand" to every customer who enters the store, whether it be a mere toddler or a busy farmer, is incalculable. It pleases the customers and never arouses the "other fellow down the street" to any retaliatory action, as does the offering of a reduction of 1c. or so on some staple line.

Above all things, do not neglect a child because of some older person. The golden principle of "first come, first served" applies to all, regardless of age, even though sometimes not of sex. Some children are sensitive on this point. And they have right and justice with them in being so.

CONTINUED IMPROVEMENT.

W. E. LaChance, representative of Wood, Vallance & Co., Hamilton, writes: "I may say I am pleased to note the continued improvement in the general get up of your paper and am sure it must prove a valuable guide to hardware dealers, your market reports being so full and complete."

Good-Will as a Factor in Protection.

THE insistance of the demand for further protection by Canadian manufacturers has aroused widespread attention in all sections of the country. One who seeks the opinion of the trade will soon become convinced that there is a wide divergence of opinion regarding the matter. The sophistries of political orators and the crude deductions of amateur economists have done much to dim the public gaze in its examination of the question, which is essentially a business proposition.

Sentiment is undoubtedly a factor in business. The calmest and the craftiest of us at times become so biased by friendship or annoyance that we buy from one person though we feel it possible to have made a better trade with someone whom we do not like so well. The same characteristic is appealed to by the protectionist. He calls upon the patriotism and national spirit of the Canadian to put on higher tariffs to keep the foreign manufacturers out, and give the Canadian producer a better market.

The question at once arises, who is to pay the price of this patriotic solicitude of the welfare of Canadian manufacturer. "There's the rub." This is the question which demonstrates how general is the divergence of opinion regarding the matter. No class is united on the question. Among manufacturers as well as among merchants or consumers will be found apostles of a lower tariff as well as advocates of "a tariff like that of the United States."

So, while there is such a difference of viewpoint manufacturers who are seeking a higher tariff should in their business relations so act as to win respect and good-will rather to lose sympathy and good-will.

A study of the following correspondence, which came to hand in reply to a circular letter sent out asking the views of the trade as to how Canadian manufacturers could get a better grip on the trade in the Canadian West would be timely as well as interesting. It will be remembered that in the replies already published there was practically no suggestion of a higher tariff; the great thought was that Canadian manufacturers keep up the quality of the goods. The letters below cover another phase of the matter, one that should not be lost sight of.

Editor Hardware and Metal:

We are in receipt of your letter of December 22, referring to the reports of various members of the Manufacturers' Association as to their impression of the Great West. The writer has followed these reports with a great deal of interest, as they appeared in Hardware and Metal, and all that he can add is, that if the most optimistic view that was given, was multiplied ten times, it woull still be well within his own. Canada has here in the great Northwest an Empire, the possibilities of which, both for production and trade, will go on increasing with geometrical progression, and only lacks transportation facilities to make it a most valuable asset to the people of Canada.

Your request for our opinion as to "what can be done in order that the manufacturers and others in the East may secure the business that now goes to the manufacturers in the United States" is best answered, I think, by enclosed letter (published below) written to our purchasing agent in Vancouver, June 22nd, 1903, a copy of which was mailed to Dr. S. M. Wickett, the gentleman sent in here a year ago as the representative of the Manufacturers' Association, to inquire into the possibilities of the trade in the Yukon.

Should you publish this letter, be good enough to omit the name of the manufacturers referred to, as they have since agreed to furnish us the goods we require and are filling our orders this year. We submit it for the reason that it is the most direct reply we can give to your question.

What will tend to give the trade of this country to Canadians, more than anything else, is an all Canadian railway into this country, such as is projected by the Coast-Yukon Railway Co. Until we have that, or a Canadian port of entry to this very valuable part of the Northwest, this will never be the real asset to the Government of Canada that it ought to be, nor will Canadian Manufacturers be able to control the trade of the country with the population, as it now is, fully 50 per cent. American.

Trusting the above with enclosed correspondence may be of assistance to you, I remain,

Yours very truly,
J. R. GRAY,
President Dawson Hardware Company, Limited.

Dawson, Y.T., Jan. 18, 1904.

J. O. LECAPPELLAIN, ESQ.,
Agent, Dawson Hardware Co.
Vancouver, B.C.

We are in receipt of your letter of June 10th with enclosed correspondence from the ..... Manufacturing Co., Limited., of ....., Ontario, re manufacture of 200 dozen shovels to our order and having placed thereon label same as furnished last year with the firm name on, Dawson Hardware Co., Limited. As you are aware we have, since first opening business here, done our utmost to introduce and push Canadian hardware.

When we began business there was only one other Canadian concern handling hardware and that not a very live one. The large companies, being all American concerns, were stocked with American goods and when Canadian goods were of very inferior quality, the result was the demand was for American hardware, edged tools, etc.

When we took hold of the trade, however, we believed Canadian goods were equal to any other, we selected the best market, sold for less than the American goods were sold and very soon attracted the attention of our competitors, with the result that they found it paid to buy Canadian goods instead of American. So that to-day full 90 per cent. of the goods handled are of Canadian manufacture as against 10 per cent. shown by the customs returns of 1898. Consequently we believe to our own effort is due no small part of this change, but to get to the particular business in hand.

We furnished the ..... Manufacturing Co., as above stated, a sample of the best American shovel on this market, that is the one having the largest sale. We also kept them posted from time to time on changes and improvements re

rivetting, bend of handle, better finish, quality of goods, etc. They accepted our order last year early in the season for 200 dozen at a stipulated price. Later on, after having filled half of our order, they informed us that they were unable to fill the balance, giving sundry excuses for so doing and recommending us to some other factories to complete our order, when it was too late to place it and get shipment during open navigation. At a great additional cost we had to purchase 100 dozen shovels on the coast (in Seattle) in order to get shipment that season.

We again took the matter up this year and after correspondence re improvement of same shovel, additional information being furnished thereon, they again accepted our order for 200 dozen of the same shovels, filled 100 dozen of the order and now notify us (as per copy of their letter attached which speaks for itself) that they are unable to fill the other part of the order as agreed upon.

The trade built up on these goods is distinctly our own, due solely to our own efforts and our standing here which was sufficient to introduce them on the market. The manufacturers have not spent one dollar in either introducing or selling these goods. They have not even paid the expressage on the pattern furnished nor have they gone to the expense of sending a man to get our orders, as they were placed by mail to be delivered in large quantities. In view of all this we consider their action most unfair, unbusinesslike and unwarranted.

No American firm would treat their patrons in such a shabby manner and hope to retain their trade. We would, therefore, instruct you to communicate at once with a number of American factories and get a price on the manufacture of these goods just as we want them for next season.

In the meantime we will be obliged, owing to the short time left, to ask the ..... Co. to fill and forward the balance of our order as they accepted it on that understanding. We want no substitute and we will not attempt to introduce and advertise their brand of goods when we can get our own.

We fear this house has done much to turn us to American concerns as it was our intention to have patterns of picks sent to Canadian factories so that we might place orders in this line in Canada instead of in the States as we have been doing. But judging from the way this Canadian house has handled our shovel order we do not care to take the risk of change.

If you think it necessary, as our representative in the Vancouver Board of Trade, bring this matter to their attention. We will take it up direct with the Manufacturers' Association and possibly publish it in Canadian Hardware and Metal as well.

We are as patriotic and as much interested as any in the development of our country's industries, but when it comes to such unbusinesslike methods self interest and self preservation dictate our course.

You will give as much of this correspondence to the .....:.. Manufacturing Co. as you deem necessary, and the other instructions your immediate attention, and oblige,

Yours very truly,

J. R. GRAY,

President Dawson Hardware Company, Limited.

ELECTRICAL GOODS IN HARDWARE STORES.

OUR readers seem to agree with us that the progressive hardware man must look for increased profits not in an expanding trade in staples sold at cut prices, but in the extension of his stock in trade to include new lines in which competition has not been so fierce and in which profits are larger. A hardware man who had been away from Canada for ten years and out of touch with conditions here would be surprised to find on his return to what great extent this idea has been followed out by Canadian hardware men. He would find the principle admitted by nearly all hardware merchants, the only question in their minds being what new lines it is advisable to handle.

A new line to which many Canadian hardware merchants have been paying particular attention of late is that of electrical fixtures and supplies. To many hardware merchants it is a new line, but those who have not been following this development in the Canadian hardware trade would be surprised to find how many merchants are selling these goods.

There are several reasons why hardware men consider electrical goods a suitable line to handle. In the first place, it is a profitable line and a line for which in every Canadian town there is a demand. There is scarcely a village now of any pretensions which has not its electric lighting plant and the alert hardware man is getting the trade in electric lamps. For these, there is a constant demand and they form the basis of a more extensive trade. The ambitious hardware man is not content with a trade in plain incandescent lamps only. He is adding a stock of fancy lamps, rosettes, and electrical fixtures of an ornamental nature which prove an attractive feature of his store. There are many customers who require only to be shown these goods to be interested in them and it is not difficult with a little judicious pushing to develop a profitable trade.

By handling these goods the hardware man should be able to interest the ladies who are the wealth distributors of the country. The hardware store has been too long regarded as almost exclusively a men's store. The ladies have not been interested in the hardware store as they have been in the grocery store and this has not been to the advantage of the hardware merchant. For this state of affairs there have been two reasons. Hardware is not so interesting as groceries. It is proverbial that womankind can not drive a nail and the hardware store has been regarded only as the home of the hammer and nail and similar uninteresting goods. Moreover the stock being confined to such uninteresting staples which do not admit of much display, the hardware store of ye olden days was not very attractive.

But the merchant who extends his stock, who carries such lines as sporting goods, silverware and electrical goods, all of which admit of good displays, makes his store more attractive and interests a wider circle of customers. Electrical goods in particular lend themselves readily to very attractive displays and do much to brighten a store which might otherwise be considered dull by some people.

Electrical goods constitute a profitable line easily and inexpensively handled. Their introduction in a hardware store should lead to further extensions of the stock, all of which mean profit. The progressive merchant will consider the matter.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 3, 1904.

BUSINESS is still handicapped by the blockade on the railways and the impassable condition of the country roads. The blockade was lifted for two or three days last week and particularly in the Province of Quebec some relief was felt. This week the tie-up was worse than ever and even on the main lines the railroads have been chary about acceping freight. Especiall in Ontario, the travellers are unable to make their regular trips and there has been a marked falling off in the number of orders sent in. Mail orders are reported to be on the increase, but these are generally for immediate requirements and it is almost impossible to make deliveries. Some retailers are sending in large orders for April and May shipment without waiting for the traveller's call. As retail business throughout the country has been practically at a standstill for the last two months owing to the impassable condition of the roads, the country merchants have been unable to make collections and in many cases they are being carried by the wholesale houses who are also obliged to wait for their money. Money is very tight, but it is generally felt that the blockade must soon be broken and that the end of the month will see an unprecedented rush of business.

There are not many price changes to report this week. At the meeting of the Wholesale Hardware Association held here on Monday it was decided to advance the price of manila and sisal rope 1-2 cent per lb. Barb wire is to remain at present prices. New lists have been issued this week for Peterboro' and Gurney-Tilden locks and general building hardware. They are too lengthy to be published in Hardware and Metal, but no doubt most hardware men will have received a copy by the time this paper is in their hands. The discounts are now 50 and 10 per cent. off the new list (March, 1904). Screw hooks and hinges 12 inches and up are quoted now at $3.25 and 6, 8 and 10 inch at $4.25. Deliveries on heavy T and strap hinges are very slow. The factories are behind on certain sizes. We quoted last week new discounts on bed staples. These are the discounts on the Dominion Wire Company's list. The discounts on the list of the Montreal Rolling Mills Company are given below.

Poultry Netting—A few more orders are reported this week for April shipment, but business this week has not been so large as last. Prices continue steady at former quotations. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—These are now in considerable request for Spring shipment. They have figured in a number of the mail orders received this week. We quote again, as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb. boxes, $12.50 list; 25 and 50-lb. boxes, $12.25 list; 100-lb. boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—There are two lists in force at present, that of the Dominion Wire Company and that of the Montreal Rolling Mills Company. The new discounts noted in last issue were those of the list of the former company. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent. The discounts on the Montreal Rolling Mills Company's list is 57 1-2 per cent.

Blind Staples—As noted in our last issue, the discount on blind staples is now 40 per cent. This means a slight fall in the price.

Boxwood Rules—As noted in our last issue, the price is now somewhat steadier after months of uncertainty. The discounts range from 52 1-2 to 50 per cent. off list.

Lawn Mowers—A few more orders for April shipment have come in this week. Prices rule steady at the following figures: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Garden Hose—Also in fair request at the following discounts: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—The discount is 60 per cent. Orders for Spring delivery are now being booked in fair number.

Spring Hinges—Still in very good demand considering the railway blockade. A few mail orders are calling for spring hinges. Prices remain as follows: No. 5, $17.25 per gross; No. 10, $18 per gross, No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Game Traps—The discount on "Victor" is 72 1-2 per cent. and on "Hawley and Norton" 60 and 2 1-2 per cent. An occasional order is still being received.

Wire Nails—There is nothing new to report. Prices are fairly maintained. We quote the following prices: $2.40 per keg carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, and St. John.

Cut Nails—Prices rule steady at former quotations. There is very little doing. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—Some heavy deliveries will be made in April and May as orders coming in now are for large quantities. Business this week has been considerably less than last week but the falling off is no doubt due to the blockade. We again quote as follows: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—The discount is 25 per cent. A few more large sales have been reported recently.

Horsenails—The discount on "countersunk" heads is now 57 1-2 per cent. Trade is very quiet at present. We quoet: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 57 1-2 per cent.; "C" brand, 40,10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—Business is now very dull but in what little trade is doing the prices quoted are being well maintained. We again quote as follows: Iron shoes light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90;

No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal onlv.

Screen Wire Cloth—A good proportion of the orders for next season have already been booked. The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Trade continues very quiet. Prices are still as follows: Nos. 6, 7, and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—Trade this week has been very quiet. For immediate shipment there is nothing doing, but for forward delivery there is some business. Prices remain firm and unchanged as follows: No. 5, $3.65; Nos. 6, 7 and 8 $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—It was noted in our last issue that the lower prices quoted for some time to the retailers of Canada by one American manufacturer have been withdrawn. At a meeting here this week of the Canadian wholesale Hardware Association the whole situation was discussed and it was decided to maintain the prices which we have been quoting. We again, quote as follows: $2.75 per 100 lbs. f.o.b. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is only a moderate demand. Prices are as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Fine Steel Wire—There is only a moderate enquiry. The discount is 25 per cent., with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs.; 1-2-lb. hanks, 37 1-2c.; 1-4-lb. hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—The demand continues steady for future delivery. Prices are firm and unchanged. The discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—There is nothing of special interest to report. We quote the following unchanged discounts: Carriage bolts, common ($1.00) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1.00) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1.00) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3.00) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; bolt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes, 4c. per lb. off; nuts, hexagon, all sizes, 4 1-4c. per lb. off.

Washers, 45 per cent. off.

Screws—In brisk demand. Manufacturers have overtaken their orders and should be able to meet the demand this season without the delays which were experienced last season. The discounts are unchanged and remain as follows: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—Business is entirely of a sorting nature. There is little doing. We again quote as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London. St. John, N.B., and Halifax.

Cordage—Manila and sisal rope have been advanced 1-2 cents per lb. Cotton goods are firm. We quote: Pure manila, 15c.; British pure manila, 12 1-2c.; sisal, 12c.: double lathyarn, 11c.: single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 20c.; cotton twine, 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30 to 31 1-2c.; cotton candle wick, 22 to 24c.

Building Paper—Trade continues fair at following unchanged prices: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll: dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—Trade is still dead and prices as before. We quote: Canadian cement $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade is dead. Quotations are: English, $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

Some good orders for plumbing goods have been received during the week, but trade is greatly handicapped by the snow blockade. Mail orders are numerous.

Lead Pipe—Business is good. The price is 8c. for composition and 7c. for ordinary. The discount is 35 per cent.

Iron Pipe—This line has been in splendid request all Winter and the demand continues steady. We quote the following prices: Standard pipe per 100 feet, in lengths under 19 feet—black, 1-8-in., $2.30; 1-4-in., $2.30; 3-8-in., $2.55; 1-2-in., $2.85; 3-4-in., $3.65; 1-in., $5.20; 1 1-4-in., $7.35; 1 1-2-in., $8.95; 2-in., $12.55. Galvanized—1-4-in., $3.20; 3-8-in., $3.45; 1-2-in., $3.90; 3-4-in., $5; 1-in., $7.20; 1 1-4-in., $10.05; 1 1-2-in., $12.20; 2-in., $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in., $4.20: 3-4-in., $5.25; 1-in., $7.55; 1 1-4-in., $10.55; 1 1-2-in., $12.75; 2-in., $17.60. Galvanized—1-2 in., $5.20; 3-4-in., $6.65; 1-in., $9.55; 1 1-4-in., $13.25; 1 1-2-in., $16; 2-in., $21.90. The discount on all sizes of extra heavy pipe is 12 1-2 per cent.

Soil Pipe and Fittings—This line continues in steady demand at following dis-

counts: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—Wire solder is quoted at 18 1-2c. and bar solder at 18c. These prices are well maintained.

METALS.

The metal market has been quiet this week and there is not much of interest to note. The freight blockade is responsible for the present dull spell. It must not be thought, however, that trade is dead. Mail orders are numerous and from some sections travellers are sending in good business. A tremendous rush is expected in April and buyers would be wise to book their orders early in order to ensure prompt delivery when the blockade is lifted. The general tone of the market is firm. Last week's quotations for tin and copper still obtain, but both items are strongly held. Pig lead is also very firm in sympathy with the strong English market. Present prices give the metal houses a very narrow margin of profit and concessions are not likely to be made. Tinplates are also very firm.

Pig Iron—There is still very little activity. Summerlee is quoted at $20.25 to $20.75 per ton.

Bar Iron—No further reduction has been made since last week. There has been considerable activity in the market recently. We quote Merchants' bar $1.75; horseshoe iron $2; forged iron, $1.95.

Black Sheets—Firmly held in sympathy with the strong primary markets. We quote as follows: 28-gauge, $2.35; 26-guage, $2.30; 22 to 24-gauge, $2.25; 18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—There is not any special activity. We quote the following prices: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There is a slight improvement in the demand but there is not much doing. We quote as follows: Black Diamond, 8 to 9c.; Saunderson's, 8 to 9c. according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-4c.

Sheet Zinc—Trade is fair. For cask lots the price is $6.15 to $6.25 and for smaller lots the price is $6.50.

Galvanized Iron—There have been some large bookings lately but there does not appear to have been much activity this week. We quote for 28-gauge: Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—The English and Welsh markets continue firm in tone and in consequence prices here are stiff. Cokes, $3.75 and charcoals $4.

Terne Plates—The price remains steady at $6.75 to $7, the former quotation being for large quantities.

Ingot Tin—The remarks made last week still apply. The market is firm and except for unusually large quantities concessions are not obtainable. For all ordinary business the price is 32 to 32 1-2c.

Ingot Copper—Still steady at former prices. We quote 13 3-4 to 14 c. per lb., subject to some slight concessions for large quantities.

Antimony—Still firmly held at 8c. per lb. Supplies are not large ,but business is small.

Coil Chains—We quote again as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch., $4.00; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-in., $3.55; 5-8-in., $3.35; 3-4-in., $3.30; 7-8-in., $3.25; and 1-in., $3.20, with 10c allowance on carlots.

Canada Plates—Very firm both in England and Canada, but no advances have been made here. There is not much activity at present, but there is some enquiry from various points in the Province of Quebec where Canada plates are used for roofing. We quote again the following prices: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Pig Lead—Very firmly held at prices quoted below. The English market is very strong and metal houses here have a very small margin of profit. We quote $3.25 to $3.40. The former price is for large lots only.

Zinc Spelter—Quoted still at 6c.

Scrap Metals—There is not much activity at present. Prices are: Heavy copper and wire 10 to 10 1-2c. per lb.; light copper, 10c.; heavy red brass, 10 to 10 1-4c.; heavy yellow brass, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-2c.; zinc, 2 3-4c. to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $14 to $15; stove plate, $12; mixed country rags, 65c. to 75c. per 100 lbs.; old rubbers, 6 to 6 1-4c. per lb.

ASHES.

There has been no change in this. The market is quiet, but prices are firm. We quote:

First pots	6 10	6 20
Second pots	5 70	5 75
Pearls	7 25	7 50

HIDES.

There has been no change. Offerings are more liberal, but still not up to what is expected. We quote:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

ONTARIO MARKETS.

Office of HARDWARE AND METAL,
10 Front Street, East.
Toronto, March 5, 1904.

A FEW orders have been received for immediate delivery throughout the provice, but the railways have been unable to make deliveries by freight and goods ordered for March delivery are still in warehouse. City business is excellent as the retailers are anticipating a brisk building season. The market is steady throughout, price changes showing, as a rule, a distinct advance. Canadian manufacturers of builders' supplies have issued a new list, which in many cases carries an advance of fully 25 per cent. This is, however, offset to some extent by the issue of new discounts which are larger than formerly. At a meeting of the wholesale dealers in Montreal this week an advance of 1-2c. throughout was made on rope. A strong demand for leather belting is recorded and some talk of an advance in this line is heard. A rise of 10 per cent. in raw is expected to stiffen the price of rubber products such as hose, etc. Axe handles are scarce and an advance is claimed to be inevitable by some dealers. In other lines the market bears no change.

Screen Wire Cloth—Orders are practically all in. Prices steady at $1.50 per 100 square feet.

Spring Hinges—A fair business is reported. Prices are steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—There is not much doing. Prices are as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14,

MIDLAND, ONT. Limited

\$3.70. In carlots f.o.b. Cleveland, No. 5, \$2.15; Nos. 6, 7, 8, and 9, \$2.10; No. 10, \$2.15; No. 11, \$2.20; No. 12, \$2.25; No. 13, \$2.35; No. 14, \$2.45. In less than carlots, 12 1-2c. per 100 lbs. extra charged.

Barb Wire—A few orders still coming in. Our quotations are as follows: \$2.75 per 100 lbs. f.o.b. Toronto, and \$2.50 f.o.b. Cleveland. Carlots of 15 tons, \$2.40 f.o.b. Cleveland.

Coiled Spring Wire—The market is steady. A fair trade is doing. We quot the following prices: No. 9, \$2.70 per 100 lbs. f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c.; carlots, \$2.65, freight allowance to 20c.

Wire Nails—A moderately good trade is doing with prices firm; \$2.45 per keg f.o.b. Toronto, with carlots \$2.40. change. We again quote as follows:

Cut Nails—Not much doing. Prices are now steady at \$2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—There is practically nothing doing. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, \$3.80; No. 1 and smaller \$4.05; snow pattern, No. 2 and larger, \$4.05; No. 1 and smaller, \$4.30; light steel shoes, No. 2 and larger, \$3.95; No. 1 and smaller, \$4.20; featherweight, all sizes, 0 to 4, \$5.50; toe weight, all sizes, 1 to 4, \$6.75. If shipped from factory 15c. less.

Horsenails—The market is quiet. We still quote discounts as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—A fair trade is doing. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—A small amount of business is doing. We again quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—There is a fair business at unchanged prices. We quote the following prices. Carriage bolts, common (\$1 list), 3-16 and 1-4-in.,

"DOMINION CROWN" Polished Sheet Steel.

Cordage—An advance of 1-2c. per lb. in manila and sisal rope has been agreed upon by wholesale dealers. Prices are firm at the new figures. We quote: Pure manila, 15c.; British pure manila, 12 1-2c.; sisal, 12c.; double lathyarn, 11 1-2c.; single lathyarn, 11c.; double shingleyarn, 11 1-2c.; single shingleyarn, 11c.; sashcord "Hercules," 29 to 30c; "Star," 36 to 38c.; cotton rope, 3-16-in. and up, 20 1-2 to 22c.; 5-32-in., 25 to 27c.; 1-8-in., 25 to 28c.; cotton twine, 3-ply, 23 to 24c.; 4-ply, 27 1-2 to 28c.; calking cotton, 16c.; cotton waste, colored, 6 3-4c.; white, 10 to 12c.

Woodenware—Prices keep firm. Orders have been liberal but the freight blockade is tying up business. We quote as follows per dozen: Washboards, Victor $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c.; Diamond King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails, No. 1, 2 hoops, $1.75 and 3 hoops $1.90. Matches, Sure Light, parlor, 500s, $3.50; Flashlight, parlor, 1,000s, $5.75; Kodak sulphur, 65s, $3.80.

Building Paper—The market in building paper is dull, although manufacturers report that future shipment orders are coming in thick and fast, a sure sign of a busy Spring season. Last week's prices continue unchanged. We quote the following prices: Tarred felt, $1.85 per 100 lbs.; 2-ply read roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c. per roll.

Cement—The cement market continues practically unchanged. Nothing can be shipped at the present time, and the local demand is only fair. If the weather opens up a good brisk demand for cement ought to be created within the next two weeks. We quote small quantities: Canadian Portland, $1.90 to

C. M. CUTTS & CO.,
TORONTO JUNCTION.

$2.25; American Portland $2 to $2.10 f.o.b. Toronto.

Firebricks—Firebricks are quiet this week, but will find a ready sale as soon as the weather opens up. We quote English and Scotch, each, at 28 to 35c.

PLUMBING GOODS.

This season's trade is opening auspiciously; already a large number of orders have been received by manufacturers of which the interesting feature is an increasingly large number from the West. Manufacturers are being deluged with enquiries from all quarters. There has been considerable decrease in the price of range boilers, the quotations for this week for 30, 35 and 40 gallon boilers being $4.75, $5.75 and $6.75. Prices in other lines continue practically unchanged from last week. Our quotations are as follows:

Lead Pipe—Trade in lead pipe continues steady but is somewhat lighter than for the past two weeks. We quote: Lead, 7c.; lead waste pipe, 8c.; discount 35 per cent.

Soil Pipe and Fittings—The market in soil pipe and fittings is quiet with a fair amount of business being done. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

Iron Pipe Fittings—Iron pipe fittings are lively this week, with big demand. We quote: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs. 57 1-2 per cent.; nipples, up to 2-in., 65 per cent.; nipples 2 1-2 to 6-in., inclusive, 60 per cent.

Copper Range Boilers—Trade in copper range boilers continues fair. Discounts at 15 per cent. continue.

Brass Goods—Trade is improving in brass goods. Valves and steam specialties are moving particularly well.

Iron Pipe—Iron pipe is active this week, and prospects are excellent. Last week's discounts continue. We quote f.o.b. Toronto: 1-8-inch,$2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch, $11.05; 2 1-2-inch $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

METALS.

The metal market seems to be particularly embarrassed by the freight blockade. The railroads, with the exception of a short while on Thursday, have refused to accept and have been unable to make deliveries. This condition of affairs is already causing inconvenience and if long continued would surely result in serious loss to both dealers in and users of metals. The market is steady though inactive.

Pig Iron—The United States market seems stronger and a healthy tone is manifest locally. Prices are consequently steady at $18.50 for No. 1 and $18 for No. 2 f.o.b. Toronto. Prices at Midland are $1.50 lower.

Bar Iron—A fair business is reported with prices nominally unchanged. Our quotations are as follows: $1.80 f.c.b. Toronto for extras cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft. 20c., over 20 ft. by special agreement according to length and size.

Black Sheets—Some import orders have been taken but business from stock is suspended. Prices are steady. We quote as follows: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—Business keeps fairly active. Prices are unchanged. We quote the following prices: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A fair trade is doing. Locally there is no change, the quotations being 30 to 30 1-2c.

Galvanized Sheets—A fair demand is reported at firm prices. We quote as follows: Queen's Head, $4.25 for 28 gauge; American, $4 for 24 gauge; Bell brand, $4.25 for 28 gauge; Gordon Crown, $4.25 for 28 gauge.

Tinplates—Prices are steady, with a fair demand. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—Both ingot and sheet are in excellent demand for import. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—The market keeps firm both locally and at primary points. We quote: $3.30 per 100 lb. for pig lead and $3.65 for bar lead.

Zinc Spelter—The volume of business is not large. Prices are unchanged at 6 to 6 1-2c. per lb.

Zinc Sheets—The market is firm and a fair business doing in smal lots. We quote: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c., and wiping, 17c.

Antimony—8c. per lb.

Old Material—The snow still continues to hold back the supply of old material. The demand is good with prices very little different from last week's quotations. We quote: Heavy copper and wire, 10 1-2c. per pound; light copper, 9c. per pound; heavy red brass, 9 1-2c. per lb.; heavy yellow brass, 8 to 8 1-4c. per lb.; light brass, 5c. per

THE POPULAR CEILINGS FOR PRACTICAL PEOPLE

We claim that our Metallic Ceilings and Walls are the very best style interior finish made.

Sanitary—Artistic—Fireproof—exceedingly durable, and capable of an immense amount of variety in coloring and effect.

They satisfy all buyers—no imperfections—no stinting of quality — highest-grade materials and workmanship throughout.

If you're wise you'll always carry them in stock.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

lb.; lead, $2.35 per cwt.; scrap zinc, 3c per lb.; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c. per lb.; country mixed rags, 50c. per 100 lb.

PETROLEUM.

The price of petroleum oil declined 3c. per barrel in Pittsburg this week and is now quoted at $1.77. The whole tendency is now downward. At one time in 1903 prices were as high as $2 per barrel. The Canadian market has not yet followed the reduction in the United States, but is easy at present. We quote the following prices: Canadian prime white, 19 1-2c.; Canadian water white, 21 1-2c.; American prime white, 20c.; American water white, 22c., ex-warehouse.

Hides, Skins and Wool.

A weaker tone in the local market for hides is noted. A decline of 1-2c. is reported in all grades except cured, which remain unchanged. As usual, the influence of the outside markets is largely responsible for the weaker tendency. We quote the following prices:

HIDES.

No. 1 green, per lb.	0 07
" 2 " "	0 06
" 1 " steers, per lb.	0 08½
" 2 " "	0 07½

STEEL TOWERS INSTEAD OF POLES.

It is proposed by the Electrical Development Company to use steel towers, some 50 feet high, at distances of 400 feet, to string their line from the Falls to Toronto, thus replacing with modern apparatus the wooden poles for the distance of 80 miles. There will be four transmission lines of 10,000 horse power each.

THE TIN MARKET.

London, March 2.—Spot tin opened firm at £123 17s. 6d., futures £124 7s. 6d., and after sales of 250 tons of spot and 350 tons of futures closed firm at £124 2s. 6d. for spot and £124 10s. for futures, making price as compared with yesterday 15s. higher on spot and 15s. higher on futures.

New York, March 2.—The scarcity that has existed for over a week in pig tin for spot delivery still shows no signs of being relieved, although some 600 tons arrived today on London steamer which will be available for delivery by Friday. Actual spot tin is extremely scarce and closely controlled and held at 28.35. Tin ex steamer "Marquette" at dock is now held at 27.90. In spite of the scarcity and strength of the spot market and ex s. s. at dock, tin is offered for delivery for March at 27.45, but there appears to be no business doing in future deliveries. It remains to be seen what effect the scarcity and high prices ruling in New York for spot tin will have on the London market. Certainly the foreign market is getting lots of encouragement from the prices ruling in New York market.—The Metal Worker.

MAY ERECT A NEW FOUNDRY.

The Vokes Hardware Company have purchased the old Rennie wharf at foot of Jarvis street, which has for so long been used by the city and other parties for storing stone and iron. The property has a width of about 70 feet on the Esplanade, and runs out to the new Windmill line. Part of the site will be used as a storage and shipping warehouse. The company also contemplate erecting a foundry.

The dissolution of partnership of Richard & Genois, general merchants, St. Raymond, has been registered.

GERMAN STEEL COMBINE.

Press despatches from Berlin, dated March 1, say that after long and tedious negotiations the German Steel Syndicate has finally been organized among 26 of the largest concerns in the country. The smaller manufacturers, whose output ranges from 1,000,000 to 1,500,00 tons annually, were excluded. The delay in the negotiation was due to excessive allotments asked by the Krupp concern, which finally agreed to the syndicate plan to-day. Two large concerns are still out of the combine. The syndicate extends to June 30, 1907, and covers all forms of commercial steel.

THE PASSING OF THE HAND-NAIL MARKER.

WHEN the history of the Bromsgrove Society of Co-operative Nail-forgers comes to be written, it will constitute one of the most pathetic chapters in the story of the hand-made nail trade, says the Ironmonger. The little band of craftsmen who began this enterprise were forced to take that step in self-preservation. Their work was hard and exacting, their hours of labor long, yet they were poorly paid, the miserable pittance doled out to them by their employers, the nail-masters, being barely sufficient to keep body and soul together. Yet their masters could not help themselves. With the "forger"—that is, the truckster — who doled out nail-rods to the operatives in the morning, and gave a few groceries in exchange for the finished nails in the evening, on the one hand, and the manufacturer of machine-made nails on the other, the honest nail-master was "twixt the devil and the deep sea." He was compelled to cut his prices until there was nothing in the trade either for himself or his operatives. Hence the latter came to attempt the expedient of buying their rods direct, fashioning them into nails, and selling the products of their labors on the open market for the best price they would fetch. But the forces which operated against their masters fought against them also, and in a few years they found themselves as badly off as they were before they attempted to work out their own salvation. At the annual meeting of the society, held at Sidemoor, near Bromsgrove, on February 1, a report was presented showing the results of the society's operations during the past year. From this it appears that there was a falling-off in the trade during the year amounting to 29l., and that the total profits on the year trading amounted to 167l. Out of this modest income it was decided to pay a dividend of 10 per cent., absorbing 57l., to give the workers a bonus of 22l., to award 13l. to the committee of management, to pay 27l. into the provident fund, to contribute 13l. to the social fund, and to give the customers a bonus of 27l., thus leaving a balance of 4l. to be carried forward to next account. In presenting this report the secretary remarked that it was really fortunate that the hand-made nail trade was dying out, and that thousands of workers had secured employment in other trades. He had never known a nail-maker who was not a poor man.

BUSINESS CONDITIONS IN MANITOBA.

Office of HARDWARE AND METAL
Room 308 McIntyre Block,
Winnipeg, Feb. 29, 1904.

THE Spring rush of shipping is now on and though comparatively little freight has gone West within the last 10 days there are a multitude of cars of hardware loaded and ready for shipment as soon as traffic assumes a more normal condition. Hardware merchants report that Spring business opened unusually early and that more business was done by country merchants during bonspiel week than ever before. Hardware houses appear to be in dead rush of work and many of them are again working overtime.

There have been no changes of price of any note to record during the past two weeks but there seems liklihood of considerable change before the end of the present week. In paints and oils the declines in other markets have not yet appeared in list prices here but will no doubt be posted within the week.

Ideal Woven Wire Fencing

Made from No. 9 Hard Steel Galvanized Wire.

The lock which binds stay and horizontal wires together is most positive. Cannot be moved or disconnected.

Ample allowance made for contraction and expansion.

12 different styles carried in stock.

Put up in 20 and 40-rod rolls.

Already to set up.

Requires few posts.

Fits any surface.

It makes a fine appearanc- when well stretched.

Made to last. A permanent improvement to your property.

One Agent Wanted in Every Town.

Write for prices and terms.

Contracts made early insure prompt delivery.

PITTSBURG PIPE PRICES HIGHER.

PITTSBURG, Mar. 1.—Effective to-day, the leading interest has promulgated a new list of discounts, putting up steel pipe all sizes from ⅛ to 6 inches by one point. Steel pipe 7 to 12 inches is left at the former price, and iron pipe is not touched, nor are boiler tubes. With the change on steel pipe, the entire list of discounts, on carloads to consumers, is as follows:

Merchant Pipe.

	Steel. Black.	Steel. Galv.	Iron. Black.	Iron. Galv.
⅛, ¼ and ⅜-inch	68	58	66	56
½-inch	71	61	69	59
¾ to 6-inch	75	65	73	63
7 to 12-inch	71	61	68	58
Extra strong, plain ends.				
⅛ to 8-inch	67	57	64	54
Double extra strong, plain ends.				
⅛ to 8-inch	59	49	56	46

Boiler tubes.	Steel.	Iron.
1 to 1½-inch	42½	39
1¾ to 2¼-inch	55½	38
2½-inch	58	43
2¾ to 5-inch	64½	50½
6 to 13-inch	55½	38

The previous advance was made Feb. 1, and carried a point all through iron and steel, except on sizes 7 to 12 inch. Thus on sizes less than 7 inch the new prices are one point higher on iron and two points higher on steel, than those in force during January. The reduction made the end of last year was two points all around, except on half inch, where it was three points, so that half inch steel pipe is still one point below the price which ruled during 1903, and in fact since the reduction made November 12, 1902.

As the National Tube Company does not make a great deal of iron pipe it can be said as a general proposition that its prices except on 7 to 12 inch are about restored to the list of 1903.

The list prices per foot on pipe, either black or galvanized, figure out approximately 10 cents a pound, based on the nominal weight per foot, so that it can be said pretty accurately that a shifting of discounts of one point means a change in price of one tenth cent, or $2 per ton of 2,000 pounds.

It is understood that the company has been booking business quite heavily ever since the advance of February 1, and is in a comfortable position. On the large sizes, of course, business has not opened up to any great extent as yet as the season is not far enough advanced.

STEEL TRUST BUYING PIG IRON.

PURCHASES of pig iron by the U. S. Steel Corporation are always watched with great interest, so the announcement this week that this organization is in the market for about 100,000 tons has excited much attention. The latest report to hand is the following from the Metal Market:

"The announcement of completion of purchase of pig iron by the United States Steel Corporation was a trifle premature. We wrote our account of it on Saturday on the strength of information that an official statement of the deal was to be given to the Associated Press that night, and this was one as we were assured it would be.

It develops now, however, that the papers have not been signed yet, a there is some switching around. W. B. Dickson, of the Steel Corporation, will be in Pittsburg to-morrow, and the deal will probably be closed up then.

"There is no question about the price. It will be $13 f. o. b. valley furnace. There is no coke arrangement about it, it being a straight purchase of pig iron. The tonnage will probably be abo 100.000 tons. It now appears that this will be divided about the same as t last tonnage of steel corporation, when the Bessemer Furnace Association got about half, the W. P. Snyder interests about half, while a short time before the Cleveland Furnace Company had gotten a fair sized order. J. G. Butler, Jr., of the Furnace Association, was in Pittsburg this morning but left suddenly for Youngstown shortly after noon. He will return in the morning to meet Mr. Dickson."

THE COPPER MARKET.

London, March 2: Spot copper opened quiet at £56 15s., futures £55 15s., and after sales of 50 tons of spot and 25 tons of futures, closed quiet at £56 15s. for spot and £55 15s. for futures, making price as compared with yesterday 2s. 6d. higher on spot and 2s. 6d. higher on futures.

New York, March 2.—London market steady, prices 2s. 6d. higher for both options.

The exports of copper for the month of February as per returns to date stand at 13,284 tons against 11,764 tons for the same month last year.

The demand from consumers is disappointing and holders willing to ma concessions on all fair sized orders. Small lots of standard brands of l for quick delivery are booked at 12 50 while for March-April delivery 12 5- can be done and the market can be called a shade easier with sales reported at 12⅜.—The Metal Market.

LIVERPOOL TINPLATE MARKET.

Liverpool, Feb. 20.—Business generally has been rather quieter throughout the week, but values are kept steady in sympathy with materials. The inquiry for oil sizes has not been as active as of late; buyers having supplied their wants in ample fashion, and makers indisposed to contract on any unremunerative basis. Prices are 11s. 6d. and 16s. 6d. to 7½d. in each case. I. C. 14x20 are to be had at 11s. 3d. in choice brands and are more inquired for, with buyers over at 11s. 1½d. Squares and odds are generally held for 11s. 6d. with sales at this price on home account and 11s. 4½d. for export. 28x20, 112 sheets, selling at 22s. 9d., prompt plates. "Allaway" grade charcoals quiet at 12s. to 12s. 1½d.

Waster 14x18¾, 10s. 9d. Waster 14x19¼, 10s. 10½d. Waster 10x20, 14s. 7½d. Waster 14x20, 10s. 9d. sales; 100 lbs. 10s. 7½d. Waster 28x20, 21s. to 22s. Finished S. M. Blackplate nominally 7e. 6d. to £8 10s. Steel bars £4 5s.—The Metal Market.

Demand of the assignment of L. S. Plamondon, general merchant, South Durham, has been made. Mr. Plamondon has since offered 60c. on the dollar, cash.

TRADE CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

THE lumbermen of this coast are very much exercised over the assertions made by F. W. Peters, assistant general traffic manager of the C. P. R., that the company will not make the reduction in freight rates on lumber, which it was expected would follow the recent conference in Winnipeg. Mr. Peters, whose headquarters are at Winnipeg, is here on a visit to his department, and as that is freight, he should be in position to speak with authority. He says the present is not a very propitious time for British Columbia to ask for freight concessions. The British Columbia Legislature has just passed the new assessment act, which forces railway companies to pay taxes on a $10,000 per mile assessment on every mile of railway in the province.

Regarding the previous suggestion that the C. P. R. should go into lumber manufacturing, Mr. Peters says that unless the prices of lumber are kept within bounds the company would have to do so to protect the settlers in Manitoba and the Northwest Territories. Mr. Peters had a conference with the merchants of Revelstoke, when on his way to the coast, regarding their desire to secure freight rates which would enable them to become a distributing centre, and compete with the coast merchants on a fair basis. He informed the merchants there that he could not see his way to granting or recommending such concessions, since at present the rates paid in interior points (such as Revelstoke) are the through rates from Montreal to the coast, plus the local rate back from the coast to the point of delivery. That is, the Vancouver wholesale merchants can sell in Revelstoke at exactly the same price the Revelstoke merchant can, though the goods might have travelled to Vancouver and back again. Further, the Revelstoke merchants are not given a distributing rate from their city to equal or compete with the rate from the coast to other interior points. The railway company, in explanation, points out that owing to competition with low rates of cargo carrying by ocean steamers and ships the railways are forced to make very low rates to coast terminal points.

* * *

The Provincial Mining Convention which met in Victoria this week discussed among other things the securing of free oil importations for the Elmore reduction process with ores. This process has been established in the Kootenay district and is proving a success. It is, moreover, lively to become generally adopted. In moving to ask for the removal of duty on oil used in the process, the convention also resolved to ask for free importations of supplies and machinery for mining.

* * *

The possibility of three reduction plants for zinc and lead ores is being discussed. F. Fernau, representing British capital, is in the province to look into the situation in connection with the proposals. These include a lead smelter for the reduction of wet ores, a zinc enriching plant and a zinc reduction mill. The zinc enriching plant will be established in the Slocan district, presumably at the head of Slocan Lake. It is the present intention to begin operations as soon as the snow is off the ground. By this enriching plant the ordinary zinc concentrates which can be turned out at most of the Slocan mines will be enriched by magnetic process until they will bear transportation to the zinc reduction workers to be established later, or until it will pay to export them. It is estimated that the Slocan mines can turn out 40 per cent. concentrates. The enriching plant will increase this percentage to 55 or over, and by this means, and the reduction being done in the province, haulage of heavy concentrates will be saved in shipping to Belgium or elsewhere. Prices realized for ores will be consequently enhanced.

* * *

The lead miners of the Slocan district expect that the war between Japan and Russia will give them better prices for their product. Some even go so far as to say that a veritable boom will strike the district if the war keeps up. Others, however, lay the fact of present activity to the commencement of payments of lead bonus by the Dominion Government. At any rate, there is at present great activity in the district. More mines are beginning to ship every week and the towns of Sandon and New Denver, in the heart of "Silvery Slocan," are taking on an air of great activity.

* * *

Toronto people who own the Dominion Copper Co.'s properties near Greenwood are said to be contemplating the re-opening of these mines. In that connection it is said that Breen, formerly manager of the Dominion Copper Co., is in the Boundary District trying to buy the Boundary Falls smelter, and that if he fails in that, he will erect another.

Eight thousand dollars was the amount of the fourth clean-up at the stamp mill of the Calumet and British Columbia Gold Mines, Camborne, in the Fish creek camp. This was $3,400 less than the last, due to the fluctuating nature of the quartz. The value of the gold brick sent to the bank was $7,610, and that of the concentrates run through from the ore was $560. There were 900 tons of ore treated, the mill running 690 hours.

* * *

An opinion on the character of the diggings on the new creeks in the Alsek district, 175 miles from White Horse, given by J. E. Peters, a practical mining man who has seen the ground, is worth recording, in view of the anticipated rush to those creeks and activity during the coming season. He says that Bullion, Sheep, Christmas, Ruby and Granite creeks are undoubtedly rich. He reports, however, that they are Summer diggings, and that in all cases where claim owners went down to bed rock when they located, they were driven out by water, and therefore he concludes that pumping plants will have to be put in, or owners will have to co-operate in putting in drainage ditches.

* * *

Nothing can check the rush which may be said to have already begun to the new gold fields of the Alsek district. As usual the American cousin is getting in early in large numbers. The last steamer from Seattle which called in here on Sunday last on her way north had nearly 75 passengers. The Amur when she arrived here from Victoria had over 30 passengers, most of whom had come over from Seattle, and nearly 100 took passage from here. A great percentage of these were local men, but quite a number had come over from the Sound. Of the 200 people who went North on the two steamers, the majority were bound for White Horse, where those who had not taken their outfits with them would outfit for the new diggings. Before the break up of the Northern Winter there will be a big movement from the ports of Puget Sound and British Columbia. Passenger booking for steamers whose sailing dates are billed ahead, have already been heavy. The C. P. R. steamer Princess May, which sails on March 1, has her passenger accommodation already taken up in advance. Shipments of goods North increase and every steamer brings orders for further stocks. The wholesale trade here is doing quite a business in mining supplies.

* * *

The building trade of the city is much exercised over the announcement that

there is to be a combine or selling pool of all the mills in the city to establish a central office for the sale of lumber. All orders for lumber required by the local trade will be given to the central office and from there apportioned to the mills on a basis of capacity and cut. It is claimed by the mill men that this is no combine, but merely a device to reduce cost of office work. The builders say they can see the foreshadowing of a general all-round increase of present lumber prices, and that this is the means which will be adopted to get the trade into line. They say the builders can import from the Sound and save money, and that they will do this if forced to it by any action of the mills. So far, no action has been taken in the matter by either party. The mill men, however, acknowledge that the proposition is on foot.

* * *

"There is not an idle man in the Atlin camp," says a business man from that district. The work of getting out pay gravel has been kept up all Winter, by many of the individual miners. The method is interesting to one not familiar with the difficulties and hardships of mining in the North. It is no all gold getting by any means. With a Winter as severe as it is in the Northwest, the sinking of shafts and drifting in the open are impossible operations. The miners build cabins or houses of logs over the mouth of the shafts which they sink. Down these shafts, when the bed rock is reached and the "pay-streak" located the miners drift either way for the pay gravel. Once hoisted to the surface, it is a matter of choice whether the gravel will be piled up in a "dump" or washed as it is raised.

To wash the gravel in Winter it is necessary to have a long sluice-house in which the sluice-boxes and riffles are placed. This place has to be heated to keep the water and gravel from freezing. Generally speaking, the work of Winter washing is carried on by the smaller claim-owners who have not machinery to work, and find the short Summer season not sufficient for their purposes. They build a long, low log house or shed, at least 36 or 40 feet in length. This is plastered with mud after the interstices between the walls are chinked with moss, and over all is piled earth till the place looks like an immense root-house or cellar. In this stoves are set up to keep the place warm for washing, and the gravel is hoisted and washed, clean-ups occuring at intervals.

This is the method, in brief, adopted by the hardy miners of the North, and the amount of "pioneer" experience and skill acquired in building log houses, cutting wood for fuel, and other equally arduous tasks, certainly takes the glitter off the gold which is won by these hardships in the Winter climate of the North. That men by their own industry and efforts are gaining independent fortunes, of modest proportions, but still independent, is a very good recommendation, not only for the hardy men who are developing this district of Canada, but it speaks well for the camp that such returns are possible. Some of the men are able to put in small steam plants for the hoisting and pumping, and in such cases the work is made much lighter.

Vancouver, Feb. 27, 1904.

IRON AND STEEL HOCKEY LEAGUE

THE last game scheduled of the series was played at the St. Lawrence rink, Point St. Charles, Montreal, on night of Feb. 25. Those who have been following this series expected an interesting game when Thos. Robertson & Co., the league leaders, met Jas. Robertson Co., who have been pressing them hard for first place. They were not disappointed for the game was the most hotly contested of any in the series, and as it resulted in a victory the James Robertson Co., the two teams are now tied for first place. The game was very hotly contested. At half time the score stood 1 to 1, and up to a couple of minutes before the close it was impossible to say who would be the winner. Just before time was called the James Robertson Co. team scored the winning goal. Another game will have to be played to decide the championship. At time of writing the arrangements had not been made.

The opposing teams lined up as follows :

James Robertson Co.:—W. Robertson, goal; J. Furey (captain), point; G. Snowdon, cover; E. Corcoran, rover; W. Quart, centre; A. Massie, right; C. Fagan, left.

Thomas Robertson & Co.: E. Bouchard, goal; W. A. Irving, point; P. Dunberry, cover; H. D. Browne (captain), rover; H. Orsali, centre; J. H. Bedbrooke, right; T. R. Lessard, left.

Umpires : R. Messett and F. G. Mavor.

Timekeepers : W. H. Tait and J. J. Corcoran.

Referee : James McGarr, of the C. P. R. freight offices.

CLERKS' DEPARTMENT

The Ethics of the Subordinate.

CAN one who is in a subordinate position in the business world preserve a high moral standard, in view of the possible failure of moral methods in those who administer the business? It is a very easy thing to say that if a young man employed by a business house finds its methods indirect, dishonest, and untruthful, he may leave his position rather than abandon his moral ideals. Like most things that are easy to say, it is very often hard to do. In the first place, the subordinate belongs, as a rule, to an almost unlimited class of workers.

The average worker has little choice. His necessities compel him to get a living. Conditions of self-respect require that the living shall be honestly made. What is the ethical refuge of employes who may be confronted by these methods, which their moral sense disapproves?

Two or three things must come to pass before the moral relation of employer and employe can be properly adjusted. First, a more intimate knowledge by the trade of a great business of each least detail concerning the well-being of their whole army of industry. The second thing that must come to pass before the moral relations of employer and employe are properly adjusted is the recognition of that law of human nature that all the conditions of life cannot be fulfilled where an insufficient wage is paid for exhausting work. It is not enough to say that people can be got for that remuneration. If the remuneration does not provide a means of decent living, all manner of temptations present themselves to make good the difference.

Old-fashioned self-denial is no longer popular, and the restraint which comes from saving carries with a kind of undefined sense of embarrassment and shame. A little less greed, a little more care, and above all an embracing sense of human brotherhood are the elements which enter into the devising of that plan of business life which shall make the employer the guardian of the employe, and the employe the devoted friend of the employer.

In the nature of things the subordinate can never be other than the man under orders; but his orders may be of a kind that he shall delight to carry out, because they engross not simply his energy but command also the highest offices of his mind. He has the right to expect a dividend on the investment of himself in another man's business; and the lifting of his moral nature to a higher level is not only an ideal, but it is a necessity on which the existence of society depends—Cosmopolitan.

Clerk's Decalogue.

Punctuality—Always be prompt in getting to business.

Personal Appearance — Be careful about your personal appearance.

Tact—When a customer enters step briskly forward with a "glad to see you" smile. Be patient with slow customers, diplomatic with grumblers, respectful and courteous to all. Remember names and faces; customers like to be greeted pleasantly by name.

Accuracy—Cast up customers' invoices with care. Avoid mistakes. When in error apologize promptly and frankly.

Reliability—When you promise to procure or deliver goods by an appointed time, do it.

Knowledge—Be able to give prompt and accurate reply to customers' questions about the origin, different grades of quality and process of manufacture of goods.

Thoroughness—Avoid being slipshod. Let your thoroughness indicate a desire to please.

Progressiveness—Customers welcome information about new goods. Attention skilfully drawn to a novelty means a sale and wins you a reputation for up-to-dateness.

System—Be methodical. Master your work or it will master you. Abhor dirt, keep stock bright. Do not read or write private notes or newspapers during business hours.

Morals—Shun liquors, tobacco and gossip; be honest; be manly; cultivate lofty ideals.

Don'ts For Store Assistants.

Don't encourage your friends to come to the store for social calls. It looks badly and interferes with business.

Don't remain with a house one minute after you discover you are not absolutely loyal. It is an injustice to yourself as well as the house.

Don't complain about slight irritations. They keep you in practice, and when a real contention come up you are much better qualified to handle it.

Don't feel hurt if your employer occasionally fails to act as you advise. It is quite possible you would have his position and salary if your judgment were better.

Don't leave your stock thrown around "any old way." It may look as though you had been busy, but you lose the benefits of "first impressions."

Don't figure you could do better if the goods you sold cost less. You wouldn't do as well, for you would sell them correspondingly less, to say nothing of your own lack of confidence in them.

Don't loaf or visit in the store. It makes a corner grocery out of it. Be busy, if it is only a "bluff."

Don't neglect to meet customers as near the front door as possible. It shows you are willing to wait on them, and that "helps some."

Get the thing done. Keep your eye off the clock. Keep your interest undivided. The new problem will be the more easily tackled when the old one is out of the way.

A meeting of creditors of J. Dupont, general merchant, Valcourt was announced for 1st inst.

PAINT, OIL AND BRUSH TRADES

An Improvement in Trade.

FEBRUARY is reported by several of the wholesale paint firms to have been one of the dullest months in the history of the trade. Orders were fairly generous but the breakdown of transportation prevented both getting and sending out goods, with the result that inaction was the prevailing condition in the wholesale warehouses.

March is opening out more favorably, however. Retailers are starting to ask for the delivery of many lines and, in some cases, are insisting on prompt shipment. During the first half of the week the railways were refusing all classes of freight. But on Thursday freight was taken for many points and the wholesale houses got started on what they hope is the beginning of the Spring movement of paint supplies.

The market seems to have been affected in some degree by this improvement. Turpentine is weak at the South but there is great scarcity here holde : while making a reduction of 2c., are not anxious to make sales. Linseed oil is firmer, the one house which was last week selling below the market ha.. made an advance of 2c. on Satu last, after this paper had gone to pres Shellac is higher and some firms quoting an advance in putty.

An Easy Way to Remove Old Paint.

THERE are several different ways of removing old paint. The up-to-date way is with concentrated lye. It is the easiest, quickest and best way. Most painters know this but there are still some who use the old-fashioned slow methods of doing this work. Hardware dealers can increase their sales of concentrated lye very materially by calling the attention of their paint customers to this useful article. The following directions show how to use it for this purpose: Dissolve contents of a can of Gillett's Perfumed 100 per cent. Lye in one gallon of water; apply this strong solution to the paint with an old scrubbing brush; leave it to soak in for a few hours, then wash off and apply solution again. In way five or six coats of the oldest an hardest paint can be removed in a few hours without any trouble in scraping or scouring. If it is required only to clean and wash the paint one or two teaspoonsful to the gallon of water will be quite sufficient.

An Appreciation.

It is ever pleasant to have one's work appreciated. The Canada Paint Co made such a strong exhibit at the painters' convention that a good photograph of it made an excellent showing. The company now write expressing their high appreciation of the photograph and of the remarks which appeared in Hardware and Metal in relation thereto. We shall ever strive to merit such good opinions from all our clients.

Paint and Prosperity.

THERE is an advantage in keeping the store bright, clean and up-to-date, besides the obvious one of rendering the establishment more attractive to the public; and this is that every improvement made is an evidence of prosperity. A leading Winnipeg tobacconist is so well aware of this that he has his building front painted more frequently than is absolutely necessary. "How is it you are always painting your building? It does not need it," was the remark of a friend. "I am aware of that," replied the merchant, "but it makes us look prosperous to have work of this kind going on, and on that ground alone it is a good investment."—Cigar and Tobacco Journal.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 3, 1904.

THIS week we have to note an advance of 2 cents per gallon in linseed oil because of higher prices asked by Canadian crushers and in sympathy with the firmer quotations in Great Britain. Turpentine is reported weaker in primary markets but quotations are still being maintained by the local houses. Competition in white lead continues strong and our quotations are still nominal. It is impossible to quote with exactitude. The general price seems to be about $4.50, but lower prices are sometimes obtainable.

Orders continue to come in freely for general lines of painting material but shipments are still of a straggling type. The heavy snowfall which is reported to have extended from Detroit to St. John, N.B., has again made the railroads chary of accepting goods. It is said that some factories throughout the province are idle owing to a lack of coal. It will be readily understood that these conditions tend to check the volume of trade very materially. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 49c.; 5 to 9 barrels, 48c.; boiled, 1 to 4 barrels, 52c.; 5 to 9 barrels, 51c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Turpentine—Single barrels, 93 1-2c.; 2 to 4 barrels, 92 1-2c. Standard gallon of 8.6 pounds.

Benzine.—25 to 26c.

Shellac Varnish.—Pure white, $2.60 to $2.80; pure orange, $2.60 to $2.80; No. 1 orange shellac, $2.35 to $2.50.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green.—50 and 100 lb. drums, 15c. per lb.; 25 lb. drums, 15 1-2c; 1-lb. paper boxes, 16c.; 1-lb. tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, March 4, 1904.

A few enquiries for immediate delivery are reported, and a somewhat stronger tone is shown on the market, except in turpentine, which shows a decline of 2c. The market in the South is quite weak but stocks locally are light, two cars destined for this market having been held up for some time. Linseed oil is firm, one firm which was selling below the market last week having made an advance of 2c., which advance went into effect immediately after this paper went to press. Putty and shellac are higher. We quote:

White Lead—Ex-Toronto, pure white lead, $4.50 to $4.65; No. 1, $4.05 to $4.20; No. 2, $3.75 to $3.90; No. 3, $3.35 to $3.50; No. 4, $3.25 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine, in casks of 560 lb., $4.25; ditto, in kegs of 100 lb., $4.50; No. 1, in casks of 560 lb. $3.75. to $4; ditto, in kegs of 100 lb., $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75c.

Send us a post card and let us tell you all about it.

"BRUNSWICK" ASPHALTMASTIC AND BITUMEN

THE PROPRIETOR'S STORY.

ALABASTINE we have been selling nigh on to twenty years, and know it to be reliable.

We dealers also know that Alabastine is what is in demand, and that to sell anything else for coating walls, we would have to do so on the recomendation that it was the same thing, or just as good as **ALABASTINE.** Would not offer a substitue when Alabastine is called for; no necessity to do that, as it is easier to sell Alabastine, and in handling it we do not incur any risk on account of infringement of patents.

Alabastine is ready for use by the addition of Cold Water, made so by the inventor, Mr. M. B. Church, who was the first to produce a cold water preparation that is thoroughly practical, that has superseded all hot water mixtures, and forced other manufacturers to **UNDERTAKE** the use of the cold water process. Then, again, Alabastine is made in Canada, by Canadian labor and from Canadian materials. It satisfies my customers.

The trade supplied by Wholesale Hardware and Paint Dealers. Also by

Prices are unchanged. We quote: First break, 50 feet, $1.70; second break, $1.80 for 50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

WALL PAPER

Wall Paper Display Fixtures.

IN examining his display fixtures, the merchant should direct his attention to the very best methods obtainable. The window is the best advertisement and certain fixtures will be required. Very many use the simple stands, from which the unrolled portion of the roll depends, the roll itself being concealed behind. This is simplicity itself, and it may be said that the best methods of displaying wall paper are those which are simple. Wall paper must hang straight, just as it is seen on the walls; fancy displays are useless and inartistic.

If enough business is done to warrant a small expense, there is a structure that can be built for window display purposes, that can be excelled by nothing. It is in reality a section of a

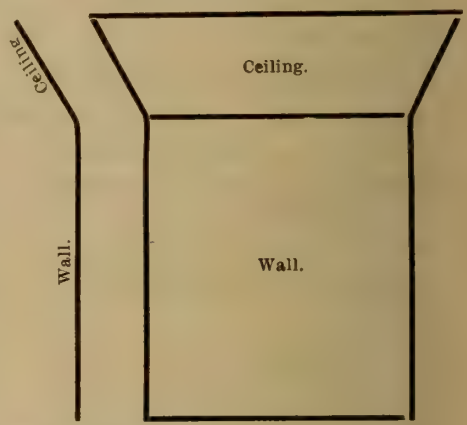

Figure 1. Figure 2.

room showing the walls with its paper and freize in position, and above it the ceiling with the suitable paper.

Figure one shows a side view of the structure which is made of a framework covered tightly with cotton. On this is pasted a lining paper, and over it the papers to be shown. The ceiling slants off at an angle that gives the proper effect, and can be distinctly seen from the front. Figure two is a front view of the same fixture. If the window is large a couple of these might be built in. Of course they should be constructed so that they will do year after year. On the same plan foundations can be built for a display of panel work. This style of wall decoration is too little brought before the public, and such a scheme is almost necessary and will be sure to sell where a description would be inadequate.

WALL PAPER

MOIRE SILKS--

are very popular this season. For Wall and Ceiling panelling they are particularly attractive. We have several excellent designs in a variety of colorings. You should have an assortment in stock. Samples mailed on request.

STOVES AND TINWARE.

Pinholes in Tin Plates.

A CORRESPONDENT in the Metal Worker, replying to an enquiry in regard to pinholes in barber's kettles, made in IX tin, says: "If enquirer would make the kettle entirely of tin and without a copper bottom, he will find no difficulty from pin holes. Copper and tin, in my experience, do not get along well together. The copper has the effect of destroying the tin in spots near the point where they join. A kettle made entirely of tin or entirely of copper will last much longer than a kettle having a tin body and a copper bottom. Every old tinsmith is aware of this fact, and seldom unites the two metals. In early days most of the washboilers were made of copper, and later, owing to the heating qualities of the copper, copper bottoms were put on tin boilers, the idea of using tin in the body being to reduce the cost. Experience with such boilers was that they were a continual source of profit to the tinsmith, after they had been in use for a short time, as the chemical action between the copper and the tin would cause little holes in the tin all around the bottom of the boiler. In consequence, after each washday, the washboiler would be brought to the tin shop to be soldered up and prove a source of profit to the boss. Increased durability can be provided in kettles made entirely of tin, by using IXX tin for the bottom, when IX tin is used for the sides, or still heavier tin if need be, to stand the wear. Some time ago I read in a paper that a tinsmith who had to join a copper roof with tin flashings, used oil paper between the two metals, to prevent contact and the chemical or electrical action which results in the destruction of the tin. Water from a copper conductor pipe discharging on a tin roof will soon carry enough copper with to result in the tin rusting out at the point where the water plays upon it. Every experienced tinsmith recognizes the fact that copper is the enemy of tin plates and is very careful how he brings the two in contact with each other in his work.

The Stove Department.

"THE stove department in the hardware business does not," insists a retailer in an exchange, "pay a cent of profit to the average dealer, though it certainly should. A stock of stoves runs into money, and large expense is incurred in handling them, and how often sales are made at 10 per cent. margin when the actual expense is more. In my opinion a stove should never be sold at less than 25 per cent. margin, and the custom of throwing in this and that article should be stopped.

"Bazaar, department and dry goods stores do not usually handle stoves because of the investment and labor involved. They want us to handle all the undesirable lines and they pirate upon our shelf and case goods, where the investment and labor are less and the profits more. Do you not think we should stand with our neighbor hardwareman in maintaining satisfactory prices on all these goods which we only keep, thus enabling us to meet their price cutting on shelf and other goods? How often we pay a man $10 per week to black and set up stoves, and our charge for doing so is so small that the dry goods clerk, getting $5 per week, feels he cannot afford to soil his hands in blacking a stove when he can get the hardwareman to do it for perhaps the cost of the blacking material. I speak of this to illustrate the many things we do at a less margin than we can afford to, and no one to blame but ourselves, competition not forcing us to do so—simply one hardwareman cutting the other's throat, and the chickens always come home to roost."

TAKING LARGER PREMISES.

The Canada Cycle & Motor Co., Toronto Junction, have leased the premises which until recently were occupied by John Dixon, carriage maker, Bay street, Toronto. These premises will be fitted up as a show room for automobiles and bicycles, as well as for the repair and storage of automobiles.

The King street premises which the Canada Cycle & Motor Co. have occupied for some time will be discontinued as the premises now secured are considerably larger, giving more room for all purposes intended.

HEATING AND PLUMBING

Frozen Service Pipes.

THE severity of the present Winter has impressed itself upon everybody, but particularly upon the plumbers and water works departments in the cities, says the Metal Worker. The plumbers have had plenty of difficult repair work under very trying conditions of exposure in different parts of buildings, and have been very generally called upon to thaw out service pipes bringing the water from the street mains into buildings. Extremely cold weather has continued for exceptionally long periods, with the result that the frost has extended much further down into the ground than is the case in the ordinary Winter. In consequence, during the night, when little or no water is running through the service pipes, the frost, in many cases, has filled the pipes with ice and stopped the water supply of houses. The work of thawing these service pipes has often been made much more difficult by the absence of suitable stop cocks or fittings, that where they afford easy access to the interior of the pipe. In some buildings no stop cock whatever is provided, making it necessary to cut the pipe open in order to insert the steam pipes, when thawing is done by steam. This is a custom widely practiced by plumbers who possess special thawing steamers, while others manufacture steamers to use in connection with their gasoline fire pots, the steam being forced into the frozen pipes by means of a small tin or lead pipe, which is pushed forward as the steam melts the ice in front of it until the service pipe is open. While this is quite a common practice, electricians in some cities have devised means for using electricity in thawing out the service pipes without any disarrangement of the plumbing system. A well insulated wire is carried from the trolley wires to some faucet in the building in which the water supply is shut off by ice in the service pipe, and another connection is made with some fire plug nearby, in order to complete the circuit. A special device is used between the trolley wire and the house faucet to reduce or transform the electric current to the power required to thaw out the pipe without doing damage to it. These electrical devices have been employed in several places with very satisfactory results, so far as the removal of the ice is concerned. Whether or not they have had any destructive effect upon the pipes has not yet been disclosed. Probably some time must elapse before such will become manifest or the harmlessness of the process be proved.

——

Acetylene Ether for Welding.

THE process of welding metals by using a blow-pipe or burner with acetylene as a heating agent has been developed by the Company of Dissolved Acetylene, of Paris, according to the Revue Industrielle, of that city. Heretofore a chief difficulty met has been to regulate the proportions of oxygen and acetylene; for, according to the relative quantities of these gases, an oxidizing or reducing effect is produced. It is announced that experiments with a mixture of acetylene and ether vapor have been successful. The acetylene is made to absorb vapor from the ether, thus obviating cocks to regulate the supply of each gas. A green flame as small as a pencil point is produced. The statement is made that the heat obtained exceeds that of the electric arc, which may be doubted. But at any rate, this flame is said to be unsuited for optical projection instruments since it quickly melts even refractory substances. It makes a hole in a bar of iron in a few seconds. It is easy to perceive that iron plates may by this process be welded in a minute. First a file is passed over the edges to be joined; then you weld a point at the middle and two others at the ends of the line of contact, and finally pass the flame along this line. With thick plates the edges are filed in a particular shape and then a bar of iron melted by the flame is passed along them to act like solder. The new method is successful with wrought iron and steel, but not thus far with cast iron.

——

Building Permits Issued.

TORONTO.

F. George, three storey brick dwelling on McKenzie Crescent, near Dovercourt Road, to cost $1,900.

A. Davidge and B. Pears, pair of semi-detached two storey brick dwellings on Pears avenue, near Avenue road, to cost $2,200.

J. H. Hamlyn, two pairs of semi-detached two storey brick dwellings on Dovercourt road, to cost $4,000.

The Gutta Percha & Rubber Co., a one storey cold storage bunk on the C. P. R. siding, to cost $8,400.

F. Hillock, two two storey and attic brick dwellings on south side Simpson avenue, near Broadview avenue, and on north side Simpson avenue, near Broadview avenue, respectively, to cost $2,200 each.

T. McIlwain, two storey brick and stone detached dwelling at 75 Sorauren avenue, to cost $2,500.

Mrs. Barrett, four attached brick stores and dwellings, three stories high, on Queen street East, near Saulter street, to cost $9,000.

Plumbing and Heating Notes.

On February 24 the James Morrison Brass Mfg. Co., Toronto, defeated H. S. Howland, Sons & Co., at hockey, the score being 4—0.

Toronto architects report that business is slack, but that they are looking forward to an improvement in present building conditions with the opening of the Spring season.

The executive committee of the Toronto Master Plumbers' Association, which is considering at the present time the demand for higher wages made by the "Journeymen," have postponed further consideration until the next regular meeting of the Master Plumbers, to be held March 15. As a result, plumbing contracts are being held back until the price to be paid for labor is fixed.

The Ontario Provincial Association of Master Plumbers, Steam, Gas and Hot-water Fitters, established a local branch of the association at Sault Ste. Marie, Ont., during the month of February, 1904. The officers appointed for the current year are as follows :

G. Woolrich, president.
C. Beck, treasurer.
J. E. Farrel, secretary.

W. Mansell, president, and W. H. Meredith, secretary, of the Provincial Association of Master Plumbers, have issued an official invitation to every member of the association and every master plumber in Ontario, to attend their annual convention, to be held on April 1, in Hamilton. The invitation

includes a brief resume of all matters of interest to the plumbing trade which are to be discussed at the coming convention.

Building Notes.

Isaac Robertson, Melvern, Ont., will erect four new houses in Scarboro.

A new Roman Catholic church is to be erected in Windsor at a cost of $30,000.

Tenders are being called by E. T. Tyrer for the erection of a new police court, council chamber, etc., at Barrie, Ont.

W. A. Elliott, architect, Brandon, Man., has plans ready for a Baptist church in Brandon, to seat 800 and to cost $25,000.

C. Thompson & Co., Glace Bay, N. S., suffered loss estimated at $6,000 to their stock of heavy hardware and of $1,200 to their warehouse.

The erection of the main building of the new Ottawa University will commence as soon as Spring opens. This building alone will cost about $125,000.

Darling & Pearson, architects, Toronto, have prepared plans for the new physics and forestry building to be erected by the University of Toronto, which is to have a frontage of 175 feet, and to cost $175,000.

The Manitoba Construction Company have secured the contract for the erection of a large warehouse on Fort street for the C. R. Steel Furniture Co., Winnipeg. The new block will be erected just behind the Steel Company's present stand on Main street. It is said that the block will cost in the neighborhood of $35,000.

The plans have been completed for the new Victoria Museum in Ottawa. It will be an imposing building, longer than the Langevin block, and will have a tower 200 feet high.

MEETING OF WHOLESALE HARDWARE ASSOCIATION.

A regular meeting of the Canadian Wholesale Hardware Association was held in Montreal, on Monday, February 25. There was a large attendance of members from the West and all the Montreal houses, members of the association, were represented at the meeting. President F. O. Lewis, of Lewis Bros. & Co., presided.

The principal topic of discussion was the situation in wire and rope. It was decided to make no change in wire, but sisal and Manila rope have been advanced one-half cent per lb. Different members of the association expressed to Hardware and Metal their confident belief that 1901 will be a prosperous year in the hardware trade, but all regretted the tie-up of business caused by the freight blockades.

TO VISIT THE MARITIME PROVINCES.

W. P. Robinson was a welcome caller this week at the Montreal office of Hardware and Metal. Mr. Robinson has recently been appointed representative of the Wilcox Mfg. Co., London, Ontario, the Chicago Hardware Co., and selling agents for Lawson's matchless door spring hinges. He is visiting the trade in Montreal and as his territory comprises the Provinces of Quebec, New Brunswick and Nova Scotia he will probably locate permanently in that city. Within a fortnight Mr. Robinson intends visiting the hardware trade of the Maritime Provinces and as he is a thoroughly good fellow representing reliable houses we bespeak for him a good reception from our numerous Maritime readers.

BUILDING AND CONTRACTING NOTES

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

E. VANALLEN & CO., Hamilton, Ont., have been incorporated with a capital of $100,000, to manufacture and deal in dress fabrics, and for that purpose to take over the business of E. VanAllen & Co., Hamilton. The directors are: E. VanAllen, William Southam, C. S. Scott, and G. Lynch-Staunton, all of Hamilton.

The Enoch James Roofing Co., Limited, Montreal, have been incorporated with a capital of $50,000, to carry on a general business as roofers, sheet metal workers and manufacturers of the James' Patent Roofing. The directors are: E. James, G. F. Ross, J. J. Jackson, E. C. Gerth, and C. A. Barnard, all of Montreal.

The works of the Menzie Manufacturing Co., Toronto, have been damaged by fire for the third time in three years. The warehouse, shipping room and finishing rooms were burned, but the paint department and the main factory escaped injury. The loss is given out to be $30,000, partially covered by insurance in 25 different companies.

W. H. Wilson Co., Limited, Tillsonburg, Ont., have been incorporated with a capital of $40,000, to manufacture and deal in grocery sundries and supplies. The directors are: G. H. Buckrell, W. H. Wilson, both of township of South Norwich, Oxford; O. E. Robinson, Ingersoll, Ont.; J. G. Pearce, Township of Derehaur, Oxford, and J. E. Weston, Tillsonburg, Ont.

The Walthausen Hat Manufacturing Co., of Norwalk, Conn., say that if the town of Cornwall, Ont., will grant them a bonus of $20,000, a free site within the town limits and exemption from taxation for 20 years, they will install plant and machinery in the town to cost $50,000, and will employ 150 hands. The town is not asked to advance the bonus until the company has $100,000 stock subscribed and actually paid up.

In a commercial report to the Department on Trade & Commerce, Mr. Poindron, of Paris, says that there is a market for Canadian corundrum in France. He quotes an official statement to the effect that if Canada would reciprocate by reducing the duty on a certain article not now included in the French treaty, the French Parliament might be persuaded to admit Canadian corundum into France as crushed emery, at $8 per ton.

It is now generally conceded that zinc mining in British Columbia may assume large proportions. It is a new industry, and has only lately been one of sufficient importance to deserve attention. The two markets are United States and Europe, and the high freight rates consumed a considerable amount of the profits. However, the action of the C. P. R. in reducing the rates from $16 to $13 a ton has overcome, to some extent, this grievance.

Notes.

The Winnipeg Safe Works have commenced operations. They will manufacture all kinds of safes and doors.

The Bennett Mfg Co., Pickering, Ont., have completed the installation of the new engine and boiler, and are endeavoring to catch up on their orders.

The Tip Top copper mine proposes to build a 75 ton smelter at Fort William, and asks from the town a free site and exemption from taxation for ten years.

The Aylmer Cement Co. are offering to the Agricultural Society of the Ottawa Valley holding the best fair in 1904 a secretary's office built of cement and valued at $1,000.

The Ottawa Lumber Co. have purchased the mill property of J. & T. Gillies, in Arnprior, for the sum of $20,000. The sawing capacity of the mill is about 60,000 feet per day.

Craig Mining Co., incorporated in Dakota, U. S. A., have been granted a license to carry on in Ontario the operations of mining, provided that in so doing the company shall not use a larger capital than the sum of $50,000.

The financial statement presented at the annual meeting of the War Eagle Consolidated Mining & Development Co., Limited, held in Toronto recently, showed assets of $2,095,216.64, and liabilities of $2,373,191.56, leaving a net loss of $278,274.92.

The Elite Costume Co., Limited, Montreal, have been incorporated with a capital of $40,000, to manufacture and deal in ladies' skirts and outer garments. The directors are: H. Werner, S. Wener, Z. Wener, A. R. Oughteed, and T. Tobias, all of Montreal.

Securities Holding Co., Limited, Toronto, have been incorporated with a capital of $645,000, to carry on business as dealers in stocks, bonds, and other securities. The directors are: A. E. Ames, E. D. Fraser, and H. R. Tudhope, all of Toronto.

The Macdonell Construction Co., Montreal, have been incorporated with a capital of $500,000, to contract for and undertake all kinds of public and private works. The directors are: N. G. Guthrie, C. Pringle, C. S. Cameron and H. A. Burbridge, all of Ottawa.

The Helen Shipping Co., Limited, Yarmouth, N. S., have been incorporated with a capital of $12,000, to purchase and navigate the schooner Helen. The directors are: B. Davis, F. L. Davis, S. B. Davis, S. B. Robbins, and C. B. Villman, all of Yarmount.

The Brantford Hosiery Co., Limited, Brantford, Ont., have been incorporated with a capital of $75,000, to manufacture and carry on a wholesale and retail business in knitted hosiery and underwear. The directors are: F. Cockshutt, R. J. Strauss and J. H. Hines, all of Brantford.

MUNDERLOH & CO.

Attention is directed to the advertisement of the above firm and also to the notice of their catalogue which appears in this issue. Ever since their establishment, Munderloh & Co. have been in the front rank of electrical houses of Canada with superior lines of electrical fixtures and supplies at prices which have secured for them a good proportion of the business which formerly went to the United States. During the last year or two they have largely increased their staff and have greatly extended their business. They are now supplying a good proportion of the electrical fixtures, sockets, rosettes, etc., used throughout Canada.

During the last year or two the number of Canadian hardware men who have ordered a supply of electrical fixtures to their regular stock has been very considerable. There is no more profitable line for a hardware man to handle and any of our readers who are contemplating the addition of this line should communicate with Munderloh & Co. They can give them valuable pointers.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE : Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face*, *strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our cafe 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

Its Crowning Feature.

The Crowning Feature
—of—
The Peerless Iceland

is its simple, yet effective, **one motion**, which not only produces rich, velvety ice cream, but does in the shortest time and with the least possible amount of ice and labor.

Simple in construction

Wonderful in results

No gearing on can top.

Peerless Iceland Freezers

embody all the best and most advanced ideas in practical freezer making. They are built to last,—not to fall to pieces after a season's use.

The demand for Peerless Icelands will be great.

MONTHLY BANQUET OF CANADIAN MANUFACTURERS' ASSOCIATION

THERE was a swing and an enthusiasm about the banquet of the Canadian Manufacturers' Association, held at the Chateau Frontenac, Quebec, last Saturday night, which rendered the occasion a memorable one to all who had the pleasure of being present. The "Ancient Capital" has always been noted for the hospitality of her citizens and to say that the banquet was held in Quebec implies at once that the visitors from the West were accorded a royal reception. The speaking was of a high order of merit, and the assurances given the association by Honorables Fitzpatrick and Prefontaine of the sympathy of the Government with their aims were greeted with loud applause. F. D. Monk who delivered a most eloquent and effective speech, worthily represented the attitude of the Opposition towards the association and its fiscal aims.

A jolly party of manufacturers left the Place Viger station, Montreal, at 2 p. m., Saturday. They were the last arrivals, as many others from the West were found at the Chateau on their arrival.

The banquet was held in one of the spacious banqueting halls of the famous Chateau. It was gaily decorated with Union Jacks, but perhaps the feature of the decorations which caught the eyes of most was a picture of two hands clasped with the inscription, "The grip and pass-word of a true Canadian—'Made in Canada.'" "Made in Canada" was in truth the key note of the speeches of the evening.

The Menu.

The menu cards were handsomely designed, the cover being ornamented with a maple leaf and below it once again the words "Made in Canada." The menu was a sumptuous one as may be judged from what follows :

Russian Caviare on Toast

Oloroso

Consomme a la Doria

Fillet of Sole a la Marguery

Sauterne — Pommes Noisettes

Graves — Vol-an-Vent a la Monglas

Club Claret — Boiled Turkey, Cranberry Sauce

Oyster Plant Fritters

Brussel Sprout

Mashed Potatoes

Punch au Rum

Moet and Chandon

Hunch of Moose Venison

Sauce Grand Veneur

Fruit Jelly

Bombe Glacee au Chocolat

Petits Fours

Liqueurs — Dessert — Cafe Noir

When ample justice had been done to the array of good things just mentioned, Geo. E. Amyot, chairman of the Quebec branch, who presided, rose to make some announcements. He was greeted with a storm of applause which left no doubt of his popularity with his fellow manufacturers. He called on Secretary R. J. Younge to read some letters and telegrams. Mr. Younge announced the receipt of letters and telegrams of regret from Sir Wilfrid Laurier, R. L. Borden, Sir Charles Ross, Hon. J. C. McCorkill, Geo. E. Drummond, and W K. George.

The King.

Mr. Amyot then rose to propose the toast of the King, and in doing so took occasion to address a few words of welcome to the visitors to Quebec. He was a man of few words (cries of hear! hear! and oh! oh!), but the inspiration of such a large gathering might move any man to eloquence. The government and parliament of the country, the civic authorities and the great industrial interests of the country were here represented. The visitors had come at a time of frigidity in which Quebec excelled as in all things else.

When the toast of the King had been duly honored, Mr. Amyot called on Secretary R. J. Younge, of Toronto, in the unavoidable absence of President Geo. E. Drummond owing to illness which was much regretted, to propose the toast of

Canada and The Empire.

Mr. Younge on rising was given an enthusiastic reception. He regretted sincerely the absence of Mr. Drummond and hesitated to reply to this important toast. He wished in the first place to congratulate the Quebec members on the success of the banquet. In the whole history of the association no more successful banquet had ever been held. Special thanks were due to Mr. Amyot, who was recognized as a tower of strength in the association.

Canada and the Empire ! How fitting that Canada and Great Britain should stand together, young Canada with her infinite possibilities and Great Britain with her historic associations and reputation for right and justice.

In referring to the work of the association Mr. Younge pointed out that the organization had by its various committees, its department of commercial intelligence, etc., justified its existence.

The tariff is a side issue but it receives attention. The position of the Manufacturers' Association is well known. It is the national business standpoint. It is the policy which will keep our country for Canadians. (Cheers). The most regretful circumstance in all our past history is not the loss of our sons on the field of battle or the loss of territory in boundary awards —it is that a million and a half of Canadians are in the service of our competitors across the line.

Hon. Chas. Fitzpatrick.

Hon. Chas. Fitzpatrick, M. P., Minister of Justice, on rising to respond was accorded a flattering reception. Few subjects, he said, had been more universally treated than "Canada and the Empire." He wished to echo what the chairman had said in praise of old Quebec. He had been born in this historic city inseparably connected with the romance and history of Canada.

What should he say of the resources of the country ? In the East, iron ore and coal lie side by side; in the West and Northwest, riches beyond the dreams of avarice requiring only the hand of labor to gather them. And in spite of the chairman's reference to a time of frigidity, we have the most favored climate in the world.

It is a commonplace in economics that commercial supremacy depends on the amount of mechanical force which a country possesses. England's coal and iron had been the basis of her supremacy won in earlier years. To-day coal is giving place to a greater power than even the writer of the Arabian Nights ever dreamt of. We in Canada can command boundless electrical power which is now becoming the controlling factor. Hundreds of rivers are now running idle to the sea and when once she has harnessed them Canada will enter the struggle for manufacturing supremacy backed by a power which will give her an immense advantage over the whole world.

The speaker quoted figures to show the growth of Canada's foreign trade. The showing was satisfactory. We have come to the front and we mean to stay there.

There are United States politicians who hope to keep us tied to their country commercially. But Quebec, Montreal and Toronto must not be allowed to become the distributing points for United States products; nor must Canada be allowed to become the dumping ground of American goods. (Loud cheers). The speaker disclaimed the ability to speak eloquently of free trade or protection. But his eyes are open to changing conditions and it is not right to say that the thing which has been must be. We must always adapt our policy to changing circumstances.

We must remember how much the manufacturers have invested in their industries. Canada is intended for the Canadians. He had no desire to raise a Chinese wall around Canada, but if a coping stone is needed to prevent dumping he, for his part, was in favor of adding it.

Reverting to the toast of Canada and the Empire, Mr. Fitzpatrick said it would be a crime to desire any change in the political relations in the Empire. "No change can take place by which we would benefit; no change can take place by which we would not lose."

He was glad of an opportunity of meeting so many Canadian manufacturers. The manufacturers are doing a public service of importance in giving the government advice. The government must learn from business men.

F. D. Monk.

Mr. Monk was accorded a reception which left no doubt of his popularity and which must have been very gratifying to him. He said it was always a pleasure to him to come to Quebec. He felt he would have failed in his duty if he had not come to this demonstration in honor of the most important business organization in Canada. It might seem strange that a gathering of practical business men should meet in this city of historic associations, but after all it was a fitting tribute to the importance of the industries of the "Ancient Capital." The toast was an important and patriotic one. The man who has not seen Canada can not properly appreciate the mission of the Manufacturers' Associations. We learn far too little of our own country from our early education. He had seen enough of the natural resources of the older provinces to know that we have a magnificent inheritance. We must keep that untold treasure for Canadians. And then when we see the great West beyond, acquired by men who saw farther into the future than their fellows, we can understand the patriotic duty of the manufacturer. He himself had seen the great West with the amazement of the child who first stands before the ocean. In area the West is an Empire in itself—the manufacturer and business man must play an important part in developing that Empire. Statesmen must recognize the justice of the manufacturers' claims.

"There is an impression abroad in some quarters that you are looking only for your own interests. But that must be corrected. Your aim is not a narrow one. You are intent on building up the country and you are entitled to the greatest consideration."

He knew that the country had prospered during the past few years, but when England is reconsidering her position does it not behoove us in the face of the hostility of other nations to look to ourselves? On the principle of "Canada for the Canadians" is it not our duty to shape our conduct and arrange our tariffs so that we shall not suffer from the rivalry of other nations intent on protecting themselves?

None of us want a Chinese wall, as the Minister of Justice has said. But if we are agreed on the principle at stake is it not the case that the best men to give the government information are the manufacturers? "Admitting the necessity of tariffs in the face of foreign hostility, I for one would be ready to support the creation of a commission which would communicate with your association and give effect to principles on which we are agreed giving our industries the protection which those of the United States receive."

In all our banquets now a place is found for the toast to Canada. With the name of Canada is coupled that of the Empire. There was no man born under the British flag who would not cordially drink the toast of the Empire. We talk of the vast extent of the Empire upon which the sun never sets, but whatever may be the fate of England it will be said of her that she has given birth to such dependencies as Canada and Australia, and has endowed them with that glorious freedom which is the birthright of every citizen of the Empire. No other nation could make such a boast.

There was no more interesting spectacle than the great discussion in England of the fiscal question and the relations of the different parts of the Empire. The speaker's mind and heart was an open one with respect to any new relations which might be the outcome of the present discussion. We are happy now and, thanks to the liberty which England has given us, we must be left free to examine those proposals whatever they may be. He entertained no doubt but that with the spirit of liberty which animates the Empire the examination of those proposals would result in the good of all concerned. (Long continued applause).

The City of Quebec.

Mr. Amyot then called upon C. C. Ballantyne, chairman of the Montreal branch, to propose the toast of the City of Quebec, coupling with it the names of Mayor Parent and W. A. Marsh.

C. C. Ballantyne.

Mr. Ballantyne said it was always a pleasure for him and other members of Montreal branch to visit Quebec. The city was quite familiar to him. He first visited it 12 years ago and he knew no city which had made the same progress. At that time there were no electric cars, there was no Chateau Frontenac, the streets were not paved. It is largely owing to the efforts of Mayor Parent that this city has made greater progress than any other in Canada. Mr. Parent was the best mayor in Canada. Also premier of the province, he has taken a wide interest in public affairs. His example was an inspiration to all business men for the speaker understood that he invariably starts work at 8 o'clock in the morning.

He would not refer to the past history of Quebec. That aspect had been dealt with by previous speakers. The city should be proud of her sons Fitzpatrick and Parent.

The Minister of Justice had said that Quebec was noted for her vegetables, but the speaker wanted to add that it is noted for the most charming ladies of Canada. ("Hear and Hear," and cries of dissent. "What about Toronto?" "What about Montreal?")

Mayor Parent.

When the toast had been duly honored Mayor Parent on rising received the ovation of the evening. "Napoleon," as his admirers fondly call him, is a favorite in Quebec.

He said that he appreciated very much the honor of responding to this toast. Mr. Ballantyne's remarks were especially gratifying because he came from Montreal. But he could not claim so large

WIRE NAILS
TACKS
WIRE

Prompt Shipment

The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

a personal share of the credit for the progress of the city; much was due to the loyal support of his colleagues in the council.

The interchange of ideas at such gatherings must facilitate business intercourse. In the Province of Quebec business men are willing and ready to profit from suggestions.

After welcoming the visitors to Quebec Mr. Parent told some interesting stories of business in Quebec in the 17th and 18th centuries, when the manufacturers were accorded a protection that was absolute prohibition of imports. Any person found with an artice of foreign manufacture was fined. Vessels carrying foreign goods to Quebec were confiscated. The merchants of Montreal were allowed to buy only from those of Quebec. He took it that the manufacturers of to-day were asking nothing unreasonable.

Mayor Parent was given another ovation at the conclusion of his speech.

W. A. Marsh.

Mr. Marsh said there were three reasons why he had little to say. The first was his innate modesty, the second was the fact that he is a manufacturer and not an orator, the third was that "there were others." "If you have enjoyed your visit to Quebec as I have enjoyed your company, that banquet has been a success. If the assurances of the politicians mean anything, we manufacturers can stop talking and go to work."

Canadian Industries and Commerce.

Mr. Amyot then called upon Hon. J. D. Rolland to propose the toast of "Canadian Industries and Commerce," coupling with it the names of Alderman Sadler, Montreal, and Hon. Raymond Prefontaine.

H. J. D. Rolland.

Hon. Mr. Rolland spoke briefly in French, the keynote of his address being "Canada for the Canadians." He referred to the motto on the wall—"The grip and password of a true Canadian, 'Made in Canada.' "

Alderman Sadler.

Alderman Sadler said he had enjoyed the banquet but would have enjoyed it more if he had not been requested to take the place of Col. Burnham. He would not go back 200 years, as Mayor Parent had done, but he would compare 1891 with 1904. In 1891 the manufacturers of Canada had invested between four and five hundred millions in the industries of this country, whereas now their investments are between eight and nine hundred millions. When such large amounts are at stake, the interests of the manufacturers demand careful attention. He agreed with Mr. Monk that a commission was desirable to arrange the tariff. Half of our imports are manufactured products and three-quarters of these goods come from the United States. A commission might find how much of those goods we can manufacture in Canada.

Hon. Raymond Prefontaine.

Mr. Prefontaine spoke briefly in French. He dwelt upon the necessity of building up and fostering Canadian industries and declared amid applause that the manufacturers are undertaking a patriotic duty. He spoke of the possibilities of the St. Lawrenre route and of the growing trade of Canadian ports. The exodus of young Canadians to the United States was being stopped. He declared himself unreservedly in favor of protection to Canadain industries.

The Chairman.

This was the last toast on the program, but before the applause had died away Robert Crean was on his feet to propose the health of Chairman Amyot. The growing membership in Quebec City was largely due to the efforts of Mr. Amyot.

He wished to impress upon the members of the Government that the Manufacturers' Association commenced a few years ago with a membership of 130, which has since grown to 1,500. During the last year, new members have been added at the rate of 25 to 50 per month. It was the aim of the association to make its membership so influential that it could approach the Government with confidence. "When you eat sausages, gentlemen, all that you want is confidence."

Louis Breithaupt.

Mr. Breithaupt said he had come 600 miles from Berlin to attend this banquet. It was always a pleasure to him to come to Quebec, a city noted for its hospitality. He had been interested in the speeches of the politicians who, as usual, "talked around the stump."

He spoke of the industries of Berlin, which sends out 100 travellers. From Limburger cheese to lager beer, everything was manufactured in Berlin.

"We are here representing both sides of politics, but we are agreed on a policy although we are not sure what to call it. I am not sure whether it is "adequate protection," or some other kind, but we want enough of it to keep Canada for the Canadians."

The speaker closed with a word for the ladies of the West, next to whom the ladies of Quebec are undoubtedly the best.

Mr. Amyot briefly thanked the manufacturers for coming to Quebec. He hoped that the annual meeting might soon be held in Quebec.

The gathering then dispersed to the tune of "God Save the King."

Business Changes

ONTARIO.

THE petition of the St. Thomas Car Wheel Co., St. Thomas, for winding-up order, has been granted.

W. S. Hughes, general merchant, Winchester, is dead.

MACHINERY

THE MACHINERY MARKET.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 10, 1904.

THE chief topic of conversation in local machinery circles is the absorption of the Locomotive and Machine Company by the American Locomotive Company. The merging of these two companies was foreshadowed in our last issue. From time to time references have been made to the financial difficulties of the Locomotive and Machine Company. The energetic group of capitalists who backed the scheme erected in an incredibly short space of time one of the most complete plants in existence. When all was completed they found that their enterprise had been too ambitious for their capital and they were unable to commence active operations. It became evident that if the enterprise were to be made a sucess additional capital must be secured.

At the same time it was known that the American Locomotive Company were anxious to commence operations in Canada. Railway men the world over are interested in the coming era of railway expansion in Canada which will demand an increasing number of locomotives. The British manufacturer having the advantage of a preference in our markets and the duty on some locomotives amounting to three to six thousand dollars, the American Locomotive Company decided to locate in Canada.

For over two weeks direct negotiations were in progress between the managements of the American Locomotive Company and the Locomotive and Machine Company. Matters came to a head on Monday when S. R. Calloway, of New York, and A. J. Pitkin and H. C. Heguenburg, of Schenectady, N.Y., arrived in Montreal. They had a conference with Roger Miller, J. T. Davis and M. J. Haney, representing the local concern, which resulted in the merging of the two companies. The plant is to be put in shape immediately for the construction of from 150 to 200 locomotives per year.

In connection with the locomotive plant there is also a large plant for the manufacture of structural steel and it is the intention to operate this also at its full capacity.

General machinery conditions show some improvement this week. It would be a mistake to suppose that there has been any boom for the market has not been quite up to expectations this Spring. Nevertheless there is in almost all lines a much better feeling and the indications point to a very considerable improvement.

In machine tools there are several large buyers on the market. The Fairbanks Company secured a good proportion of the C.P.R. order for machine tools for their new Winnipeg shops. Some other orders went to New York firms. Among other buyers on the market is the new Easlein Automobile Co. in which U. H. Dandurand, real estate agent, is interested. This concern is building on Bleury street this Spring. Several local houses are bidding for the tool supplies.

The demand for engines and boilers continues steady with no new features of importance to note. Engines of small horse-power are in the greatest request.

Wood-working machinery is still in good request and one or two more sawmill outfits have been sold to buyers in the province. It is still impossible to ship to any points except on the main lines.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, March 11, 1904.

THE weather has not been so severe during the past week and as a consequence the blockade on the railway lines has been relieved to a great extent. Consequently more shipments have been made this week than for several weeks and the general outlook is much brighter than for some weeks. Local machinery dealers report an increase in the number of enquiries, and the general indications are that it was the severe weather that caused the slump in the machinery trade. During the past weeks very few travellers have been out, but next week will see them out in full force again. This factor in itself will make things brighter during the week to come.

The two prominent features of the market this week are sawmill outfits and engines and boilers. Still engines and boilers keep their position on the market firmly, the position which they have occupied since the first of the year. There have been quite a few sales this week and numerous enquiries. Enquiries for sawmill outfits have been numerout, and a few orders have been placed with local dealers.

The demand for iron-working machinery is fair, but there is no advancement to be reported since last week. General wood-working machinery is receiving some attention, a few enquiries having been received.

Perhaps conditions on the electrical machinery market are more encouraging than in any other line of machinery. Local manufacturers are running their plants to their full capacity and are receiving any number of enquiries. One local manufacturer said that this amount of business at this time of the year was very unusual. He says that they have as much business on hand at the present time as they had last Fall. This is especially encouraging since not until May or June is generally a rather off season, the busiest time of the year not coming until August or even September.

Gas and gasolene engines are in fair demand, local dealers making several sales, and receiving quite a number of enquiries.

New York.

The Iron Age says of the New York market:

Evidences of improvement are to be found in several branches of the machinery trade. Some fairly good sized orders were booked by machine tool dealers and their mail during the last week has brought assurances of future betterment

of trade to materialize in the near future. Some of the long anticipated railroad propositions appear to be approaching the stage of consummation. In electric travelling cranes there has been special activity in this city. This is largely due to the interest attached to the big order of the International Steam Pump Company. Members of the engine boiler and steam specialty trades are showing market signs of hopefulness, and we are informed on good authority that the large electric projects which have been contemplated for the Metropolitan district are evincing considerable more life than they have displayed for some time past. In this connection a good deal of attention is being paid to the project of the Public Service Corporation of New Jersey, who contemplate the construction of a power station in the Hackensack Meadows, which, we are informed, is to form the nucleus around which a gigantic high tension station is to be built to eventually supply all the electric railway lines in Northern New Jersey.

Steam Consumption.

THE most reliable method to determine the steam consumption of an engine, says Mining and Scientific Press, is to make an evaporation test; that is to measure the water fed to the boiler in a given time and delivered to the engine in the form of steam. This method, however, entails considerable trouble and expense. So engineers often figure out the water consumption from indicator diagrams. The term water consumption and steam consumption are here used indiscriminately, for a pound of water will produce a pound of steam at any pressure. Figuring that way can never be wholly accurate, because the data requisite to insure results are not thus procurable. That is, the amount of water accounted for by the indicator is always considerably less than it ought to be because of cylinder condensation, valve and piston leakage, to the extent that it might be that only 50 per cent. or at best not more than 90 per cent. of the water passing through the cylinder would be accounted for by the indicator. But if the cylinder were properly steam jacketed, or if superheated steam were used, and there were no leakage of steam from valves or pistons, the water consumption could be closely calculated from an indicator diagram

MACHINERY AND ELECTRICAL NOTES.

The Intercolonial Railway is to be double tracked between Bedford Bridge and Windsor Junction.

The name of the J. F. Pease Foundry Co., Limited., has been changed to Pease Foundry Co., Limited.

The machinery for the new pit head of the Western Fuel Co., at Departure Bay, Vancouver Island, is now en route.

The Jones & Moore Electric Co., Toronto, have just shipped 2 motors, a 40 h. p. and a 20 h. p., to H. C. Fontaine, Coaticook, Que.

A prominent manufacturer of Berlin, Ont., C. K. Hagerdorn, reports that the Redpath Co. of that town are preparing to manufacture automobiles.

The Kemp Manufacturing Co., Toronto, Ont., has just had a 40 h. p. electric motor installed by the Jones & Moore Electric Co., Toronto.

The Morris Manufacturing Co., Hartney, Man., are now installing their machinery, and it is expected that they will be in operation in six weeks.

Duchesneau & Co., Hartney, Man., are enlarging their carriage factory and machine shop, and are about to install another engine and a number of iron working machines.

The Ingersoll Electric Power & Light Co., Ingersoll, Ont., are installing two new generators of 75,000 watts each to their plant. A 200 horse power engine is also being added to the plant.

The ratepayers of Moose Jaw, N. W. T., have carried a by-law to raise $150,000 for water works, sewers and electric lights, and also $10,000 to assist in the erection of new municipal buildings.

The J. F. Brown Furniture Co., Toronto, have just had 2 generators, one of 1,000 light capacity and the other of 500 light capacity, installed by the Jones & Moore Electric Co., Toronto.

At the meeting of the Provincial Mining Convention, held in Victoria, B. C., recently, the tariff on mining machinery was discussed, and a committee was appointed to urge the Dominion Government to make certain concessions.

The Stayner Light & Power Co., Limited, Stayner, Ont., have been incorporated with a capital of $40,000, to operate works for the production of electricity for light, heat and power purposes. The directors are: J. S. Knox, M. Gartlan, and S. L. Devine, all of Stayner.

The Levy, Weston & McLean Machinery Co., Limited, Toronto, have just shipped a saw mill outfit, together with engine and boiler, to the Hobbs Lumber Co., Powassan, Ont. This is a new firm who are just establishing their plant. This machinery firm are also shipping a 200 h. p. gasoline engine to D. Hooker brick tile manufacturer, Welland, Ont.

J. R. Woodward, representing the Eastern Townships Mining & Smelting Company, appeared before the city council of Sherbrooke, Province Quebec, recently and asked for assistance from the city for the projected enterprise. The company intend having a subscribed capital of $40,000, and will erect a copper smelter and plant to cost $25,000. The amount of bonus asked for is $10,000, with exemption from taxation for ten years.

The International Coal & Coke Co. have recently opened a new town, Colman, four miles west of Blairmore. The company purpose operating extensive coal mines there, also coke ovens, one hundred of which are to be built this Summer. Colman is to be an open town; no company hotels, stores, etc. There is already a first-class hotel with 40 bedrooms. Two first-class hardware stores, one bank, several general stores have been started. Altogether Colman looks like a very prosperous town.

Transmission Rope Contract.

The Consumers' Cordage Company, Montreal, are supplying all the transmission rope used in the new Montreal elevator. This company have always made a specialty of transmission rope and this large contract is but another evidence of the esteem in which their goods are held. The contract is, of course, a large one, and the Consumers' Cordage Company are to be congratulated on having secured it.

An Advertiser's Error.

IN the advertisement of the Canada Corundum Co., Toronto, in last week's issue of Hardware and Metal, the following sentence appeared:

It is the presence of emery in the corundum that gives to it its abrasive qualities.

This should have read:

It is the presence of corundum in the emery that gives to it its abrasive qualities.

The point the advertiser was drawing attention to was that emery is an impure form of corundum. It contains about 20 per cent. to 40 per cent. of corundum (free crystalline alumina), the remaining 60 per cent. to 80 per cent. being oxide of iron, silica, etc., and also combined alumina, which last has no cutting power. The 20 per cent. to 40 per cent. (the corundum) cuts, while the 60 per cent. to 88 per cent. rubs and burns. This is why an emery wheel will glaze; it is why it will destroy the temper of a steel tool. Corundum itself is a cold cutter, it takes a clean bite without rubbing.

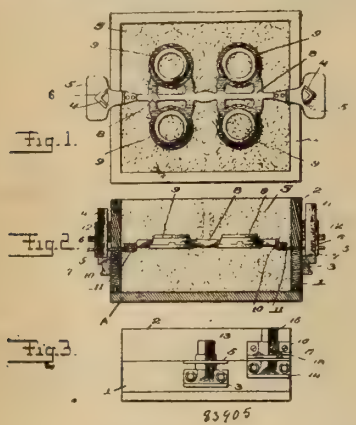
Moulder's Flask and Gate.

GRANTED Stanton Griffith, Beloit, Wisconsin. Claim: 1. In combination, a drag having guide pins, guides, suitably mounted on said pins, and a pattern carrying gate supported directly by said guides.

2. In combination, a drag having guide pins, guides suitably mounted on said pins, and a pattern carrying gate supported directly by said guides and adjustable with relation thereto.

3. In combination, a cope, a drag provided with guide pins, guides provided with flanges for co-operation with said pins, and a pattern carrying gate supported directly by said guides, the construction and arrangement being such that there is a flush joint between the opening faces of the cope and the drag, save for the limited spaces where said guides pass between said cope and drag.



4. In a moulder's flask, a pattern carrying gate, guides by which said gate is directly supported, a drag, means on said drag and co-operating with said guides whereby a right line movement is obtained during the drawing of the patterns.

5. In a moulder's flask, in combination, a pattern carrying gate, guides by which said gate is directly and adjustably supported, a drag, and means upon said drag co-operating with said guides whereby a right line movement is obtained during the drawing of the patterns.

6. In combination, a pattern carrying gate and guide members therefore, said pattern carrying gate being supported directly by said guide members.

7. In combination, a pattern carrying gate and guide members therefore, said pattern carrying gate supported directly by said guide members, and adjustable with relation thereto.

8. The combination of a drag and a pattern carrier having guide members in connection therewith co-operating with guide members on said drag, a cope, co-operating guide members on said cope and drag, independent of said first-mentioned guide members.

9. A pattern carrier comprising a gate 8, to which the patterns are suitably connected, the guide plates 5 directly supporting the ends of said gate.

10. A pattern carrier comprising a gate 8, to which the patterns are suitably connected, guide plates 5 directly and adjustably supporting the ends of said gate.

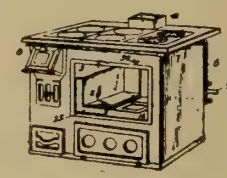
A Range.

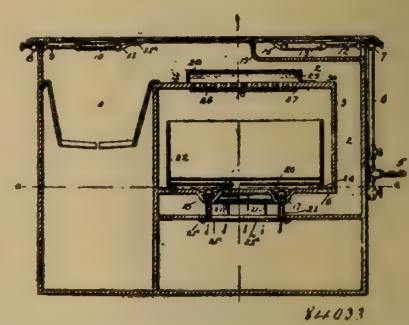
Granted John F. Ruth, co-inventors, St. Louis, Missouri. Claims: 1. The improved range, comprising an oven having a depression in its bottom whereby the remaining portion of the bottom is undisturbed, a fire box, a smoke passage leading from located within the said depression in the bottom of said oven and completely shielded from the smoke passage so that both gas and solid fuel may be burned at the same time and at different times without changing any of the parts, substantially as specified.

2. The improved range, comprising an oven having a depression in its bottom whereby the remaining portion of the bottom is undisturbed, a fire box, a smoke passage leading from said fire box and passing over and under the oven in order to supply heat to all sides thereof when solid fuel is used, a gas burner located within the said depression in the bottom of said oven and completely shielded from the smoke passage so that both gas and solid fuel may be burned at the same time and at different times without changing any of the parts, and vertical pipes 21 connecting said depression and passing through the outer wall of the smoke passage beneath the oven for the purposes of supplying air to the said burner, substantially as specified.

3. The improved range, comprising an oven having a depression in its bottom whereby the remaining portion of the bottom is undisturbed, a fire box, a smoke passage leading from said fire box and passing over and under the oven in order to supply heat to the sides thereof when solid fuel is used, a gas burner located within said depression in the bottom of said oven and completely shielded from the smoke passage so that both gas and solid fuel may be burned at the same time at the different times without changing any of the parts, vertical pipes 21, connecting said depression and passing through the outer wall of the smoke passage beneath the oven for the purpose of supplying air to the said burner, a secondary oven having a vertical wall and an open top and provided with the downwardly extending flange 25, which rests in contact with the bottom of the oven at the front thereof and compels the flames to pass rearwardly, and means for ventilating the oven, substantially as specified.

4. In a range, an oven having a portion 17 of its bottom depressed to form a burner seat, a burner 18 carried within said depressed portion and having its upper side even with the bottom of the oven, arms 20 rigid with said burner for holding it out of contact with the portion 17, a smoke passage 2 passing under the oven, pipes 21 leading through the smoke passage and through the depressed portion 17 of the oven bottom and terminating underneath the burner, a damper for controlling said pipes, openings 26 in the top of the oven, a damper for controlling said openings, a shield 28 above the oven and covering





the openings 26, and a damper 29 for closing said shield, substantially as specified.

5. In a range, an oven, a smoke passage passing underneath said oven, a burner seat 17 formed in the bottom of said oven, a burner 18 carried within said burner seat and completely shielded from the smoke passage and having arms 20, whereby it is held out of contact with the burner seat, air pipes 21 passing through the smoke passage under the oven and leading into the burner seat below the burner 18, a damper for controlling said pipes, and a valve controlled passage at the top of the oven through which the fumes may be permitted to pass, substantially as specified.

6. A range constructed with a fire box and a smoke passage and having heating holes at its top above the fire box and above the smoke passage, an integral partition wall 15 located in the smoke passage and shielding a number of the heating holes from the smoke.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

World's Champion Harness Horse.

COLDWATER, ONT.,
HARDWARE & METAL,
TORONTO.

Dear Sirs:—Your favor of the 29th January to hand re International Stock Food. I have only had their agency for about three months, and must say I have had great results and the best of satisfaction from International Stock Food.

International Stock Food not only pleases the merchant who sells it, but also makes a customer for me at every place where I put the goods in. International people know how to advertise so well that I have scarcely any effort in selling their food, as the farmer understands exactly what he wants from the way the firm advertises direct to the farmer. I have never handled a line of goods that gave me better results. Yours truly,

(Sgd.) H. M. BORLAND.

INTERNATIONAL STOCK FOOD

INTERNATIONAL STOCK FOOD will prove the best specialty line you ever handled, being a ready seller and netting you a large per cent. of profit. Over 40,000 dealers are to-day handling these goods, among them being many hardware men. We are anxious to increase the number of our agents, and would like to have you drop us a card so that we can furnish you with full particulars of our Special Dan Patch Lithograph Offer.

Address at once

TOURIST TRADE.

SIGNS are not wanting that the Summer of 1904 will see an unprecedented rush of tourists and Summer visitors to Canada, and the wise merchant will spend some of the leisure time which the snow blockade has given him in planning ways and means whereby this profitable tourist trade may be secured. Canada is now "looming large" before the British public and the number of English visitors to Canada is bound to be largely increased. The newspapers have remarked on the large number of English tourists who have braved the rigors of an exceptionally severe Winter and have enjoyed themselves. When such large numbers have come in Winter how many may we not expect during the Summer months?

But perhaps the greatest increase may be expected from the United States where the wealthy classes in their search of Summer enjoyment are becoming more and more interested in Canada. That the great railways realize the possibilities of this trade is evidenced by the increasing attention which they are devoting to the task of attracting tourists. L. O. Armstrong, colonization agent for the C.P.R., attended the Sportsman's show held recently in New York and he has returned to Canada more than ever impressed with the possibilities of this class of trade. He found the wealthy classes taking more interest in the show than ever before and inspired with an ever increasing love of a life such as is offered in and about Canadian woods, streams and lakes. He found that many of the wealthiest people in the United States are arranging for a Summer's outing in Canada, some at the regular Summer resorts and some in British Columbia, the Northwest, and the northern portions of Ontario and Quebec. The lake regions of Southern Quebec and the natural beauties of the Maritime Provinces also claimed their admirers.

The delights of Canadian Summer resorts and the pleasures of a Summer in the Canadian lake regions were placed before the visitors at the Sportsman's Show by the representatives of the Canadian railroads and the result is bound to be a larger influx than ever of American visitors.

The C.P.R. had a very large exhibit at the show and its corps of ten guides, some from British Columbia, some from the northern posts of the Hudson Bay Company, and others from the northern sections of Ontario and Quebec were kept busy arranging details with parties for next Summer. In previous years, the railways have had difficulty in finding a sufficient number of trained guides, and the C.P.R. is now contemplating the establishment of a school for the instruction of guides. This shows that one railway at all events is thoroughly in earnest.

Now what does all this mean to the merchant in Canada? It means that many Canadian towns are to see a great influx of visitors this Summer the majority of whom have money to spend and are willing to spend it. In a town where tourists may be expected, the merchant should make a special effort to cater to this class of trade. If possible, souvenirs of local interest should be collected for this trade. The merchant could gather many ideas by a visit to city shops where such goods are sold. But trade need not be confined to souvenirs. There are many staple articles which will be required during a Summer's visit and this class want the best. The merchant whose town is favored by the Summer visitor should prepare to supply this trade.

THE RECIPROCITY QUESTION.

IT is not sound economically to contend that reciprocity in its proper sense with the United States would not be a good thing commercially.

Reciprocity with the United States is not a defunct issue because it is an undesirable international business arrangement. It is because the people of Canada are as fully persuaded as they are of their existence that reciprocity, as the compilers of dictionaries, economists and business men understand the term, is not so understood in the United States. And yet we were told 13 years ago by a writer in the North American Review that the word was first officially used in 1782 in the provisional treaty of peace between Great Britain and the United States.

"Mutual equality of rights and benefits" is the definition of reciprocity according to one of their own lexicographers. But the interpretation they put upon it is the very opposite of the root meaning of the word. No arrangement which does not allow at least 90 per cent. of the advantage to accrue to them is acceptable.

Our tariff is about 50 per cent. lower than that of the United States and as they already sell us about $66,000,000 worth more of merchandise than they buy from us they should, as an evidence of their good intentions, approximate their tariff to ours. Both countries would be then on an equal footing and perhaps nearer than they now are to the starting point for an equitable reciprocal arrangement.

In the meantime the National Board of Trade, manufacturers' associations and other commercial bodies in the United States may pass many resolution of the Dominion could readily, by matter. It may help them to appreciate Canada and perhaps incidentally to learn what reciprocity really means. But until they bring forth fruits meet for repentence there is not even a possibility of reciprocity with Canada being obtained.

NOT THE MAN FOR THE PLACE.

London, March 2.—The Daily Chronicle, referring to the rumor that Sir Richard Cartwright is to succeed Lord Strathcona, says that the former is a slashing debater, a man of culture and a friend of the late W. E. H. Lecky.

THE above press despatch refers to a rumor which has from time to time gained considerable credence on this side of the Atlantic. It is to be sincerely hoped that "there's nothing in it."

Sir Richard Cartwright is one of the foremost public men of Canada, one of the most effective debaters in the Canadian House of Commons; his career has been as honorable as it has been long. He has, in fact, fairly earned the title of "Nestor of the Canadian Parliament."

Yet he is not the man to succeed Lord Strathcona in London. The office of Canadian High Commissioner is one that calls for strenuous and virile business enterprise and progressiveness in addition to its social and diplomatic obligations.

Lord Strathcona has been a business man in the truest sense and his presence in London has done much to establish better business relations between the two countries. But even with Lord Strathcona in authority not enough attention has been paid to the needs of the industrial and commercial interests. So strong has been the agitation for improvement in this regard that Parliament voted $25,000 toward the establishment of a commercial agency in London.

The responsibility for the expenditure of this money rests with Sir Richard Cartwright as Minister of Trade and Commerce. What has he done? What steps have been taken toward the establishment of this agency, which is so seriously needed and so insistently demanded by the business interests of Canada? We are still waiting to hear of the first step in the right direction, the first move in this matter. And from present indications we are likely to continue waiting—for how long none can say!

It is not surprising in view of Sir Richard's seemingly contemptuous indifference to this matter, to his inaction where prompt and progressive action was looked for, that Canadian business men should look upon his appointment to the office of Canadian High Commissioner in London with serious misgivings; more, even with anger.

If Sir Richard Cartwright is sent to London as Canada's representative the social and diplomatic duties may safely be entrusted to him, but another man of proven ability must be sent to take care of Canada's business interests. Such men are to be found in the Dominion Parliament if that be deemed advantageous. Out of the House there are many men of the right type.

In the meantime it is to be hoped that influence may be brought to bear upon Sir Richard to induce him to establish the commercial agency in London for which the necessary money has been set aside.

THE NEW ASSESSMENT BILL.

ON Tuesday the Municipal Taxation Committee of the Ontario Legislature completed its labors, and in the afternoon reported the same to the house. The principal amendments to the bill are in substance as below:

Distillers will pay a business tax on a basis of 150 per cent. of the real estate assessment instead of 125 per cent., while the brewers will pay on 75 per cent. instead of 100, and 60 per cent. on malting house portions.

Manufacturers will pay 60 per cent. instead of 50 per cent. and dividend tax; they are not to be considered as wholesalers because of selling by wholesale goods of their own manufacture.

Retailers in cities of over 50,000 pay on 25 per cent., in other cities 30 per cent., and in town and other municipalities 35 per cent.

Clubs that do not sell fermented liquots or supply meals are put in the 25 per cent. class instead of 50.

Coal and wood and lumber dealers pay 50 per cent. instead of 25.

For professional men occupying premises used partly for residence and partly for business 50 per cent. of the assessed value of the premises occupied is to be considered as a full assessed value, and they will pay on a basis of 50 per cent. of that assessment

Hotels have been taken out of the 50 per cent. class and placed in the 25. The shop licenses remain in the 50 per cent. class.

Curling rinks are exempted from business tax; they were in the 25 per cent. class.

Electric railways are classed with street railways on a 50 per cent. basis.

The minimum amount of the business assessment of any person is raised from $150 to $250. Persons are exempted from paying business tax on dividends derived from industrial concerns.

Brokers, financial agents, manufacturers' agents, or other agents who sell goods by sample only pay on income, and not on business assessment, but all commercial agents not included in that list are to pay a business tax on a basis of 50 per cent. of premises or portions of premises occupied.

All of these, it must be remembered, have yet to be adopted by the house, and there is likely to be a keen discussion before some of the bill becomes law.

INQUIRIES FOR CANADIAN GOODS.

Among the inquiries from the Canadian Government office in London, Eng., is a firm asking to be placed in touch with Canadian manufacturers of blind lathes. Another firm seeks through the Imperial Institute to be placed in communication with Canadian importers of glass bottles of various kinds. The names of the enquirers may be obtained from the editor of Hardware and Metal.

A BRITISH VIEW OF CANADIAN PREFERENCE.

FROM time to time many utterances of British statesmen, economists, business men, etc., regarding the rebate of 33 1-3 per cent. given British exporters from the Canadian customs duty have found their way across the Atlantic.

Some speakers have recognized in this preference a decided advantage; others are firmly convinced that its value is microscopic, if existant. In fact the general impression, according to views which reach Canada, in Great Britain seems to be that the Canadian preference to British goods has sprung from a fine patriotic motive but has been of no practical advantage to British manufacturers. An instance of this viewpoint just to hand is the following article, reproduced from the Iron and Steel Trades Review, London, February 27:

It is constantly stated that the special rebate on duties on British goods imported into Canada has resulted in a great increase in our trade with the Dominion. This is used as an argument to prove that the introduction of the system in our trade with Australia, South Africa, and other parts of the Empire would produce equally satisfactory results. "We believe it to be a "fact that neither the rebate of 25 per "cent. arranged in 1897 nor the in- "crease to 33 1-3 per cent. in 1901 has "been of the slightest benefit to British "trade with Canada. It is true that "our exports to Canada have been in- "creasing since 1897, but it is true, in "spite of the rebate, the commercial "nations who are our competitors have "made relatively greater progress in the "Canadian market."

Figures have been officially given in the House this week showing that in 1903 our exports to Canada were more than double the values recorded in 1897, the total rising from five millions to eleven millions. We are very strongly of opinion that in these years, by reason of the rebate, we gained practically nothing, and the Canadians had to make up this shortage in the import duties in some other way. The increase of 2 1-2 millions in the Canadian trade in 1902, and of another £800.000 in 1903, had nothing to do with rebates, but was entirely owing to abnormal activity in the industries of the United States, the great source of supply for Canada; and perforce, rebate or no rebate, Canadian buyers were driven into our markets. Now that the rush of business is over, American manufacturers will again be able to attend to the requirements of their customers across the boundary, and we anticipate that our business with the Dominion this year will fall far short of the figures for 1903.

HARDWAREMEN WILL DINE.

THE annual banquet of the Toronto Hardware Section of the Retail Merchants' Association will be held at Webb's on Friday, March 25, at 8.30 p.m.

It is to be hoped that the retail hardwaremen of Toronto will unite to make this function a truly representative one, that the attendance, the enthusiasm and the discussion may lead to a stronger feeling of unity and zeal than has characterized the attitude of the trade in the past.

There are many reasons why Toronto hardwaremen should unite, reasons which are too well known by each retailer in the city to need mention here. This association is working steadily to the end of getting the retail hardwaremen of Toronto united for the protection of their own interests and is deserving of practical support of all retailers and general sympathy of all branches of the trade.

THE SPECIAL SPRING NUMBER.

INASMUCH as the special Spring number of Hardware and Metal will be issued next week all subscribers desiring to insert either advertising or reading matter are requested to send in the same at the earliest moment possible.

The issue will be a big one and the number printed considerably beyond our usual circulation. This entails much extra time in printing the last pages so that all copy must be in the editor's hands at least two full days earlier than usual.

Much of the paper is already printed, so advertisers or subscribers wishing any position except in the last forms must have their copy in the office of publication by Monday.

Any persons desiring extra copies are requested to notify us at once, as the demand for the issue is, judging from present indications, likely to be large.

PERSONAL MENTION.

Mr. A. Beechy has opened a hardware store in Hespler, Ont.

Mr. A. Runsteller, harness dealer, Glen Allan, Ont., has put in a hardware stock.

Mr. T. P. Bell, hardware dealer, Beeton, Ont., has sold out to Mr. W. F. Strangways.

Mr. Geo. M. Edwards, managing director Henderson & Potts Company, Montreal and Halifax, was in Ottawa this week.

Mr. John Dickie, of John Dickie & Co., general merchants, Pickering, in an interview with The Grocer this week, stated that his business had been surprisingly good during the past two months in spite of adverse weather conditions.

Mr. R. W. Ross, of R. W. Ross & Co., hardware merchants, Prescott, Ont., died in that town on Sunday, 6th inst. Mr. Ross had a wide circle of friends in the hardware trade who will regret his loss. The business will be carried on as usual under the management of his son and son-in-law.

Messrs. J. Hofman, of the American Axe and Tool Co., and Archie Macfarlane, of A. Macfarlane, Montreal, were in Toronto on Friday. They had just returned from a business trip to the Pacific coast and were en route to Western Ontario points. Business was satisfactory all along the line, they reported.

Among the visitors to Montreal during the past week were noticed Lt.-Col. Garthshore of the McClary Mfg. Co., London, Ontario, and Mr. H. G. Wright, of E. T. Wright & Co., Hamilton, Ontario. Both gentlemen received a hearty welcome and were usually the centre of a coterie of friends in the rotunda of the Windsor Hotel.

Mr. T. Anderson, of the firm of Merrick, Anderson & Co., Winnipeg, has been in Montreal for several days calling upon his old friends who, it is needless to say, were glad to see him. Mr. Anderson is an old time resident of Quebec Province and at one time travelled for the Montreal Rolling Mills Company. He is well known among the hardware trade of Canada.

Mr. Miles S. Chapman, for the past 7 years head clerk with John Dickie Co., general merchants, Pickering, Ont., has bought out the hardware business of W. J. Reazin. Mr. Chapman will add a stock of tin and granite ware, and a stock of stoves later on. The prospects for Mr. Chapman are bright. He takes with him in his new business the good will of a large circle of buyers; he has youth, fitness, and energy on his side; and the territory he will serve is both large and prosperous. His place in Dickie & Co.'s will be taken by Mr. S. Gormley, whose home is Pickering, but whose acquaintance extends all over Western Canada

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL.
232 McGill Street.
Montreal, March 11, 1904.

Hardware.

THE freight blockade has been at least partially lifted and the hardware jobbing trade has felt a considerable impetus in consequence. The general tie up was aggravated last week by the cancelling of all trains on the Quebec Southern, due to labor difficulties. At time of writing the road seems likely to reopen at once, but the jobbing houses have suffered no little inconvenience in consequence. Freight for Sorel and various other points on the south shore had to be shipped by Bertier and this has caused vexatious delays. The general situation is, however, somewhat improved and freight is now commencing to move. The wholesale houses are themselves receiving long delayed supplies and are now commencing to fill orders which have been waiting for weeks. Collections are still reported very unsatisfactory and it can scarcely be expected that there will be much improvement until some weeks after the roads become passable and merchants dispose of their goods. Meanwhile the general feeling of confidence among the retail trade continues and the number of orders received this week for April and May shipment is much in excess of last week.

There are very few price changes to note this week. Annealed hay wire and annealed and oiled wire are now sold at list price plus usual extras. This is an advance of about 25 cents per 100 lbs. on hay wire. Mrs. Potts' sad iron handles are now sold at $9 per gross, which is a decline of $1. The new prices on heavy screw hooks and hinges were referred to last week and will be found below. Jobbers are finding difficulty in obtaining single barrel shot guns from the American makers. Prices have been withdrawn by the manufacturers and the wholesale houses are at time of writing unable to get satisfaction as to the future course of the market.

Poultry Netting—Trade shows some improvement this week, the number of orders received for April and May shipment showing a considerable increase. Prices remain firm at former quotations. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—Also in good seasonable request at steady prices. Our quotations are as follows: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb. boxes, $12.50 list; 25 and 50-lb. boxes, $12.25 list; 100-lb. boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—In the reference to this line in last week's issue the name of the B. Greening Wire Co., Hamilton, should have been included. Their list is identical with that of the Montreal Rolling Mills and their discount is the same, 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—As noted before, the discount has been recently fixed at 40 per cent. which means a slight decline in price.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list. The price is not definitely settled but the differences are less than they were a few weeks ago.

Hardwood Step Ladders—It is impossible to quote with exactitude as prices are "open." Not long ago one manufacturer was quoting at about the same price as for ladders made of soft wood. Hardware and Metal is advised that these prices are now withdrawn and that, although prices are not uniform, there has been a general advance of about 20 per cent.

Heavy Screw Hooks and Hinges—As noted in our last issue the price of size 12 inches and upwards has been fixed at $3.25 per 100 lbs., which is a decline of 25 cents; the price of 6, 8 and 10-inch sizes is $4.25, which is a decline of 25 cents per 100 lbs.

Lawn Mowers—A feature of the market this Spring is the early and steady enquiry for lawn mowers. Prices continue steady at figures before quoted, which were: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Garden Hose—The demand continues excellent at the following discounts: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—The discount is 60 per cent. Orders for Spring delivery are now being booked in fair number.

Spring Hinges—Steill in excellent request, the demand showing a considerable increase. Prices continue seady at the following figures: No. 5, $17.25 per gross; No. 10 $18 per gross, No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Game Traps—The discount on "Victor" is 72 1-2 per cent. and on "Hawley and Norton" 60 and 2 1-2 per cent. An occasional order is still being received.

Wire Nails—A typographical error occurred in our report last week. The printer made us say that prices are fairly maintained, whereas it would be correct to say that prices are firmly maintained. That remark still applies. There is nothing new to report and we again quote as follows: $2.40 per keg carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, and St. John.

Cut Nails—Prices rule steady at former quotations. There is very little doing. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—There is nothing new to report. Good orders are being booked at present for Spring shipment. Prices continue firm as follows: $3 per 100-lb. keg for galvanized, and $2.80 for bright; 25 to 50-lb. packages, 25c. extra.

Pressed Spikes—The discount is 25 per cent.

Horsenails—As noted in last issue, the discount on "Countersunk" is 57 1-2 per cent. Trade is quiet and featureless We again quote the following discounts: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 57 1-2 per cent.; "C" brand, 40,10

and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Horseshoes—The remarks made in last issue still apply. Trade is now very quiet but in what little is passing prices are being well maintained. We again quote the following prices: Iron shoes light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c. per keg extra f.ob. Montreal onlv.

Screen Wire Cloth—A good proportion of the orders for next season have already been booked. The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—Trade continues very quiet. Prices are still as follows: Nos. 6, 7, and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, $3.35; No. 12, $2.95; No. 13, $3.10. Car lots 5 cents less. Freight prepaid in less than car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—Trade this week shows some improvement. There is an improved demand for May shipment. Prices continue firm and unchanged as follows: No. 5, $3.65; Nos. 6, 7 and 8 $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12. $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c. extra per 100 lbs. will be charged.

Barb Wire—There is no change in the situation. As was noted before, the lower prices quoted by one American manufacturer to the retail trade have been withdrawn. A great many retailers bought from this manufacturer and are somewhat disturbed by the persistent reports that deliveries can not be made. As to that, Hardware and Metal offers no opinion. It seems improbable that any manufacturer would establish an agency in Canada and make such large sales if deliveries could not be made. In the meantime, most retailers have bought and there is little activity in jobbing circles. If it should happen that deliveries can not be made, there will be a big rush in a month or more. Our quotations are as follows: $2.75 per 100 lbs. f.o.b. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—There is only a moderate demand. Prices are as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.: spring wire, $1.25; best steel wire, 75c.; bright soft-drawn, 15c.; hay-baling wire, 20 to 25c.

Annealed Hay Wire—Annealed hay wire and annealed and oiled wire are now sold at list price plus usual extras. This is equivalent to an advance of about 25 cents per 100 lbs. on hay wire.

Fine Steel Wire—There is only a moderate enquiry. The discount is 25 per cent., with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs.; 1-2-lb. hanks, 37 1-2c.; 1-4-lb. hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—There is a steady demand both for immediate and future delivery. Prices are firm and unchanged. Discounts are as follows: Best iron rivets section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

Screws—In good brisk demand both for immediate and future delivery. Manuafeturers expect to be able to meet this season's demand for all sizes. We again quote as follows: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Shot—Business is entirely of a sorting nature. There is little doing. We again quote as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

Cordage—As was noted last week manila and sisal rope have been advanced 1-2 cent per lb. Prices are firm at the advance. We quote: Pure manila, 15c.; British pure manila, 12 1-2c.; sisal, 12c.; double lathyarn, 11c.; single lathyarn, 10 1-2c.; Russian tarred spunyarn 13 1-2c.; jute rope, 3-8-in. in diam. and upwards, 9c.; cotton rope, 20c.; cotton twine, 24c. for 3 and 4 ply. Cotton bedcord, 90c. to $1.70, according to length. Sash cord 30 to 31 1-2c.; cotton candle wick, 22 to 24c.

Building Paper—Trade continues fair at following unchanged prices: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

Cement—Trade is now beginning to show some improvement after the prolonged mid-Winter dullness. There are few actual transactions but enquiries for Spring shipment are now being received and all the indications point to an improved trade very soon. There are large stocks of German cement on hand and in spite of the surtax it is not expected that any advance will be made at present. We quote: Canadian cement $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl., ex store, and American, $2.20 to $2.40 ex-cars.

Firebricks—Trade is showing some slight improvement. Quotations are: English, $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

All lines of plumbing goods and plumbers' tools are in good demand, indicating that the trade are expecting a busy Spring. There are no quotable changes in price.

Lead Pipe—Business in lead pipe is showing a further improvement. The price is 8c. for composition and 7c. for ordinary. The discount is 35 per cent.

Soil Pipe and Fittings—Business is much improved, orders now being received for delivery by the first boats. The discounts remain as follows: Light soil pipe, 3 to 6-in., 50 and 10 per cent.; medium and extra heavy soil pipe, 2 and 6-in., 60 per cent.; extra heavy soil pipe, 8-in., 45 per cent. Light fittings, 2 to 6-in., 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in., 60 and 5 per cent.; extra heavy fittings 8-in., 45 per cent.

Solder—Wire solder is quoted at 18 1-2c. and bar solder at 18c. These prices are well maintained.

METALS.

The general tone of the metal market is showing considerable improvement. In almost all lines there is a firmer feeling, although quotable changes are few. The competition between American and British houses continues brisk in such lines as tinplates and galvanized iron. The great difficulty which is being experienced in the metal market is the general tie up of freight. A local agent who has been waiting for weeks for freight which is tied up in Buffalo showed a Hardware and Metal representative some advices received from that city to the effect that all the yards in that city and eight miles of track on the main line are filled with cars that have been there for weeks. Little hope was extended of early shipment. One large metal house received several cars this week which had been delayed for weeks only to have part of the shipment refused by purchasers on the plea that they arrived too late to be of service.

Copper continues strong and no changes in price have been made locally. Tin is a little weaker in primary markets and, although no nominal changes have been made here, prices quoted below would be shaded for quantities. Pig lead is very firm.

Pig Iron—There is not much activity yet. Summerlee is still quoted at $20.25 to $20.75 per ton.

Bar Iron—Prices are said to be steady at prices quoted. There has been considerable activity in bar iron during the last few weeks. We quote: Merchants' bar, $1.75; horseshoe iron $2; forged iron $1.95.

Black Sheets—There is some improvement in general business both in orders from stock and import orders. Prices quoted are based on shipments from stock and might be shaded a little on import orders. The primary markets are, however, very firm and prices locally are well maintained. We quote: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 18 to 20-gauge, $2.30, and 8 to 10-gauge, $2.40.

Steel—There is not any special activity. We quote the following prices: Sleighshoe, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There is a continued slight improvement in general business but the total volume of trade is not very large at present. We quote as follows: Black Diamond, 8 to 9c.; Saunderson's, 8 to 9c. according to the grade; Jessop's, 13c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-4c.

Sheet Zinc—There is a fair demand. For cask lots, the price is $6.15 to $6.25 and for smaller lots the price is $6.50.

Galvanized Iron—Business continues very good for delivery at the opening of navigation. Some large bookings have been made recently. We quote the following prices for 28-gauge: Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz., $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c. extra.

Tinplates—The tinplate market continues firm in England and Wales and prices here are stiff in consequence. Cokes are quoted at $3.75 and charcoals at $4.

Terne Plates—Slightly weaker and in consequence the higher price ($7) formerly quoted is withdrawn. The price is $6.75, which is possibly subject to concessions for quantities.

Ingot Tin—The market is a trifle easier and although no actual changes are made this week in local quotations these prices are undoubtedly subject to some concessions for quantities. For ordinary business in small lots the price is 32 to 32 1-2c.

Ingot Copper—The market continues strong. We quote 13 3-4 to 14c. per lb., subject to slight concessions for large quantities.

Antimony—Held firmly at 8c. per lb. Supplies are not very large.

Coil Chains—There is not much activity at present. Several jobbing houses are waiting anxiously for shipments to arrive. We quote as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8 1-2c.; No. 3, 7c.; 1-4-in., $6.10; 5-16-inch, $4.70; 3-8-inch, $4; 7-16-inch, $3.80; 1-2-inch, $3.70; 9-16-inch, $3.55; 5-8-inch, $3.35; 3-4-inch, $3.30; 7-8-inch, $3.25; and 1-inch, $3.20 with 10c. allowance on carlots.

Canada Plates—The local market continues firm in sympathy with primary markets. As noted last issue, there is some enquiry from various points in the Province of Quebec where Canada plates are used for roofing. We again quote as follows: 52s., $2.30; 60s., $2.40; 75s., $2.55; full polished, $3.60, and galvanized, $4 to $4.10; galvanized 60s., $4.25 to $4.35.

Pig Lead—The market continues very firm and there has been a slight advance. We now quote $3.30 to $3.45, the former price being for large quantities.

Zinc Spelter—Quoted at 6c.

Scrap Metals—There is a better demand for cast iron scrap. We again quote the following prices: Heavy copper and wire 10 to 10 1-2c. per lb.; light copper, 10c.; heavy red brass, 10 to 10 1-4c.; heavy yellow brass, 8 1-2c.; light brass, 5 1-2c.; lead, 2 1-2c.; zinc, 2 3-4c. to 3c.; iron, No. 1 wrought, $11 to $12; machinery scrap, $14 to $15; stove plate, $12; mixed country rags, 65c. to 75c. per 100 lbs.; old rubbers, 6 to 6 1-4c. per lb.

HIDES.

There has been no quotable change. Receipts have picked up to some extent, though the quality is still not the most desirable. We quote as follows:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No. 1 calfskins	0 11

Toronto, March 12, 1904.

Hardware.

WHOLESALE houses have been fairly busy this week. The railroads have all week been taking freight for many points throughout the province and towards the end of the week for all points. This has relieved the situation materially and the wholesale houses are now able to send out goods ordered for delivery on the first of March, but which the railroads would not accept. While, however, freight is being accepted the trouble is by no means ended. On every side one hears of inconvenience and even loss resulting from the delays in transportation. Heavier freight such as coal, coke, lumber, etc., seems particularly difficult to get forward, with the result that factories in several centres have had great difficulty in obtaining fuel.

The question at once arises, when will matters be straightened out? It is clear that at the moment the railroads are weeks behind with their business. Therefore, inasmuch as under normal conditions last Summer the railroads, the Grand Trunk particularly, had difficulty

SITUATION WANTED

WANTED—A position in hardware, stoves or tinware, agricultural implements or otherwise; thoroughly up in all classes of hardware, stoves, tinwork and general implement goods; have had over twenty years' experience; good buyer and bookkeeper; would like a position where energy and good management are required; at present engaged, but could go in one month. Address Box 116, HARDWARE AND METAL, Toronto. (12)

in handling their business, it is argued that it will be months before the situation will be cleared, especially if the Spring business is as active as anticipated.

While there is still every expectation of a heavy movement in the Spring there is no doubt the continued unfavorable conditions have had a depressing effect, some of the shrewdest jobbers expressing the conviction that through the weather conditions some business has been lost which will now never be done. However, this loss is not great enough to cause serious anxiety and prices are steady throughout.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—A moderate trade with prices as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—There is not much doing. Prices are as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Clevland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb wire—A few orders still coming in. Our quotations are as follows: $2.75 per 100 lbs f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The market is steady. We quote the following prices: No. 9, $2.70 per 100 lbs f.o.b. Cleveland, freights equalized with factory points at Hamilton, London, Welland or Windsor and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—Some business is reported with prices unchanged at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—Not much doing. Prices are now steady at $2.30 per keg f.o.b Toronto and Hamilton.

Horseshoes—There is practically nothing doing. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to

$6.75. If shipped from factory 15c less.

Horsenails—The market is quiet. We still quote discounts as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 57 1-2 per cent.; "C" brand, 40, 10 and 7 1-2 per cent. off; "Monarch," 50 and 7 1-2 per cent. and "Peerless," 50 per cent.

Screws—A fair trade is doing. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Rivets have been advanced in the United States, but Canadian makers manifest no disposition to follow this lead. We again quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—Several concerns ery of this line. Prices are steady as follows: Carriage bolts, common ($1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—While there is not much doing the market retains its strength, the advance of 1-2c last week being easily maintained. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11 1-2c; single lathyarn, 11c; double shingleyarn, 11 1-2c; single shingleyarn, 11c; sash-cord "Hercules," 29 to 30c; "Star," 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply, 23 to 24c; 4-ply, 27 1-2 to 28c; calking cotton, 16c; cotton waste, colored, 6 3-4c; white 10 to 12c.

Building Paper—Orders are generous but shipments are slow owing to freight blockade. We quote the following prices: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw

C. M. CUTTS & CO., Toronto Junction.

and sheathing, $35 per ton; slaters' felt, 60c per roll.

Cement—Business on the books is increasing and when freight is moving freely a rush is expected. We quote small quantities: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

Firebricks—Firebricks are quiet this week, but will find a ready sale as soon as the weather opens up. We quote English and Scotch, each, at 28 to 35c.

PLUMBING GOODS.

Business in Toronto is excellent and trade is improving from all sections. Prices are steadier than for some time, but no changes are recorded. Our quotations are as follows:

Lead Pipe—A fairly good movement is recorded. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—A moderate trade is reported at steady prices. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—Business in this line continues to improve. We quote: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples up to 2-inches, 65 per cent.; 2 1-2 to 6-inch, inclusive, 60 per cent.

Copper Range Boilers—Trade in copper range boilers continues fair. Discounts at 15 per cent. continue.

Brass Goods—Trade is improving in brass goods. Valves and steam specialties are moving particularly well.

Iron Pipe—A good volume of trade is recorded. Prices show no change. We quote f.o.b. Toronto: 1-8-inch, $2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

METALS.

While the railways are accepting freight deliveries are none too generous. Midland and Sydney smelters have been unable to send their pig iron to the Toronto market. Manufacturers seem to have been well supplied, however, for there are no reports of a shortage. Bar iron is still easy and several sales are reported at 5c below our current quotations. Owing to the difficulties in getting black sheets forward and the big demand for them in Toronto there is a strong movement from stock at the moment. In other lines there is practically no change from last week except that the railways are accepting freight for delivery.

Pig Iron—The outside markets continue firm. Prices are unchanged locally but there is is practically nothing doing owing to difficulty of securing delivery. Prices are still $18.50 for No. 1 and $18 for No. 2 f.o.b. Toronto. Prices at Midland are $1.50 lower.

EASTLAKE SHINGLES

ARE SO EASY TO HANDLE.

They fit together perfectly by means of their patent side lock—can be quickly laid by any handy man—and last so long, being absolutely Fire, Rust, Leak, and Lightning Proof. These are the points that commend them to your customers.

They're the popular steel shingle of Canada.

You're not doing all the business you might do, unless you keep Eastlakes in stock.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

Bar Iron—Some business has been done lately at $1.75 but a stronger market is anticipated so present quotations are the rule, the figures being as follows: $1.80 f.o.b. Toronto for extras cut to length while rolling; 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Black Sheets—A brisk demand from stock for city delivery is reported, the cause being the difficulty of getting forward import orders. We quote as follows: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—Business keeps fairly active. Prices are unchanged. We quote the following prices: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—A fair trade is doing. Locally there is no change, the quotations being 30 to 30 1-2c.

Galvanized Sheets—A fair demand is reported at firm prices. We quote as follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 guage.

Tinplates—Prices are steady, with a fair demand. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—Both ingot and sheet are in excellent demand for import. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—The market keeps firm both locally and at primary points. We quote: $3.30 per 100 lb for pig lead and $3.65 for bar lead.

Zinc Spelter—The volume of business is not large. Prices are unchanged at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping, 17c.

Antimony—8c per lb.

PETROLEUM.

The expected decline in the Canadian market has not yet come but is still shaky at last week's quotations, which are as follows: Canadian prime white, 19 1-2c; Canadian water white, 21 1-2c; American prime white, 20c; American water white, 22c, ex-warehouse.

Hides, Skins and Wool.

Still further decline of 1c. per lb. is noted in No. 1 and 2 steers while cured hides have dropped off 1-4c. This is largely due to large quantities of inferior goods being placed on the market. The market also denotes a scarcity of lamb and sheepskins which have advanced 5 to 10c. apiece since our last quotations. Our quotations are as follows:

HIDES.

No. 1 green, per lb	0 07
" 2 " "	0 06
" 1 " steers, per lb	0 07½

TRADE CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

At the annual meeting of the Vancouver Board of Trade held on Tuesday evening, the retiring president, Mr. H. T. Lockyer, manager of the Hudson's Bay Co., in his address, said with reference to the progress of the city: "In spite of the unfortunate series of strikes which took place early in 1903, it can, I think be safely stated that during last year Vancouver showed greater progress than at any period since the city was established. The large amount of building which took place during the whole of the year has resulted in very materially altering the appearance of the city, filling in vacant spaces in the business portions and turning vacant blocks in the residential quarters to densely populated sections. It is satisfactory to note that in spite of the large amount of building that has been done and still is going on, it is not out of proportion to the requirements of the city; business blocks and warehouses are occupied as soon as completed (being built by merchants and commercial houses for their own particular requirements and the large additions to the residential quarters are more than equalled by the continuous demand, owing to the still increasing population, which it is confidently anticipated, will by the end of the present year exceed 40,000."

* * *

Discussing business conditions generally, Mr. Lockyer's remarks were in part: "While the volume of the city's trade has materrialy increased, and to such an extent that Vancouver is now fully recognized as being the distributing centre, not only for the Province of B. C. and the Yukon Territory, but also for the country situated to the east of us as far as Calgary and Lethbridge, it must be admitted that trade conditions in some respects show no improvement, but rather the reverse. Competition in many lines of business is exceedingly keen, so much so that in many cases the margin of profit is more imaginary than real and many staple commodities are sold at a smaller percentage on the actual cost than is obtained on similar goods in Eastern Canada and U. S. points. This is a very unfortunate feature in connection with local trade, as merchants and manufacturers have to be prepared for large expense accounts in B. C. as compared with older settled sections of Canada, and cannot carry on a remunerative business unless the percentage of profit is correspondingly larger. It is gratifying to note there have been few failures in the city during the past year, and that payments on the whole have been well met. While strikes in the early part of the Summer and the small run of fish in the Fraser river affected materially our local trade, these drawbacks were probably fully made up by the increased activity in manufacturing and mercantile centres; this particularly applying to the lumber industry, one of our great staples, which has a very important bearing on the commercial welfare of our city."

* * *

The survey of McLean Bros. Coast-Kootenay Railway line between Vancouver and New Westminster and between New Westminster and Chilliwack up the Fraser River, has been completed and the profiles and plans are now on file in their offices. This company, who have a charter from both Dominion and Provincial Governments is confident of receiving aid from the Dominion House at its next session which convenes on March 10. They also believe the Provincial Government will give them a measure of recognition.

* * *

A wealthy Australian, who owns a large sheep run in the Commonwealth, is at present visiting in this province. He has been making enquiries in Victoria with a view to establishing a woollen mill in that city. It seems that the low freight rates offered on the Canadian-Australian steamers on wool shipped from Australia are a substantial inducement and a factory could easily be established in Victoria which would be able to compete with Eastern factories, particularly for the large and ever-growing market of Manitoba and the Northwest Territories.

* * *

A seizure by the Government timber inspector of all the logs at the camp and mill of an American company operating camps at Port Renfrew and a mill at Sidney, on Vancouver Island, this week caused some excitement in lumber circles. The seizure was for the non-payment of timber dues and over a million feet of logs as well as all the tools and donkey engines and other equipment at the camp were included. The mill was also tied up. In addition there was nearly a million feet of sawn lumber in the yard at Sidney, which was to have been exported to the United States and this too was seized. The amount in arrears is claimed by the Government to exceed $2,000. The owners came over from Blaine, Washington, next day and commenced negotiations to release their plant and lumber. If the dues and costs of seizure are paid it is likely the matter will be fixed up. Other mills and logging companies are said to be "on the list" for summary collection. The laws are very stringent respecting the making or returns to the Government and it is expected that there will be some prosecutions in such cases as the one which has arisen, as the operators ship all their product out of the country and nothing but prompt action can ensure payment of dues.

* * *

William Irwin, of Peterboro', Ont., is a guest in the city at the present time. Mr. Irwin is a lumberman of Eastern Ontario, and a large stockholder in the big concern known as the Pacific Coast Lumber Co., who have mills on Coal Harbor, this city. Mr. Irwin, with Mr. J. G. Scott, manager of the Pacific Coast Co., and Geo. McCormick, M.P., for Muskoka, were the three original shareholders in the company which at first established in New Westminster in 1891, engaging in the shingle manufacturing. This firm has the distinction of shipping the first car of red cedar shingles to Eastern Canada, the shipment having been made in 1892. The original mills, on the Fraser near New Westminster were burned in 1901, and the company has since built the magnificent mills in Vancouver, both a shingle plant of large dimensions, and a lumber cutting plant of most modern equipment and large capacity having been installed. Wm. Sheppard, of Waubashene, Ont., and other prominent Eastern lumbermen are heavily interested in the Pacific Coast Lumber Company.

* * *

A despatch from Nelson says: "C. Fernan, consulting engineer of Newcastle-on-Tyne, and Oscar L. Lefebero of Brussels, who have been in the Kootenays for the past month seeking sites for zinc reduction and lead reduction plants, to-day announced that they had practically determined on the sites of two plants. The zinc enriching plant will be located at Rosebery, on Lake Slocan. The zinc smelters will be at Fernie or Frank. Location will be determined after they have made a trip to the East and had a conference with the people owning coal mines in the Crow's Nest Pass. They hold that it would be cheaper to haul the zinc concentrates and ores to the point where cheap fuel can be obtained than haul fuel to the mines.

Vancouver, March 5, 1904.

HARDWARE CONDITIONS IN WINNIPEG.

Office of Hardware and Metal,
Room 208, McIntyre Block.
Winnipeg, March 7, 1904.

RATHER contrary to expectations the Winnipeg price list remains practically unchanged. Conditions mentioned then continue, houses are very busy getting out Spring orders and there is a general appearance of activity everywhere. Movement of freight has improved during the week and several branch lines on which there has been little or no traffic for the past three weeks are now open and taking freight shipments.

Allward & McCormick, dealers in stained glass, have just moved into comfortably new quarters on the east side of Smith street, between Portage and Graham avenues.

* * *

Campbell Bros. & Wilson have this week got up a portion of the signs on their new building. On the massive oak doors are cast brass shields bearing the words, "Royal Shield Brand," and the monogram of the firm at the bottom. The company take special pleasure in these signs because they are the first brass castings made in Winnipeg, the work being done by Mr. Andrew Schmidt, brassfitter. On the north face of the building appears another shield about five feet high and three feet across, which has the firm's name in gold on a black ground. The huge letters are not applied the whole sign is carved from a solid piece of wood and the letters overlaid with gold. A similar sign is to be placed on the Princess street front.

* * *

U. S. STEEL IN CANADA.

During the past four months the American steel and iron pools—structural plates, bars, billets and rails—have placed more Canadian orders than in any previous year. For the first time in years the American companies are offering to pay freight to certain points in Canada. In booking the large Canadian orders, the Steel Corporation and its competitors have cut prices under all known English and German bids.—The Wall Street Journal.

THE PITTSBURG METAL MARKET.

(From The Iron Trade Review.)

Pittsburg, March 10, 1904.

THE week has been one of decided activity in the iron trade and with the improvement in demand has come some advance in prices, this being most marked in Southern pig iron. Whether because of the Steel Corporation's purchase, or because of other signs of a supposed turning point, a number of important consumers of forge and foundry iron have been on the market, and large transactions have resulted. Some of this business was done at $9 at furnace for Southern No. 2, but $9.25 is now the common minimum of Southern sellers, while within a day or two $9.50 has returned as the firm quotation of some furnaces. The week's business for one Southern company was 55,000 tons and another was not far behind. The heavy pig iron buying and the developments of the week in certain finished products have begotten a much more hopeful feeling throughout the trade, which the coming of the season for building operations has done much to increase.

The Steel Corporation's Bessemer pig iron purchases and options are closely estimated at 170,000 tons, of which about 90,000 tons is actually taken. Outside buying of Bessemer and the week's business in forge iron bring the total up to 200,000 tons. The options are to be exercised on the 10th of March and April. Pittsburg district pipe works have been in the market for gray forge iron, about 15,000 tons being taken by two interests. A cast iron pipe foundry has been a buyer of forge and other irons to the extent of 15,000 tons and a pig iron merchant interest has bought 12,000 tons of foundry grades. A number of consumers of foundry iron in the Chicago district and the Central West have been in the market in the week, and the buying movement has been broad and well sustained. While $7.75 at Southern furnaces has been touched on gray forge, $8 is now the minimum, and in the Pittsburg district Northern forge has advanced to $13, while Central Western furnaces that have shaded $12 at furnace for No. 2 foundry in recent weeks are now on a $12.50 basis.

The March 1 report from blast furnaces using Lake Superior ores reflects the steady increase in production in February. There were 113 furnaces in and 50 out on March 1, while of 166 reporting on Feb. 1, 99 were active and 67 were idle. The Steel Corporation had four-fifths of its furnace capacity active on March 1 as against two-thirds on Feb. 1. Its leading subsidiary company has reduced its pig iron stocks to practically nothing and deliveries on the recent purchases of iron are being urged forward.

The Pittsburg district seconds the more active condition in pig iron with a cheerful report concerning finished material, though heavy products are still much behind the lighter forms. Specifications are coming in with much more freedom and mills are running on fuller schedules. In the Pittsburg district 10,000 tons of structural material will be needed for railroad work soon to be begun, but there is little definite development elsewhere in building projects that have been regarded as promising. The plate market is still far from satisfactory and rails are at a standstill.

The bar, wire and pipe trades continue to furnish encouragement. Bar iron has advanced $1 a ton, in some markets $2, and an early advance in steel bars is regarded as at least probable.

Tin plates have shown new life in the past few weeks and canning interests have made partial requisitions. Prices have gone to a point that is forcing wages down and an important conference is in session at Pittsburg as this is written, the leading manufacturer having proposed a further 10 per cent. reduction.

The Lake Superior iron ore interests after a further meeting in New York on Monday, which reached no agreement, adjourned to April 1. Three weeks' developments in the iron market are expected to help to a final decision.

A scarcity of cars still prevents the proper movement of coke and as a result prompt foundry and furnace coke has advanced from 15 to 25 cents a ton. As high as $1.75 has been paid for Connellsville coke for shipment the remainder of this month, while prompt foundry is selling at prices ranging from $2.25 to $2.50. For the week ending Saturday, Feb. 27, the production of the upper Connellsville region amounted to 171,549 tons and that of the lower region to 48,940 tons.

The American Steel & Wire Co. this week announced an advance of $1 per ton on wire nails and wire products effective on March 7. For several weeks the higher price has been asked by all the large jobbers and several of the largest independent producers however. We make the following quotations in large quantities: Wire nails, carload lots, to jobbers, f. o. b. cars Pittsburg, $1.90 base, plain wire, carload lots, $1.80 base; barb wire, carload lots, $2.20 base; staples, carload lots, $1.05 keg. Galvanized, 30 cents extra.

BUSINESS CONDITIONS IN NOVA SCOTIA.

By Regular Correspondent of HARDWARE AND METAL.

BUSINESS is not very active as yet. March came in like a lion, this province being visited by a heavy wind and rain storm accompanied with thunder and lightning. The rain left the roads for some days in an impassable condition, but travelling is now much improved. Travellers are out on their respective routes and there is quite a lot of business being booked for later delivery, but so far there has been little chance to do any shipping. All Spring hardware is selling to a moderate extent and when navigation opens, which apparently will not be for a month yet, there will be the usual activity in wholesale circles.

• • •

In the last week the price of cordage on this market was advanced one-half cent per pound. Fibre has been going up for the last two months and it is possible that still higher prices will rule on cordage before many months. The sales of this article are usually heavy in this province during the Spring as such large quantities are required annually in the fishing industry. Manufacturers' agents here state that a great deal of fibre is this year being consumed in the production of binder twine and that this is one of the causes of the present firmness in the cordage market.

• • •

There is a very good demand at present for lobster and fishermen's supplies. The lobster season East of Halifax opens on April 1, and the factories are making extensive preparations to prosecute the business as fully as possible owing to the high prices now obtainable on the American markets. These high prices are due to the fact that the present Winter has been so severe that fishermen West of Halifax who are allowed to operate in the Winter months, were not able to secure the usual quantity and hence the markets have been comparatively bare.

• • •

The hardware fraternity in this city were startled by the sudden death on Saturday morning of Patrick Shelley, clerk in the wholesale hardware house of H. H. Fuller & Co. He was a volunteer fireman and dropped dead of heart disease while at work at Saturday's big fire. This firm have had a number of deaths in the last year or so. Not long ago one of the partners, Mr. Richards, passed away. Last Fall another partner, Mr. W. C. Birne, died after a brief illness, and now Mr. Shelley's death is recorded.

Halifax, March 8, 1904.

WM. JESSOP & SONS' REPORT.

THE report of Wm. Jessop & Sons, Sheffield, published in British papers of a fortnight ago, show a balance of over $30,000 besides a dividend of over $114,000.

The buildings, machinery and plant have been efficiently maintained. The stocks in Sheffield and in America have been taken by the company's own staff and have been brought into the account at prices in no case above actual cost, with freight and duties added. The stocks at the principal American depots have been verified by Mr. G. L. Weed, of New York.

The equipment of the American works has been completed, and no funds in respect of capital expenditure have been drawn since August last. In the early months of 1903, as may generally be looked for when commencing the working of a new plant of this character, a number of difficulties arose, which reduced the output considerably, but these have been overcome, and the whole plant is now working satisfactorily. In connection with the outlay on these new works, it was decided in August last to offer the remaining £50,000 of the authorized issue of £200,000 mortgage debentures, and these were fully subscribed.

During the year the directors have availed themselves of the opportunity which was presented owing to the death of the senior partner of J. J. Saville & Company, steel and file manufacturers, of Triumph Works, Sheffield, and of Libau, in Russia, of acquiring an interest in the business, and it is anticipated that the connection will prove advantageous to both concerns. As the negotiations were only brought to a close in the current year, 1904, the transaction is not shown in the present balance sheet.

V. E. Paradis has been appointed curator to J. A. Michaud, general merchant, Chicoutimi, and also to E. Villeneuve, general merchant, Jonquieres.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c a word each subsequent insertion.

Contractions count as one word, but five figures (as $1.000) are allowed as one word.

Cash remittance to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

SITUATIONS VACANT.

WANTED — Experienced hardware traveller. To cover Manitoba for firm having good connection. Best of references required. Good opening. Apply Box 103, HARDWARE AND METAL, Toronto. (7tf)

STOVE-PLATE moulders. Apply The McClary Manufacturing Co., London. (f)

STOVE-MOUNTERS wanted; at once; a few good men; steady employment. Clare Bros. & Co., Limited, Preston, Ont.

SITUATIONS WANTED.

IN wholesale house by experienced hardware clerk. Best of references. Address Box 115, HARDWARE AND METAL, Toronto. (11)

LANCASHIRE MAN requires situation as assistant to hardware trade; six years' experience with his father (wholesale Ironmonger), and wishes to have one or two years abroad, Halifax preferred. Age 22. State terms and address Frank Higson, Ivy-Bank, Castle street, Bolton, Lancashire. (12)

YOUNG Englishman, eight months Canadian experience, desires responsible position as bookkeeper and assistant in retail hardware business. Good references. Address Box 114, HARDWARE AND METAL, Toronto. (11)

BUSINESS FOR SALE.

A LIVE hardware business for sale in Hamilton. Stock about $6,000. Apply Webber's Hardware, Hamilton, Ont. (11)

AGENCY WANTED.

AN established Manufacturers' Agent in Montreal representing several large American houses, with representatives covering all Canadian territory, wishes to secure a good Canadian manufacturer's line in Hardware or Specialties. Address Box 102, HARDWARE AND METAL, Montreal. 20

TO EMPLOYERS.

The undersigned labor agent is prepared to forward help to employers who are short-handed. Picked hands of any trade procured on shortest notice, paying own passage. Over 800 registered. Term moderate. F. C. SMITH, 22 Penton street, London, Eng. (14)

TO RENT.

FOR RENT—A large well-lighted floor (size 30 x 100) in a Montreal up-town store (St. Catherine street, west). Suitable for china and glassware, furniture, carpets or housefurnishing goods. Use of passenger elevator and goods hoist. Moderate rental to desirable tenant. Correspondence solicited. HARDWARE AND METAL Office, Box 25, Montreal. (10)

BUSINESS CHANCES.

TINSMITH wanted for the Northwest with capital. Correspond with Merrick, Anderson & Co., Winnipeg, regarding good opening for tin shop and hardware. (11)

R. E. THORNE, 768 Craig St., MONTREAL

Wholesale Agent and Importer

Dry Colors, Ochres, Bronze Powders, Aluminum Powder. Schlag Metal, Bronze Liquids and Varnishes.

Toronto Office—29 Melinda St.

PAINT, OIL AND BRUSH TRADES

Further Fire-Proof Paint Experiments.

ANOTHER American city has been devastated by fire. In Baltimore, as in previous conflagrations of great extent and fierceness, no barriers could resist the flames. Fire-proof buildings melted like wax. The best that modern ingenuity could devise or money buy was ashes before that resistless flood of fire. It was another demonstration of the futility of the hope that the fire fiend may some day be conquered. That day will never come, and the ever-present problem will be to prevent the outbreak and the spread of flames before they reach the point at which they are uncontrollable, says the Paint, Oil and Drug Review.

In a previous editorial we pointed out the limitations of fire-proof liquids and paints. It is possible to secure a very high degree of resistance to fire or, more accurately speaking, resistance to very high temperatures by the application of certain liquids to cloth, paper, wood, etc., or by the use of fire-proof paints of known reliability. This is a subject of uppermost importance in the minds of architects and engineers at the present time, and inventors are making substantial progress along this line in a practical way.

Some form of a sulphate seems to be inseparable from the idea of an absolutely fire-resisting chemical. The old formula was based on sulphate of ammonia; the new one employs sulphate of aluminum. Experiments with this sulphate, by the Ferrell process, have given excellent results. Ordinary tests of materials similarly treated are made in an open gas jet, which gives a heat of about 550 degrees Fahrenheit. But with the sulphate of aluminum as a fire-proofing material it is possible to demonstrate with a Bunsen burner of 2,460 degrees power, showing a resitsance to heat of wood so treated that is little short of marvellous. Equally satisfactory tests have been made with a fire-proof enamel which contains a compound of aluminum. These tests are no longer in the experimental stage but have been verified by engineers of the highest standing.

The remarkable non-conductivity of sulphate of aluminum is the chemically interesting feature of this process. It is said that this sulphate may be subjected to the most powerful heat in a crucible, until it has lost all of its volatile elements including a percentage of sulphuric acid, and that it may then be poured out into the palm of the hand without burning the holder. Heat has no effect on it except to free it from gases.

Even with such a salamandrine substance as sulphate of aluminum, it is not claimed that fire-proofing can be made absolute; but though intense heat will destroy any known structural material in time, it is possible to prevent the breaking out of flames—conflagration. And in that sense the use of fireproof paints and liquids is successful in preventing fires and in saving lives and property.

Why Cod Oil is Dearer.

U. S. Consul Bordewich, Christiania, Norway, reports: "Considerable apprehension is felt that the conditions ruling the Lofoten fisheries in 1903 will also make themselves felt in 1904. According to recent newspaper reports the Greenland seal has again appeared in great numbers in the bays of Finmarken. Before 1903 these animals were never found near the Norwegian coasts in numbers, but that year they came in large shoals as early as January and the fishermen believe, contrary to the views of scientific people, that they were the cause of keeping the cod so long away from its customary spawning places.

"Prices for the best quality of medicinal oil f. o. b. Christiania have for the last three years been as follows: In 1901, 56 kroner ($15) per barrel; 1902, 130 kroner ($34.80) per barrel; 1903, 400 kroner ($107.20) per barrel—all in wood-covered tin barrels of 30 gallons, price including barrel."

"Orolite" Oil Finish

is designed for all surfaces where a quick hardening varnish, or a rubbed or polished surface is required.

It is for interior use only, except where an outside undercoating is desired, over which a wearing or outside varnish is to be placed.

The color is quite pale, and will not discolor the lightest natural woods.

It brushes and works easily, has the necessary flowing, good lustre, dries hard to rub in 36 to 48 hours, and will polish in from three to five days. It will not check, crack, peel nor turn white.

Put up only in the following sizes with our brass seal Gallons; ½ gallons; ¼ gallons; pints; ½ pints.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 10, 1904.

WITH milder weather conditions, there has been a slight improvement in the paint and varnish situation as regards shipments. Deliveries, however, are still uncertain and it will be some time yet before the congestion of the railways is relieved and a smoother condition of things can be looked for. Orders are still coming in very freely for Spring shipments and prospects have seldom if ever been brighter at this time of year. Firmness characterizes almost every item on the paint and color list. Prices of linseed oil and turpentine are not uniform, the differences being mainly due to the different terms of payment on which the various firms are selling. The range of prices will be found below. Prices of shellac varnishes are also somewhat uncertain and some wide ranges will be noted in our quotations below. Dry red lead, orange mineral and litharge are somewhat firmer on account of stocks being light as they are apt to be at this time of year. It should be understood that the prices quoted on ground white lead are for the most part merely nominal. The prevailing price seems to be about $4.50, but competition continues so keen that it is impossible to quote with exactitude. It is hinted that an agreement may soon be made among the grinders to advance the price considerably above the present absurdly low figures. The agreement may not be made but any merchants thinking of stocking up might do worse than place their orders now. We quote:

Ground White Lead--Best brands, Government standard, $4.60 to $4.75; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead.—$4.25 in casks, and in kegs $4.50.

Dry White Zinc.—Pure dry, in casks, 6 1-4c.; in 100-lb. kegs, 6 3-4c.; No. 1, zinc, in casks, 5 1-4c.; in 100-lb kegs, 5 3-4c.

White Zinc (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

Putty.—We quote: Bulk, in barrels, $1.50; in 25-lb. tins and irons, $1.85; bladded putty in barrels, $1.75.

Orange Mineral.—Casks, 7c.; 100-lb. kegs, 7 1-4c.; smaller quantities, 8 1-4c.

Red Leads.—Genuine red lead, in casks, $4.25; in 100-lb. kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge.—Ground, casks, 5c.; in less quantities, 5 1-2c.; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 48 to 49c.; 5 to 9 barrels, 47 to 48c.; boiled, 1 to 4 barrels, 51 to 52c.; 5 to 9 barrels, 50 to 51c. Delivered in Ontario between Montreal and Oshawa at 2c. per gallon advance.

Turpentine—Single barrels, 92 to 93 1-2c.; 2 to 4 barrels, 91 to 92 1-2c. Standard gallon of 8.6 pounds.

Benzine—25 to 26c.

Shellac Varnish—Pure white, $2.75 to $3.50; pure orange, $2.65 to $3.40; No. 1 orange shellac, $2.35 to $2.50.

Mixed Paints.—$1.20 to $1.40 per gallon.

Castor Oil.—8 3-4 to 9 1-4c. in wholesale lots, and 1-2c. additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c.; arsenic kegs, 14 1-2c.; 50 and 100 lb. drums, 15c.; 25-lb. drums, 15 1-4c; 1-lb. packages, 16c.; 1-2-lb. packages, 18c.; 1-lb. tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, March 11, 1904.

WHILE the fact that deliveries can be made by some of the railway lines has a caused a fair demand in some lines for immediate delivery the market is still dull. Prices are unchanged throughout. We quote:

White Lead—Ex-Toronto, pure white lead, $4.50 to $4.65; No. 1, $4.05 to $4.20; No. 2, $3.75 to $3.90; No. 3, $3.35 to $3.50; No. 4, $3.25 in packages of 25 lb. and upwards; 1-2c. per lb. extra will be charged for 12 1-2-lb. packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine, in casks of 560 lb., $4.25; ditto, in kegs of 100 lb., $4.50; No. 1, in casks of 560 lb. $3.75. to $4; ditto, in kegs of 100 lb., $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c. per gallon.

Paris White—90c. to $1 per 100 lb.

Send us a post card and let us tell you all about it.

INVESTIGATE

the merits of **"ANCHOR"** Liquid Paint.

It will stand the light of the closest investigation.

Quality and everything needed to inspire confidence and create permanent trade is found in its make-up.

The fact that the best white lead in the world, **Brandram's B.B. Genuine,** is used in its manufacture is one argument of its superiority.

HENDERSON & POTTS, Limited, Halifax.
HENDERSON & POTTS CO., Limited, Montreal.

Whiting—60 to 65c. per 100 lb.; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Linseed Oil—Raw, 1 to 2 bbls, 48c.; boiled, 51c.; 3 to 5 bbls, raw, 47c.; boiled, 50c.; 6 to 9 bbls., raw 46c.; boiled, 49c., delivered, Toronto, Hamilton, London and Guelph. One firm is quoting raw, 1 to 4 bbls., 49c.; boiled, 52c.; 5 to 9 bbls., raw 48c.; boiled, 51c.; 10 bbls. and over, open; ex-Toronto, 2 per cent. off 30 days.

Turpentine—Single bbls., 92c.; 2 to 4 bbls., 91c.; 5 bbls. and over, open, Toronto, Hamilton, London and Guelph, with 2c. extra for delivery outside. One firm quotes: Single bbls., 91 1-2c.; 2 to 4 barrels, 90 1-2c.; 5 barrels and over, open, ex-Toronto, with 2 per cent. off 30 days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

Glues—Broken sheet, in 200-lb. bbls., 8 to 8 1-2c. per lb.; cabinet glue, in bbls., 11 1-2 to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10 1-2c.; finest

STANDARD PAINT & VARNISH WORKS,
LIMITED

Makers of High-Grade Varnishes, Japans, Paints, Colors and Enamels.

Windsor, Ont.

THE PROPRIETOR'S STORY.

ALABASTINE we have been selling nigh on to twenty years, and know it to be reliable.

We dealers also know that Alabastine is what is in demand, and that to sell anything else for coating walls, we would have to do so on the recomen tation that it was the same thing, or just as good as **ALABASTINE.** Wou d not offer a substitue when Alabastine is called for; no necessity to do that, as it is easier to sell Alabastine, and in handling it we do not incur any risk on account of infringement of patents.

Alabastine is ready for use by the addition of Cold Water, made so by the inventor, Mr. M. B. Church, who was the first to produce a cold water preparation that is thoroughly practical, that has superseded all hot water mixtures, and forced other manufacturers to **UNDERTAKE** the use of the cold water process. Then, again, Alabastine is made in Canada, by Canadian labor and from Canadian materials. It satisfies my customers.

The trade supplied by Wholesale Hardware and Paint Dealers. Also by

"Island City" Paint and Varnish Works

ISLAND CITY

Our "Island City" Enamel Paints are the best in the market—17 artistic shades.

Our "Island City" Aluminum, Gold and Silver Paints can be used with great satisfaction on Furnaces, Radiators, all sorts of Furniture and Ornaments that require renovating.

P. D. DODS & CO., Proprietors, **Montreal, Toronto, Vancouver.**

WHY?

WHY DO I BUY THE CANADA PAINT COMPANY'S VARNISH?

BECAUSE their Varnishes are made by themselves upon scientific principles by modern methods.

BECAUSE there is a steady demand for them from makers of carriages and furniture.

BECAUSE they are put up in a handy form, attractively labelled, and do not entail waste.

BECAUSE I am in touch with a Varnish and Paint firm who keep posted on the requirements of the trade.

BECAUSE architects, house-owners and house-builders prefer their Varnishes, and specifiy them.

BECAUSE **The CANADA PAINT COMPANY** manufacture a full line of paints and decorating material.

BECAUSE in ordering everything from them I save time, freight, packages and money.

THE CANADA PAINT COMPANY LTD

HAS ADOPTED THE CASH SYSTEM.

Wilber S. Gordon, hardware merchant, Tweed, Ont., has after a wide study of the effects of the cash and credit systems of business, decided to adopt the cash system. He has consequently issued the following circular to the trade:

We take pleasure in announcing to our friends and the public generally that, after March 1st, we have decided to conduct our business, both buying and selling, on the CASH SYSTEM.

During the past year, manufacturers and wholesale hardware men have so shortened the terms of credit that, by the time we get our goods unpacked and marked, the bill is due.

Our business has become so large that we can no longer pay cash for goods and carry our customers' accounts.

The great majority of people are fully aware of its advantages and recognize the CASH SYSTEM as the correct business principle, beneficial alike to buyer and seller.

We believe that with the worry and leaks of the credit system cut off and the energy heretofore expended in entering, rendering and collecting accounts turned into the channel of wide-awake business management, we will occupy a vantage ground far in advance of our present position.

In cases such as contracts and building we will be open to make special terms.

We have no intention, by this action, to reflect upon any one, but in obedience to our convictions we adopt a rule of business, which we are firmly convinced will be advantageous to our customers as well as to ourselves, and ask for the hearty co-operation of all in the mutual interest.

Having fully determined to firmly adhere to this rule in the future our customers will kindly not ask us to transgress. WILBER S. GORDON.

Tweed, Feb, 20, 1904.

DEATH OF A PROMINENT MANUFACTURER.

MR. E. W. GILLETT, one of the best known citizens of Chicago, died at 9 o'clock last Friday night at his residence, 3334 Michigan avenue. He was born in Dexter, Jefferson Co., N.Y., and when six years old moved to Chicago with his parents. On the advice of his physicians he left at the beginning of this year for Southern California, but gradually grew worse and returned to Chicago about ten days before his death occurred.

Mr. Gillett was 61 years of age, and during the past two years had been in delicate health; but prior to that time

The late Mr. E. W. Gillett.

he was unusually robust and was a splendid type of American manhood. His demise will be learned with profound regret by a host of friends throughout Canada and the United States. During the past 40 years he has been extensively engaged in manufacturing grocers' sundries. Owing to his untiring and energetic efforts, the business soon attained phenomenal proportions. He took a very active interest in commercial affairs, and held a number of prominent positions, one of which was president of E. W. Gillett Co., Limited, Toronto. This position he had held since the inception of the company.

The deceased is survived by his widow and two children, C. W., of the firm of Gillett & Denniston, and Lillian M. He was a Presbyterian and was connected with the Second Presbyterian Church. The funeral took place Sunday afternoon from the family residence to Rosehill Cemetery.

STOVES AND TINWARE.

Air Movement and Registers.

IT is said that for ages it was the custom of the forefathers to go to mill on horseback with wheat or corn in one end of a bag and a balancing stone in the other, with the man on the horse perfectly satisfied with the arrangement. This man has had his counterpart in the furnace business. We are all the while perpetuating and continuing the blunders of our forefathers in the business, writes "Iowa" in the Metal Worker.

A word as to one direction in which we ought to make radical changes. Our furnaces and indirect heaters would do much better work if we had clear, unobstructed openings at the mouth of our warm air pipes instead of the hampering iron register. These registers act as a patch of brush acts in checking the movement of a Northwest blizzard. How are they made? First, to be handsome floor or wall ornaments; second, they are made to be strong, to prevent breaking through them; third, they are allowed some openings to let the air through, as it were, on sufferance, hardly as a real necessity. What has been the result? Thousands of houses have been poorly heated where the fuel used was ample and the heater fairly good, because the heater has been handicapped by these ornamental registers.

Heat is not a measurable quantity, like potatoes or coal. It is an effect. We get this effect by air movement upon the heated surfaces. The more rapid the air movement upon these heated surfacec the more we get from our fuel. Water moving with great mobility upon itself carries off all the heat that passes through the boiler shell. Hence the shell never gets red hot. Air cannot carry off the heat so rapidly, hence the iron or steel fire shell gets red hot. Now, handicap that air movement with a common register at the upper end of the warm air duct, and behold the heat lost as a result of the sluggish air movement in the pipe, and the double effect—loss of heat and increase of coal bill—as the result of this 50 year old blundering system of air handling.

Theoretically, a register should be made with bearing bars not over 1-16 inch thick, sharpened to an edge on the under side, these bars standing vertically, made deep for strength, and having not a bar more than necessary. Registers, too, should always be generous in size, considering the size of the supply pipe. Thousands of furnacemen have suffered continual loss along this line. This seems, perhaps, to many a matter of small consequence. They sit in the saddle and ride to mill with a stone in one end of the sack. Few registers are made in this country to-day that do not come squarely under this condemnation.

The steep grade handicaps the locomotive. The clog in the gearing of the mill paralyzes the whole plant. Manufacturers of registers are rarely practical heating men. They make what will sell, and furnacemen buy the registers because they can get nothing better. Here is a point for reformation in the furnace business. It is a matter of so much importance that a change ought to be forced upon the manufacturers.

The Frost Wire Fence Co., Welland, Ont., has established a galvanizing plant in connection with their factory, for the galvanizing of small articles.

A Non-Scalding Tea Kettle.

Wm. B. Bulmer, Windsor, Ont., has patented in Canada and the United States a safety non-scalding tea kettle, the patent rights of which he is desirous of selling in both countries. The unique feature of the kettle is the placing of the fill opening at one side of the centre line protected by a shield and a handle rigidly secured to the kettle at the top; also a steam escape on the top.

The advantages claimed are that the shield prevents steam from the kettle coming in contact with the hand while carrying or handling the kettle even though the lid be removed; that the kettle can be refilled with one hand without tipping; that when the kettle is boiling the escaping steam cannot effect the hand in any way; that the steam escape prevents steam or water escaping from the spout; that the rigid handle makes the kettle easier to lift and control.

HEATING AND PLUMBING

TORONTO PLUMBERS MAY STRIKE.

BUILDING operations in Toronto were last season curtailed greatly by labor troubles, particularly by strikes in the painting and carpentering trades. This year there is serious apprehension of a strike by the journeymen plumbers of the city.

The Toronto Master Plumbers' Association and the Journeymen Plumbers' Union have for some time been meeting frequently in conference to arrange a new agreement between master and man. Both parties are reticent as to the progress made at these meetings but it is generally believed that there is serious danger of a strike; that the men are likely to insist on an increase of wages which are not warranted by the conditions and that the employers are likely to face a strike rather than submit to the claims of the men.

It is to be sincerely hoped that these fears may prove to be without foundation; that the men may, before taking the dire and possibly disastrous step of declaring a strike, look into the facts reasonably, dispassionately and to the welfare of all concerned in the years to come as well as in the present season.

Under the present conditions there has been the most cordial relations between the master plumber and his employes; the Plumbers' Union has had full recognition; the masters have been ever ready to submit to a joint grievance committee any complaints made by the men, and where the complaints were well grounded that they have insisted that the matter be remedied; in short the Toronto Master Plumbers' Association has done everything in its power to strengthen the grip and enlarge the scope of the union.

Wages have been so high and the time taken by skilled men to do ordinary work so long, that one Toronto evening paper made a case, carried on a campaign against the master plumbers, taking the ground that their organization was practically a combine formed to charge exorbitant prices.

Now, if there was a strike, could the men reasonably hope to retain the sympathy and help of the masters? Hardly. Instead there would be enmity at the start and possibly bitterness at the end. And the strength of both organizations would consequently be impaired, possibly destroyed.

The immediate loss would not only affect master and journeyman plumber. "Building operations would be active in Toronto this Spring," said a watchful architect the other day, "If labor troubles could be avoided. So far, however, builders and contractors have held back to see how the season is likely to open up. A few increases in the scale of wages in the various trades or a serious strike in any one of the trades would do great injury. Lumber and other materials are now at top price so there is little encouragement to builders to put up premises when both labor and material is higher than will possibly be the case in a year or two.

"Nor would the dangers be escaped if the journeymen were to insist on higher wages, win their strike and enforce their demand. Instead, new troubles would surely arise. A condition would arise similar to that in New York City, which the Metal Worker protests against as follows:

"It has become very evident to those who are called upon to execute plumbing work for which first-class workmanship and intelligent workmen are required that the supply of skilled journeymen plumbers is by no means equal to the demand.

"Moreover, so far as New York City is concerned, this is by no means the only important factor in the situation. The local journeymen plumbers have issued an edict that no more boys must be taken into the trade for three years; neither will they allow graduates from the trade school, who would make valuable plumbers after a year or two of work under instruction, to be employed by the master plumbers. This makes it incumbent, in some cases, to send two journeymen to work where ordinarily a plumber and helper or apprentice could be used to the pecuniary benefit of both the master plumber and his customer.

"The result has been that the big shops which do new work, and which are subject to the strikes, lockouts and boycotts of the journeymen, are unable to handle the jobbing trade which they formerly enjoyed at a profit. Their customers caustically refuse the high charges for labor and employ other unhampered plumbers. One establishment, which formerly did a jobbing trade amounting to between $8,000 and $10,000 every year, is no longer able to compete with the smaller shops, and hence has lost this valuable branch of the trade. The smaller shops, carrying on a business with which the union journeymen can not readily interfere by means of strikes, lockouts and boycotts, are able to pursue their jobbing business unmolested and can use those journeymen who are less radical in their views, and who will work with either helpers or apprentice boys. This necessity of employing only members of the union has had the effect of supplying employment to unsatisfactory men, who have little interest in their business beyond the money it brings, and no desire to add to their skill or information, although they are insured support even though they prove a burden.

"This state of things has made it difficult to secure the class of industrious, intelligent and enterprising journeymen that are needed in first-class work, and plumbing contractors who are called upon to do a piece of work quickly are often reduced to the necessity of endeavoring to obtain men who are employed by some of their confreres in the trade, regardless of the inconvenience or disadvantage it may prove to the latter. The more light is thrown upon the situation the more pronounced the unreasonableness of it seems to be. It is not strange that some in the trade express wonder as to where the existing conditions will lead."

Building Notes.

Tenders are being called for the erection of a public school at Reston, Man.

A new Catholic church, to cost $150,000, is to be erected at Ste. Cunegonde, Que.

F. W. White, Winnipeg, Man., will erect a residence on Stradbrooke Place, to cost $5,500.

Tenders have been called for the erection of a new church at Norwood, Man., to cost $5,000.

Towns in the vicinity of Winnipeg are preparing to do considerable building during the coming season.

Windsor, Ont., is to have a new Catholic church. Williams Bros., architects, are preparing plans.

H. L. Willison is going to erect a five storey brick dwelling at corner of McDermot and Albert streets, Winnipeg. The ground floor will contain two large stores, while the rest of the building will be devoted to offices, etc.

CURRENT MARKET QUOTATIONS.

March 11, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Paterson's Wire Edged Ready Roofing

has successfully stood the test of Canada's variable climate for over twenty years, and is the only popular substitute for shingles.

We are advertising the above Roofing extensively in the "Farmers' Magazines" and in all cases we ask prospective customers to order our goods from their local Hardware Merchants.

There will be a very large quantity of our Ready Roofing sold in the future, and you can't blame us if you don't get your share of that trade.

CONNOR'S IMPROVED WASHING MACHINE.

The rubbing board in this washer works eccentrically on the clothes in such a way that it both rubs and squeezes the clothes with every stroke of the rubbing board.

LARGEST CAPACITY. STRONGLY MADE.
NEATLY FINISHED.
THE BEST FOR THE MONEY.

We have nine other kinds, send for our catalogue.

...ESTABLISHED 1849...

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WHY sell Old Style Cork Screws?

The People Want

WALKER'S SELF-PULLING

which draws the cork, cuts the wire, removes crown, seal and aluminum stopper. Does the whole thing. Each one tested and guaranteed. We manufacture over 50 different styles.

ERIE SPECIALTY COMPANY, Erie, Pa., U.S.A.

EVOLUTION IN RAZOR GRINDING.

English full hollow ground.

German full concaved.

THE AMERICAN DOUBLE HOLLOW.

Have you ever seen a razor too good to be used on your face?

The old-fashioned way to grind a razor was the English full hollow, but it was found that, if ground thick, it was harsh on the face, if very thin it would vibrate or would not shave clean.

About 30 years ago a new style of grinding was invented, the German full concaved; this was found better; it had only one fault, being thick above the edge it cannot easily be kept sharp on a strop, you have to hone it very often. We are making a newly Patented Razor, the American Double Hollow, which has twodistinct hollows. This razor, if properly used on a strop, practically never needs honing, because it is so thin above the edge. Try it and you will be more than pleased.

GEO. W. KORN RAZOR MFG. CO., *LITTLE VALLEY, N.Y. U. S. A.*

Want Ads.

In this paper cost 2 cents per word first insertion, 1 cent per word subsequent insertions. Contractions count as one word, but five figures (such as $1,000) may pass as one word. Cash remittance to cover cost **must in all cases** accompany orders, otherwise we cannot insert the advertisement. When replies come in our care 5 cents additional must be included for forwarding same. Many large business deals have been brought about through advertisements of 20 or 30 words. Clerks can be secured, articles sold and exchanged, at small expenditure.

RETAIL PRICES, **$1.25 to $2.50**

ARGUMENT.

We now offer a practical time piece for the Hardware Trade of Canada and base our statement upon the following:

First—It is absolutely guaranteed to keep accurate time.

Second—It stands rough usage and does not get out of order easily, making it the only watch for dealers outside of the jewelery trade to handle, and also making it a practical one for sportsmen, boys and all men who give a watch hard usage.

Third—Its low price and high quality insure a tremendous sale, which we further augment by furnishing many handsome advertising devices for your store.

Fourth—Last but not least, these watches offer a handsome profit. Price cutters are not supplied.

Sold by several leading Hardware Jobbers of Canada. We will tell you who they are upon request.

Trial Offer—To any Hardware Dealer who will write to us upon his business letter head and inclose 75c. we will send a sample watch (duty not paid) and our catalogue, so that he can test its accuracy and durability.

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

"THE REAL" SAFETY RAZOR IS A SELLER

OUR CONDITIONS ARE : Give to likely customers to try and if not absolutely satisfactory return it.

AGENTS FOR CANADA:

RICE LEWIS & SON, Limited, Toronto.
CAVERHILL, LEARMONT & CO., Montreal.

A New Kind of Razor

You'll be surprised at the way "The Real" Safety Razor shaves—*different* from any other razor.

It shaves clean and keen—smooth and easy.

It doesn't pull or break hairs.

"The Real" is the only perfect razor for *self-shaving*.

The *rigid handle* and the *anti-cut guard* make it better than the ordinary razor—*better control of the blade* on *face*, *strop* or *hone*—*quicker work* possible—*no cutting*.

It's better than other "safety razors" because it's a *razor*—not a hoe. Made of the *very finest* razor steel—*full concave*—2¼ in. blade.

GEO. W. KORN RAZOR MFG. CO., Little Valley, N.Y., U.S.A.

Binder Twine

BLUE RIBBON,	650	feet	per	pound
RED CAP,	600	"	"	"
TIGER,	550	"	"	"
GOLDEN CROWN,	500	"	"	"
STANDARD,	500	"	"	"
SISAL,	500	"	"	"

Blue Ribbon is no doubt the Queen of Binder Twine. It runs six hundred and fifty feet to the pound, and is manufactured from most select Manila Fibre. Six hundred and fifty foot Twine is the only Twine manufactured entirely from Manila Fibre. Dealers should beware of so-called "Manila" Twines which are advertised to measure less than 650 feet to the pound. They are mixed Twines.

Write for samples.

Consumers Cordage Company, Limited

Our " ROYAL " Brand of Binder Twine is manufactured of the finest raw material that can be obtained, and with the utmost care. For length and strength we have no competitors. Our Twine is manufactured with the latest machinery, and dealers desiring to have exclusive agencies should apply at once. Will name lowest prices, or will enter contracts without price named until The International Harvester Co. announces prices.

Wire, Write or 'Phone.

CANADIAN CORDAGE & MFG. CO., Limited

Peterborough, Ont.

THERE ARE SUITABLE TOOLS FOR EVERY TOIL.

HERE ARE SOME OF THE VERY BEST:

Style "A."

LEADER CHURNS

All Steel Frames Style "A," with double reversible Steel Lever.

Style "E," with double end Hand and Foot Drive.

Bicycle Ball Bearings.

Patented Cream Breakers.

The Best and Most Up-to-Date Churn obtainable.

May be used while seated or standing.

Prices on application.

Most popular Churn on the market.

Style "E."

RE-ACTING WASHER

The quickest acting, readiest selling, and most generally satisfactory Rotary Washing Machine on the market.

The only regret your customers will have after buying one of these excellent machines is that they did not know about it sooner.

They require them—you should stock them—we can supply them. Order early.

The New Century Ball-Bearing Washing Machine.

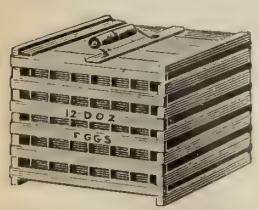
This machine cannot be too highly commended. It gives the best possible satisfaction to buyer and seller.

Made right. Built to last. Runs light. Never surpassed.

Five to seven minutes only required for a tubful.

The operator need not stand when using it, and these is practically no wear on garments.

Full information given on application.



Hold 12 doz. Eggs.
Pat. Aug. 5, '95.

Humpty-Dumpty Egg Crates.

The best and cheapest carrier in Canada. With fillers removed, most convenient for general use. A great economizer. No broken eggs. No time wasted. No disputed count. Order now.

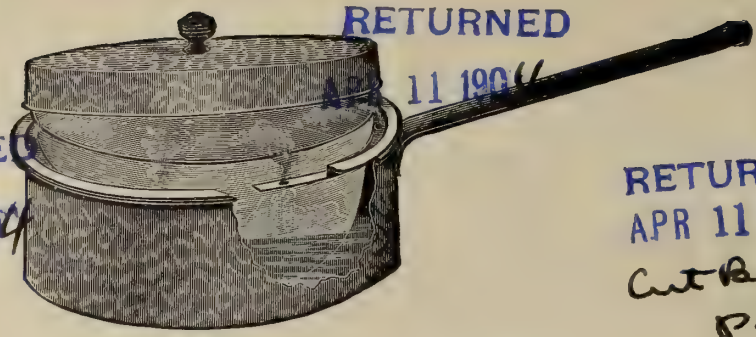
KEMP'S FACTORY MILK CANS AND CAN TRIMMINGS.
With Broad Hoops and Roll Rim Bottoms.
Neatest and strongest made.



KEMP'S CEREAL COOKERS.
Made in Diamond, Granite and Pearl Enamelled Ware, also Retinned Ware.

KEMP'S RAILROAD OR DELIVERY MILK CANS.
With Roll Rim Bottoms.
8 and 10 gallons.
Bodies made of 18-guage Tinned Iron.

KEMP'S GALVANIZED FEED BASKETS.
Corrugated Bottoms.
Half and 1-bushel sizes.

HEADQUARTERS FOR

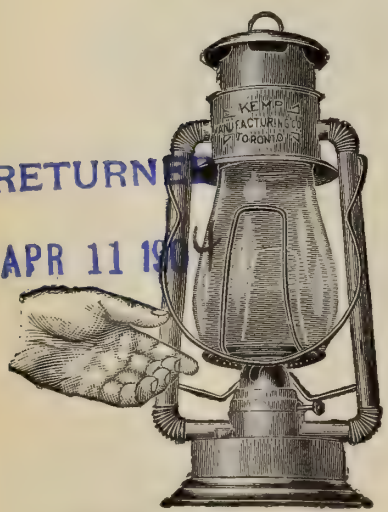
DIAMOND, GRANITE, PEARL, WHITE AND DECORATED

Enamelled Sheet Metal Wares.

Stamped and Pieced Tinware.
Sheet Steel and Galvanized Ware.
Patent Nestable Stove Pipes.
Stove Pipe Elbows.
Stove Board.
Coal Hods.
Dairy Utensils.

Nickel-Plated Copper Tea-Kettles.

KEMP'S WROUGHT STEEL SINKS.
Strong, Light and Durable.
Painted, Galvanized, Enamelled.



KEMP'S COLD BLAST LANTERNS.
Will not blow out.
A perfect, clear light guaranteed.

METALS

We always carry in **STOCK** and for **IMPORT** the following lines: **Galvanized, Black and Tinned Sheets, Canada Plate, Tin Plate, Sheet Copper, Zinc, Solder, Etc.**

Prompt Shipments a Specialty.

HARDWARE AND METAL

VOL. XVI. MONTREAL AND TORONTO, MARCH 19, 1904. NO. 12.

Does Canadian Preference Aid The British Exporter?

By D.O.M., Toronto.

FOR some time it has been the fashion with certain British manufacturers in the Canadian market to say that the rebate to British exporters of 33 1-3 per cent. from the Canadian tariff has been of little or no benefit.

Recognizing the extent to which sophistry takes the place of detailed information in the views of British as well as of Canadian politicians, no attempt has been made to refute these statements. But when a reputable and generally well-informed paper like the Iron and Steel Trades Review expresses such a conviction as we quoted in detail last week, and the crux of which we again reproduce, it is surely time to draw attention to the facts as they apply to the metals and hardware lines.

The Iron and Steel Trades Review's conclusion was :

> We believe it to be a fact that neither the rebate of 25 per cent. arranged in 1897 nor the increase to 33 1-3 per cent. in 1901 has been of the slightest benefit to British trade with Canada. It is true that our exports to Canada have been increasing since 1897, but it is true, in spite of the rebate, the commercial nations who are our competitors have made relatively greater progress in the Canadian market.

Is this conclusion justified by the facts? First let us consider the conditions existing when the preferential tariff was proposed. For years the aggregate of British exports to Canada had declined, while the exports from the United States to this country had steadily increased. There was throughout the Dominion a strong sentiment in favor of closer relations with the Mother Country.

It was hoped that the preference given British manufacturers in the Canadian market would have three effects—(a) stop the decline in British exports to Canada and possibly cause a reaction; (b) bring about closer relations between the Mother Country and Canada; (c) advertise Canada in Great Britain, where, it was felt, altogether too little was known of this country.

Of the latter two purposes nothing need be said here except that in these respects greater success than has been attained could hardly have been expected.

The first intention of the preference must concern our attention. In a general way let us first compare the total imports from Great Britain and from the United States in the following years :

	Great Britain.	United States.
1873	$68,522,766	$47,735,678
1883	52,056 465	56 032,313
1893	43,148,413	58 221,976
1894	38,717,267	53,034,100
1895	31,131,737	54,634,521
1896	32,979 742	58,574,024
1897	29,412,188	61,649,041
1898	32 500,917	78 70:,590
1899	37,060,123	93,007,166
1900	44,789,730	109 844,378
1901	43 018 154	110,4°5,008
1902	49 206,062	120,814,750
1903	58,896,901	137,605,195

The significance of the above statement, taken from the Canadian Trade and Navigation returns, lies in the proof that from 1873 to 1897 British exports to Canada fell from $68,522,766 to $29,412,188, while the exports from the United States to Canada in the same period rose from $47,735,678 to $61,649,041, yet during the six years ending with June, 1903, the British exports to Canada had more than doubled the volume of 1897—the proportion of increase being practically the same as the increase in Canadaian imports from the United States.

Not only was the decline in British trade to Canada checked by the preference but the increase of business has been brought to a proportion equal to the growth of U. S. exports to Canada!

So much for the general effect of the preference. It will probably be interesting to study the effect of the preference on hardware and metal lines.

For convenience let us compare the imports from Great Britain in the years 1893, 1898 and 1903 :

	1893			1898			1903		
	Great Britain.	Total Imports.	Proportion of British to total.	Great Britain.	Total Imports.	Proportion of British to total.	Great Britain.	Total Imports.	Proportion of British to total.

Tinware, plain, japanned, etc.	4,658	31,899	11.12	4,658	31,899	11.12	14 515	124,206	11.68

Even a casual examination of this statement will demonstrate the benefit of the preference in particular articles as well as in the aggregate trade. "In almost every article on the list the proportion of the total imports which came from Great Britain was smaller in 1898 than in 1893 : in other words British manufacturers of three-quarters of the articles specified above were during these five years losing ground in comparison with their competitors, notably Germany and the United States."

In bicycles, etc., while the entire imports were in 1898 more than four times what they were in 1893, the shipments from Great Britain were in the later year less than one-tenth the volume of the former.

British sales of cement were in the five years reduced by nearly half while those from other countries increased.

In electro plated and gilt ware Great Britain did 27 per cent. of the business in 1893, and only 12 per cent. in 1898; in gunpowder the British percentage fell from 68 per cent. to 12 per cent.; in cartridge cases from 47 per cent. to 23 per cent.; in bar iron or steel bars, from 79 per cent. to 13 per cent.; in cast iron pipe from 89 per cent. to 15 per cent.; in Canada plates from 95 per per cent. to 79 per cent., and so on down the list.

In pig iron Britain sold Canada $346,909 in 1893, but only $51,236 in 1898, the proportion of the whole being 51 per cent. in 1893 and only 13 per cent. in 1898.

In pumps Great Britain got 92 per cent. of the trade in 1893 and 39 per cent. in 1898. In fish and tie plates her share was 99 per cent. in 1893 and 5 per cent. in 1898.

In another big line, iron or steel scrap, a falling off from 87 per cent. in 1893 to 14 per cent. in 1898 is shown. In the minor lines much the same condition is observable.

Now turn to the figures for 1903. "At once it is seen that in the majority of lines the Mother Country has to a large extent won back her share of Canadian business."

A general increase in both amount and proportion is shown in brass and copper lines. Her share of the bicycle business, while still small as compared with 1893, shows a gain over 1898. In electro plated ware her sales have increased from $19,716 to $44,717, and her share from 12 per cent. to 16 per cent.

In gunpowder much of the ground lost in five years previous to 1898 has been regained, her share rising from 11 per cent. to 41 per cent., while in cartridges her sales rose from $8,163 in 1898 to $104,749 in 1903, and her share from 9 per cent. to 44 per cent.

In bar iron, etc., the same conditions are manifest her share of 13 per cent. in 1898 growing to 41 per cent. in 1903, and her sales from $48,722 to $544,861

In Canada plates Great Britain's share, which had fallen from 95 per cent. in 1893 to 79 per cent. in 1898, was increased in 1903 to 83 per cent., her sales in this line being $1,362,973 in the last year.

In iron or steel ingots a drop from 70 per cent. in 1893 to 34 per cent. in 1898 was turned to a rise to 63 per cent. in 1903, the sales increasing from $42,463 to $239,950.

In pig iron the Mother Country sold $51,236, or 13 per cent. of the total, in 1898; in 1903 she sold $836,555. o per cent. of the total. In iron or steel scrap, etc., her sales rose from $77,397 to $487,709 and her share from 14 per cent. to 72 per cent.

In other lines results are seen to be much the same, though it is admittedly the fact that in many lines of finished articles such as locks, stoves, builders' hardware, guns, rifles, etc., bells, gongs, etc., American manufacturers are becoming more and more aggressive in their advertising, in their canvassing for business, in short, in their attempts to get a share of the Canadian market.

"The outstanding fact made clear by the statement published above is, however, that despite the greater proximity and aggressiveness of their competitors, the Canadian preference, the rebate of 33 1-3 per cent. from the Canadian tariff has enabled the British manufacturer of many hardware and metal lines to hold trade in this country which he was rapidly losing."

The question is a wide one and a fuller discussion of the question would probably be in the interests of all concerned.

THE GEM SAFETY RAZOR.

THE great desideratum of a safety razor is the assurance that no matter how inexperienced a shaver may be he can shave with ease and comfort without any possibility of cutting himself. A good quality of cutting steel is also essential in the blades. Owing to meeting in their entirety these conditions the "Gem" safety razor has won an enviable reputation and has attained a remarkable sale in Canada. Hardware dealers, as a rule, carry this razor in stock but if any of the trade are not acquainted with its merits they are invited to write for full information. If advertising literature is desired to influence possible customers mention the fact. Attention is directed to the firm's advertisement on another page.

A WATCH CHARM FOR MECHANICS

The Davison Mfg. Co. are offering the trade through Rice Lewis & Son, Toronto, a miniature machinists' hammer and a miniature wrench which makes a watch charm which should be popular with mechanics. The wrench is a particularly attractive model, every working part being complete and the operation of the wrench being exactly similar and just as easy and effective as in the large wrench. See the advertisement of the Davison Mfg. Co. on another page.

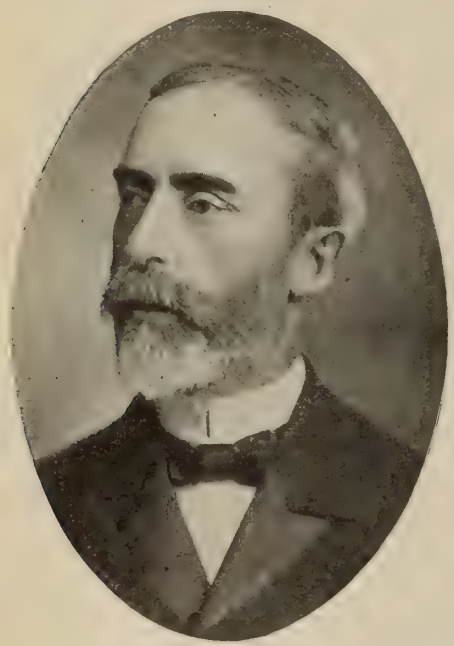
REPRESENTATIVE CANADIAN BUSINESS MEN

Horace Haszard, M.P.

IN Horace Haszard, M. P., for Charlottetown, P. E. I., the number of business men in the Dominion Parliament was augmented by a valuable acquisition by a man who, when he has "learned the ropes," will exert a progressive, businesslike influence in his party councils and should be a factor in the decisions of the Parliament.

Mr. Haszard was born in Charlottetown in 1853, being the descendant of one of the staunchest Loyalists who settled in Prince Edward Island in 1786. His education was acquired in Charlottetown and at the age of twenty he went



Horace Haszard, M.P.

to Montreal where for several years he enjoyed the advantage of a training as clerk with S. Greenshields, Son & Co. Returning to Charlottetown in 1875, he started in business as broker and insurance, commission and manufacturers' agent. His business has been conducted with the quantity of energy and resourcefulness which ensures success, and for several years he has been recognized as one of the forceful business men of Prince Edward Island.

The public career of Mr. Haszard had its beginning in his election as a member of the city council in 1885. He was twice elected to that office. Among the improvements credited to his energy are procuring direct steamship communication with Great Britain and in the improvement of the telegraph service of Prince Edward Island.

Mr. William Smaill.

MR. WILLIAM SMAILL, secretary-treasurer and managing director of the Canada Horse Nail Company, Montreal, has been identified with the hardware and allied branches of trade in that city since the year 1861, a period of 43 years.

Born in St. Catharines, Ont., in the year 1847, he is, therefore nearly 57 years of age. At an early age he was removed to Buffalo, N.Y., where he received his education in the public school and business college of that city. Removing to Montreal in the year 1861 he entered the employment of James Walker & Co., retail hardware merchant, with whom he remained for four years and obtained a thorough grounding in the details of the business from one of the best posted men in the trade, as Mr. Walker was believed to be in those days.

In 1866 Mr. Smaill made a change from the retail to the wholesale trade by becoming an employe of Crathern & Caverhill, the wholesale hardware and metal merchants. Here he remained for 11 years, the last four of which being occupied as their travelling representative in Ontario west of Montreal. The next step was an important advance to the position of manager and buyer for the wholesale hardware firm of Morland, Watson & Co., the liquidation of whose business four years later necessitated another change, which brought him into the service of Frothingham & Workman where he remained in an important capacity for the ensuing three years, when having received a flattering proposal in 1882 from B. & S. H. Thompson, of Birmingham and Montreal to visit Australia and New Zealand in their behalf he accepted same, and entered their service for the ensuing four years. In this capacity Mr. Smaill travelled through the hardware manufacturing districts of England and Scotland and nearly every leading city in the Australasia colonies, covering an interval of time for the latter of over a year and a distance in miles travelled of over 40,000.

From 1886 to 1894 inclusive Mr. Smaill was engaged in business in his own account as manufacturers' agent representing several well known firms in Great Britain and also on several occasions as secretary of several of the most important trade associations, such as the cut nail, white lead, horse nail, etc.

Mr William Smaill.

In December, 1894 he was offered and entered upon the work in which he has been engaged since that date, the management of the old established business of the Canada Horse Nail Company, with whose trade mark, the letter "C," our readers are made familiar with through the advertising columns of this paper, and the well known high quality of the nails it represents.

Mr. Smaill was married in 1869 and is the father of nine children, seven of whom are alive, and also has four grandchildren.

JAPAN IN THE TWENTIETH CENTURY.

PROBABLY the most significant fact in the history of the latter half of the nineteenth century has been the rapid rise of Japan to a leading position in the comity of nations. In the short space of little more than a generation she has brought herself from conditions of feudalism to a strong position of consolidated military power, able and determined to make her influence felt among the nations of the world, especially in all matters affecting Far Eastern policy. Although the advance achieved by Japan is much talked of, it is certainly a fact that the real measure of her attainments is not really fully realized. This probably arises from the fact that no connected account has yet been published which indicates all the lines of progress made by Japan. Numerous articles, dealing with special aspects, have appeared, but they are disconnected, and few readers are sufficiently interested in the subject to attempt to co-ordinate the various activities into a complete picture of national life, while the books which have been published about Japan have for the most part been superficial and imperfect.

The want has been supplied to certain extent by the publication of a compilation by Mr. Haruki Yamawaki, the private secretary to the Minister of Agriculture and Commerce, which, while making no pretence to literary grace, is a perfect mine of statistics and exact information regarding the developments of the various departments of Government.

After an introductory section dealing with the geography, the population, the administrative system, and the land as an institution, Mr. Yamawaki gives very full information of what he fitly calls the primary industries, beginning with agriculture. The Japanese recognize the importance of this, the oldest of the industries, and have been doing all in their power to develop it, so that the produce of the land may keep abreast with the increase of population. That increase is at the rate of almost half-a-million a year, and with normal crops the improvements which have been made in the methods of cultivation and the additional land which has been taken in have almost made the produce sufficient for the wants of the people, and only in years of bad harvests, rice and other forms of food have to be imported.

The efforts which have been made by the Japanese Government for the improvement of agriculture afford in some directions object lessons to the Indian Government. Colleges, schools, experimental stations, and a large number of special institutions have been organized, not only for the ordinary departments of agriculture, but also for the production of tea and silk, stock-breeding, dairy-farming, poultry-rearing, bee-keeping, and other subsidiary rural industries.

Great attention has also been paid to the fisheries of Japan, rice and fish being the staples of the ordinary food. The development of manufacturing industry and the need of wood for purposes of construction has stimulated attention to forestry. For some time after the restoration of the Emperor to power the forests were cut down in a very reckless manner, but now care is taken to develop to the full their natural capabilities by increasing their productive powers by the application of technical methods.

Considerable developments have taken place in mining, and gold, silver, lead, copper and iron ores are extracted to a fair amount. Coal mining, however, has attained the most importance, and Japanese coals are now used, to a large extent, by the steamships frequenting Eastern seas. The methods of metallurgy have been improved, and a large steel works has been laid down in the south of Japan, which is intended to supply the materials required for shipbuilding and engineering purposes. For some time past operations have been at a standstill on account of financial difficulties, the cost of the works having largely exceeded the estimates, but no doubt, in time, these will be removed.

When we turn to manufacturing industries, we find the greatest developments. Not only are the old Japanese industries greatly extended, but many new ones have been introduced. It has sometimes been said that Japan is being transformed from an agricultural to an industrial country. It would be more correct to say that manufacturing industry is being added to agriculture. Not only are the wants of the Japanese themselves being largely supplied, but manufactured goods now form a very important part of the export trade of Japan. Taking the year 1900, we find that the export trade consisted of the following kinds of goods to the amounts given :

Industrial	74,788,770
Agricultural	73,336,835
Fishery	5,902,623
Mining	27,459,979
Miscellaneous	12,324,339
Total	192,812,546 yen

A glance over the list of manufactured goods exported shows that it includes a very large variety. Cotton yarns figure in 1900 to the amount of 20,589,263 yen, which means that in addition to supplying the greater part of their own wants, the Japanese were able to send large quantities of yarn to China and Korea. They have, indeed, been able practically to stop the trade in Indian yarns with China. They are also beginning to export cotton cloths of various kinds.

The export of manufactured goods, however, gives a very imperfect idea of the development of manufacturing industry which has taken place in Japan, for a large part of the products are used in the country. Mr. Yamawaki gives very elaborate statistics. The list is headed by woven goods, of the total value of 170 million yen, followed by sake with 100 million yen, cotton yarns with 70 million yen, soy with 23 million yen, and paper with 20 million yen. Other commodities worth mentioning are sugar, earthenware, matches, lacquered ware, ships and boats, machines of all sorts, cement, glassware, fancy matting, straw plait, umbrellas, bronze and copper ware.

The number of manufacturing companies in 1900 was 2,554, with an aggregate capital of 216,766,903 yen, and a paid-up capital of 158,851,730 yen. The number of workshops with motors was 2,763, and without motors, 3,788. The list of industries shows that all the more important Western industries have been introduced into Japan, and the most of them seem to be in a flourishing condition.

In general, the working hours of the operatives are 12 hours a day, but sometimes they extend as long as 16 or 17 hours. The rate of wages is about 30 sen a day for adult males employed in filatures, cotton mills and weaving shops, while that of females is about 20 sen. In machine shops and shipbuilding yards the rate is usually 50 or 60 sen per day, and a skilled artisan gets more than 1 yen. In match factories, on the other hand, the rate is much lower, being 12 to 20 sen for ordinary female operatives, and 5 to 13 sen for little girls. In tobacco factories and printing shops ordinary females get about 20 sen and males about 40 to 50 sen. (Note 1 yen equals about 2s., equals 100 sen.)

Very complete arrangements have been made for every department of industrial education, from the engineering colleges of the universities of Tokyo and Kyoto to technical schools of all kinds and grades suitable to the requirements of the most important industries.

In 1873 there were 18 miles in existence in Japan, now there are over 4,000 miles in working order, and a considerable addition under construction. In 1901 the Japanese mercantile marine consisted of 1,395 steamers with a tonnage of 583,532, and 4,020 sailing ships with a tonnage of 336,436, besides nearly 20,000 junks. Shipbuilding is making considerable progress, and the yard in Nagasaki now turns out vessels of 6,000 tons, which are thoroughly efficient.

Progressive Hardware Retailing

Some Hints and Suggestions About Running the Business

Before Starting in Business.

AN old proverb has it, "Care is an enemy to life." Knowing this, the person who thinks of taking upon himself the responsibility and worry of a hardware business, or, for that matter, of any other business, should sit down and seriously think out the probability of success and the risk of failure, writes "Auster" in Australian Hardware and Machinery. "Is it a suitable time for launching out?" he must ask himself; or, if he is already employed at a good wage, "Is it wise to give up a certainty for the privilege of being my own master?" Everybody wishes to be that. It is gratifying to see your name in gold letters over the door of your own shop, and have your business advertised in the newspaper. It is good to be on "your own" when things are going smoothly and trade is brisk. But when bad times come, when custom falls off and capital skrinks up, you may perhaps think with a sigh of the time you were working for wages, when your mind was free from care, and you finished work for the day when the clock pointed to six.

TRAINING ESSENTIAL.

Then, again, have you sufficient practical knowledge to carry you through the intricate maze of a hardware business? Have you been through the various departments and thoroughly familarized yourself with the details of each, or is your experience confined to one or two departments? Are you going to chance picking up the rest? The person who wishes to succeed in business must not risk to luck. All successful hardware businesses are built up by real hard work, prefaced by systematic training, which is only achieved by attentive study and careful thinking out of the seemingly small details met with every day. As a new starter you will find you have a difficult road to travel, and to be able to go through the journey with credit and success you must have a thorough knowledge of the principal branches of hardware. This varies according to the class of trade for which you propose to cater. We will assume that you are starting as a wholesale and retail ironmonger in one of our large cities. You are going to sell wholesale to other city ironmongers, while doing a retail trade with the body public. For this a thorough training is essential. All your previous life must have been devoted to the trade from your first day at work as an errand boy to your last position as manager of a department. You have passed through that anxious time when the broom was placed in your hands, and you receive your instructions about floor-sweeping, with a strict injunction "not to throw water over the goods." Later on you were initiated into the mysteries of weighing out nails, and during a rush you actually managed to serve a customer with a pick-handle or a trunk. You felt proud! By and by, you were perhaps put on to that loafing task known as town buying. What a delightfully easy time in some houses! It will never come again—not even when you are your own master. A fine opportunity, too, for the wideawake. Buying-in to fill up the orders of a large firm is an excellent training for a youth. He gets acquainted with nearly all branches, and cannot help seeing the different styles of doing business. If a youth takes careful note at this time he will be repaid a thousandfold in after life. But this is not all that is requisite for a thorough knowledge of the trade. If you intend to start as a retailer you must have an intimate knowledge of tools, especially carpenters', bricklayers', engineers', plumbers', moulders', turners', coopers' and carvers'. Five years would be profitably spent in the tool department. Then, if possible, the builders' department should be considered, especially brassfoundry in all its branches. This counter seems to be the place where all the main business is done. Here you meet the same customers day after day and year after year, and the training you get is marvellous, not only in your own business, but in carpentry, cabinet-making, building engineering, and many other trades. You must exercise your mind to adapt and suggest what you have in stock to your customer, and do your best from your own shelves or somebody else's to meet his wants. If you do so he will come to relv on your judgment and experience, and place himself largely in your hands. But if you are to be thus trained and trusted you must put your whole mind into your work.

The Retailer as an Educator.

IN this line one can say a great deal, as it is a question that there seems to be no end. But I should try and confine myself to the hardware merchant and his customers.

To be a successful merchant and educate your customers, that you have just what they want at the right price, you must first educate yourself not only to the every day needs of your customer but the higher class of goods that will satisfy him in regard to price as well as quality.

I have always found that only first-class goods will do this. I think it a good plan to vary stock but standard goods will catch by far the largest percentage of the people. When you have done this, you are ready to begin on your customers. You can do this by advertising in your newspaper, by handbills, personal letters and by constantly calling your customer's attention to the superior quality of the article you are selling.

Never advertise or quote prices which you are not willing to sell at. Strive to gain their confidence; let them know that they can rely on your word. When you have thus gained their confidence you can say I am a successful educator.

I think it a good plan to try and educate your customers to buy goods in advance, such as binding twine, fencing and other lines which you buy in advance. You can often do this by guaranteeing the price, same as a jobber or manufacturer does to you.

There is another point which I wish to call your attention to, that is, extending credits. I think you will all agree with me when I say we extend credits too long to be profitable. This can be obviated in a great measure by having a thorough understanding when you sell the goods as to the time you are willing to extend credits. If not paid promptly, call your customer's attention to the terms, either by statement or calling on them personally. I find it much easier to collect an account that has run only thirty or sixty days than one that is from one to two years old.

Do not think because I have called your attention to a few points which I think are right that every merchant can follow any line of procedure and not vary from it. Different localities and conditions call for a very different mode of doing business. Every merchant must meet the conditions of trade as they arise.

If something new in hardware is offered you, if it has merit, buy it, make special effort to get them in the hands of the people who have use for them. There is no higher type of advertising to my mind than having a lady drop in on her neighbor and see her using some household article and asks "Where did you get it?" "Why, of Findeisen Bros., and it is just what I have wanted; it's a new thing." The first lady makes up her mind she must have one of the same kind, and 99 times out of 100 she will go straight to Findeisen Bros. and get it.

It is often the case that a merchant that first introduces an article to the people sells more of them than all of his competitors. These points seem to me to be education in the retail hardware business.

CHARACTER A FACTOR IN BUSINESS

CHARACTER lies at the foundation of all individual and business success. It is the basic principle that underlies the social and the business world, and is the one thing that determines a man's value to society and the work in which he is engaged.

Of course, a man's physical and intellectual strength is to be considered, but that, after all, can be estimated only at the price of old bones and gristle and the elements composing them, valuable or invaluable as they may be !

Rene Bach, a scientist of some repute, says that the average man is composed of 96 pounds of water, 10 pounds of glue, 3 pounds of sugar, 3 pounds of albumen, 51 ounces of calcium, 2½ ounces of brimstone, and—a pinch of salt ! This surely would not bring much in the "open market," but to give the poor fellow his due we are still compelled to say that, according to this same scientist, he has also in him a foot cube of carbon or diamond in the rough (mustly rough) and represents a total approximate cash value of $18,300 !

I know that this will be a matter of news to most of you credit men who have found in the many sad, sad investigations that you are called upon to make that a good many men are not worth a cent ! I present this to you, however, as a scientific fact, and will leave you to fight it out with the scientist, suggesting only this in passing, that the next time one of your customers goes into a state of insolvency, you search amid the hard, insoluble debris of that wreck and ruin for the diamond, and leave the glue and brimstone for the other fellow !

Not in the price of glue, then, or of salt or sugar is man's value to be determined, nor even in the price of diamond in the rough. These are all transitory and ephemeral in their nature. The liquids will evaporate, the albumenoids, the salines and the carbons all will mingle at last with their native elements and all this value will then be lost.

Character, however, is eternal. It is the one permanent abiding element that gives value to a man, stability to society and trust and confidence and prosperity to business everywhere.

Horace Greeley, hard-headed business man that he was, struck the key-note of it all when he cried in that dying sentiment of his : "Fame is a vapor, Popularity an accident, Riches take wings, only one thing endures—that is Character."

"Character," says Emerson, that sage of American philosophy, "is more than Intellect. Goodness outshines Genius, even as the Sun makes the electric arc to cast its shadow;" while England's old blind poet, Milton, says : "There is nothing that makes men rich but that which they carry inside of them. Wealth is of the heart, not of the hand."

It is no mere sentiment, then, that I bring you to-night, but a hard, practical business proposition, attested to, not only by poets, but by philosophers and business men the world over as all unite in saying : "Character id Capital." It is something, therefore, to be treated as an investment, as capital stock, as an asset that can be counted on to yield the fullest and quickest returns as a man shall put it forth to do its work in the business world.

Character is a composite, not a concrete thing. It is built on no single foundation, but upon the foundation of all the virtues. It presents no one side abnormally developed with the others all dwarfed and shrunken, but is as symmetrical in its development as the crystal, its many sides and facets as regular as the diamond's, so that from whichever side you view it, you see it ia all its beauty and glory.

It is said of Hannibal, the great Carthagenian general, that whenever he sat before painter or sculptor for his portrait, he always had them make it in profile, so as to hide the blind side of his face. When the old Puritan, General Cromwell, however, was sitting for his picture before a noted artist and was asked to turn a little so as to hide a prominent wart and show the best side, he said, "No, paint me just as I am, full face, warts, wrinkles and all."

True character has no blind side. She never sits in profile. She is not ashamed to show her full face to the world, that all may know her lineaments. She courts the sunlight, fears no scrutiny and takes a righteous pride in all her symmetry and beauty.

The word character, in its Greek original, meant a mold or die—something that would make a uniform, accurate impression. It is thus, therefore, that the world has been transferred to our language and means in the moral sense a life that is uniform and symmetrical—one that is molded and farhioned according to high and noble ideals.

This is the kind of character that gives confidence and prosperity to business and society. This is the kind on which credit is based. This is the kind therefore that is the true source of the nation's and the individual's wealth, for without it man could not have confidence in his fellow man; lacking this, business would cease between them, the wheels of commerce would then also cease to turn and the individual and the nation go into a state of bankruptcy and ruin.

Character in business, then, means added capital in business. All value does not lie in that which can be handled, which can be measured by the yard or sold by the pound, nor is a man's wealth to be estimated by his bank book or the deeds in his strong box. Character is the most valuable thing a man's business standing which is the one thing that gives him success or failure will ever be measured by those heart forces and soul impulses that make a man honest and upright in all his dealings and set him forth before the world as a man of integrity and stainless honor.

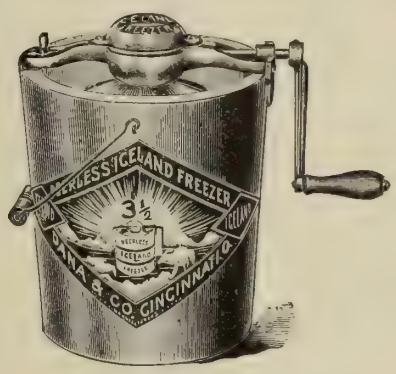
Character in business means, therefore, greater credit in business and this gives a capital that far exceeds bank accounts and stocks and bonds. Money is not the chief form of exchange in business. Credit is far oftener the legal tender than is the coin of the realm. The actual exchange of cash is rare in comparison with the acceptance of a man's credit in one form or another and that credit is always based upon his personal and business character.

Credit and character being thus so closely interwoven it is necessary for you as a Credit Men's Association to give very careful attention to it and base your judgments and actions on it day by day. In the philosophy of finance credit has always been looked upon as one of the forms of wealth, therefore, surely character upon which it is builded should be looked upon in the same way by all of us, and be as carefully guarded as our stocks and bonds or other forms of wealth.

I know you credit men, because of your new organization, are apt to think that you have struck a new idea, a modern invention, in the establishment af a Credit Men's Association founded thus upon character in business and society, but it, and the idea that this same character, or credit that is founded upon it, is one of the forms of wealth, are ideas as old as the hills, I was going to say, as old, at any rate, as old Demosthenes and he lived quite a while ago if I mistake not !

In his oration against Leptimes he says : "There being two kinds of wealth, money and general credit, the greater is credit and—we have it !" So apparently they had a Credit Men's Association in Athens at that time with,

TOY FREEZER.



THE PEERLESS ICELAND.
1-2-3-4-6-8-10-12 quarts.

HAND POWER PEERLESS.
16-20-25 quarts.

Everything in Freezers

Dealers need not look outside our line for anything they need in ice cream freezers. The

Peerless Iceland

is popular with dealers, because popular with the public, everybody knows the Peerless Iceland. We make all sizes, from the Toy up to 40 quart power. Those who want a good freezer at a price for a leader, should buy the Frezo. The Peerless Ice Chippers cut some ice in the trade, also.

Ask your jobber.

DANA & CO., = = Cincinnati, O.

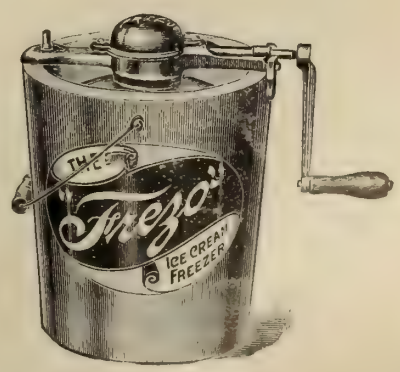
25 and 40 quarts.

PEERLESS ICE CHIPPER.



THE FREZO.
1-2-3-4-6-8-10-12 quarts.

perhaps, old Demosthenes himself as the president.

In another oration in behalf of Phormion he emphasizes still further the idea that credit based on character is the highest form of capital in the words: "If you were ignorant of this that credit is the greatest capital of all towards the acquisiton of wealth, you would be utterly ignorant."

Daniel De Foe is known to most of us only as the writer of Robinson Crusoe, but he also was a credit man in his day, and also held to this same theory that character and credit make capital and wealth for in a book of his entitled "The Complete English Tradesman," he says: "Credit is so much a tradesman's blessing that it is the choicest ware in which he deals. He cannot be too chary of it when he has it nor buy it too dear when he wants it. It is a stock to his warehouse. It is current money in his cash box." And Daniel Webster, our own great statesman, puts it still more strongly in a speech he made in the United States senate in 1834, when he said: "Credit is the vital air of modern commerce. It has done more, a thousand times, to enrich nations than all the mines in the world. It has excited labor, stimulated manufacture, pushed commerce over every sea and established national superiority on the foundation of intelligence, wealth and well-directed industry."

Are these words too strong? Look for answer to the definite statistics of last year as to what credit based upon character in business has done and you will find that though there were 9,[illegible] failures in the last twelve months, only 2.8 per cent. of them were due to unwise credits or the failure of business character and integrity. That though these failures were for a sum total of $105,489,530, only $6,247,979 were due to the betrayal of character or credit.

Here is a capital then that seldom fails to meet all its liabilities. It can always pay its debts and takes a pride in meeting all its obligations at maturity. It is the sceptre of business, the throne of commerce and the crown of manhood. Without character there can be no credit and without credit the business world would fail to-morrow.

Time was, perhaps, when there was but little attention given to character in business, but that time is gone and gone forever. Time was when a travelling salesman scarce expected to make a sale unless he took his customer to a grogshop and treated him generously, sometimes generously enough to make him drunk, especially when the salesman knew he had a line that no man would buy unless he was drunk! That time, however, has also gone, except for those who carry lines that they cannot sell under any other condition, and they, we rejoice to say, are changing their lines, and also their methods as fast as possible!

Time was when railroad corporations, big insurance companies, great mercantile establishments enquired little into the private or public character of their employees. A man might drink or gamble or lead a fast life of any kind without much question as long as he attended to his business duties with promptness and despatch. Now, however, the railroad, insurance, trust and banking companies, together with mercantile companies of every kind, are demanding of their employees a high grade of moral character, and that, too, not on moral grounds merely, but because they find that character is the greatest investment they can make in their business both on the part of themselves and their employes.

One thing, however, I believe it is necessary for us all to have in mind, and that is that it will not do for us to admire a virtue in others that we do not try to cultivate ourselves. There are still some I am afraid that are ready to put all their moral obligations on somebody else and demand of others that which they are not ready to live up to themselves.

Many of you have doubtless heard the story of the man who failed in business and met his pastor just after he been closed up. The minister noticed that the man was looking rather glum and so he said: "What's the matter, John? You don't look very well this morning." And the man replied: "Ah, pastor, I have had a very hard blow. I have just made an assignment and my business and stock with what little property I had is all gone. I have turned every thing over to my creditors and I have nothing left now but my religion, but, praise the Lord, I am holding on to that." Well, the minister thought that was a beautiful sentiment and so he said: "Praise the Lord," too, and after saying some words of encouragement and sympathy to him he went on down the street. A little farther down he met another member of his congregation and he told him of Brother John's failure. "He says he has lost everything but his religion," the minister said, "but he says he is still holding on to that." "Ah," the other man replied, "but he would not have that left either only that he put it in his wife's name."

We are all apt, at times at least, to want to put these higher moral obligations and the more exacting demands of character in somebody's else name, but we must remember that character is not transferable, nor, indeed, if it were so, would it then be exempt? Wh employer demands of the employe, he must be ready to exemplify himself. What the seller demands of the buyer the buyer in turn demands of the seller. There must be reciprocity of action or else character and credit will both fail.

These principles have already put a new life and spirit into the business world. Men are no longer arrayed against each other, but are anxious to help each other as far as they can consistently do so. Trade is no longer arrayed against trade or competing lines of business against each other, but there is a feeling of fraternity and good fellowship being manifested that has never been shown before, a feeling that these Credit Men's Associations are largely responsibly for. Now, there is not so much the attempt to get one good customer away from a competitor by underhand methods or the effort to "unload" a bad customer on some other unsuspecting house, but a mutual desire to do as much as possible for each other consistent with business interests.

Buyer and seller, debtor and creditor, the trade and the public, are all gaining more confidence in each other, and a man's affirmation backed by his known character for honesty and integrity is taken now as readily as the coin of the realm.

Out of the darkness of distrust and blind-eyed jealousy the business world is emerging to a newer and brighter day. The sky is roseate with the promise of a noonday of splendor. Along the world's horizon line I see the sun of prosperity rising larger than ever it has risen before, and looming large on that same horizon line I see the business man, majestic in outline, Titanic in power, sublime in the full confidence of that which is to be. Before him stands the waiting world, with all of its treasure-stores of farm and factory, store and office, stocks and bonds, and every kind of wealth that man holds dear. He stands before it all with neither gold nor silver in his hands to buy it, but written large around him, and above him and upon him, I see that one word "CHARACTER"—and that is signature enought to draw all the treasures the old world holds. He pauses thus a moment, and then I see him raise his hand to heaven in solemn affirmation, and forth from his lips there comes, in a tone as the sound of many waters, that fiat of an honest, upright soul: "I will." At that fiat the treasure-houses of the world are unlocked, and all of the bounties of the farm and forge, of the shop and store and office, of factory and field and busy mart of trade are poured forth unstintingly upon him.

And now in his place I see upon the same horizon line a throng of those whom no man can number, from every rank and condition of society. They are those who wark and think and act out their parts in the busy drama or tragedy of life, and reach forth their hands from day to day for the creature comforts of this life which are necessary for their sustenance. Through mutual trust and confidence they work for their employers without asking at the end of each hour and day the wages that are due them, and they stand on that world's horizon line before the business men and ask the same trust and confidence on their part. They also bring not gold nor silver in their hands, but in the faces of those who knew true manhood there is stamped the impress of a noble, upright character that is its own credential everywhere. These also lift their hands to heaven in that same solemn affirmation, and forth from their lips I hear that same fiat sounding: "I will," and forthwith into their hands is poured all they ask for, and more besides—a mutual honor and respect that will last as long as character remains!

Like the fiat of God in the beginning which brought cosmos out of chaos, and order from disorder, so this solemn affirmation and fiat of man will bring cosmos out of the chaos of the business world, and order from its disorder. It is the pledge and promise for the future which character makes, and by its divine Omnipotence it will, as God did in the beginning bring light out of darkness, life out of death, and in the firmament of the financial world cause the sun of prosperity to arise and shine in all its glory throughout our little day, until the evening shall come and the credit slips be all passed in and every heart shall wait with a confidence based upon an upright character the reckoning which God shall hold with every soul.

The Merchant And The Local Paper.*

COMPETITION from the outside is daily making more necessary co-operation between the local merchants and the local press.

There are too many merchants who lack appreciation of the value of good newspapers and there are too many editors who do not attend to business. For that reason there are many newspapers not worthy of patronage. But wherever the local merchants and the editor faithfully co-operate there you will find a good trading point.

The merchant should patronize a newspaper for purely business reasons. His personal relations with the editor, no matter whether pleasant or disagreeable, should not be taken into consideration. The merchant should demand that the editor publish a good paper and circulate it as much as possible in all of the territory in which the town has a fighting chance for trade.

COMPETITION OF THREE KINDS.

The local merchant experiences three kinds of competition :

1. Competition among merchants of the same town.
2. Competition between towns for the trade of a certain district.
3. Competition from the big center.

NARROW VIEWS.

The view of some merchants is so narrow and restricted that the only competitor they can see is the fellow down the street. A town with such merchants is poorly armed to fight its trade battles. Usually where the merchants do not agree the town badly disagrees.

Other merchants have a broader idea of competition. They see that the more business brought to a town the more prosperous are all of the merchants. They realize that when they disagree with the fellow down the street, they are dividing a business community, and that gives the competing town its chance. It has been the theory of some that quarreling business men draw more trade to the town because of badly demoralized prices. Even granting that to be true it will be conceded that such a condition is not to be compared as a volume builder with a united business community making its intelligent offer of bargains systematically. One accidentally brings in a few extra customers by sending profits to perdition. The other goes after more trade on a carefully devised plan, one that is effective.

But beyond all this is the competition from the big city. More centralization of the retail trade is one result of the development of the country.

THE CITY DAILY AND TRADE CENTRALIZATION.

The city daily is a big factor in this tendency toward trade centralization. It is the ally of the mail order house and the big city department store. The farmer's wife reads the ads—of course, and as a result of making the farmer a steady subscriber to some metropolitan daily the business of the mail order department in the big city department stores is increasing rapidly.

This is so much trade taken from the small towns. The local merchant does not see it go. If he did he might head much of it off by proving to the purchaser that the home stores sell just as good goods just as cheaply. But the mail order from the farm is gone and back again before the local merchant learns what has happened and many times he has no idea of the large amount of business going to the big centers from people whose trade he would be glad to get.

NEED OF CO-OPERATION.

Rural free delivery is giving the local merchant an entirely new reason for co-operating with his fellow merchants and the editor to keep the trade at home. Every twenty-four hours the city daily comes with its talk of city bargains. The small town and the local merchants need a newspaper ally to offset this.

The experience of merchants during the past ten years has shown that the fight to hold the trade at home grows harder each year. It is not always a question of prices, nor yet that oft-repeated argument of a "larger variety to select from." New competition always necessitates more effort. The simple fact that avenues have been opened whereby outside concerns can reach the local trade surrounding each town more easily than ever before, and outside concerns are taking advantage of it, makes the fight of the country merchant and the small town that much harder.

RELATIONS OF MERCHANT AND EDITOR.

That there are too many merchants who fail to appreciate a good newspaper when they have it is plain. That can be seen by looking over the columns of scores of bright Northwestern newspapers. The number of merchants not represented in their columns is too large.

On the other hand there are too many poor newspapers, sheets really not entitled to patronage. The editor may know little about the newspaper business as a business. He may be a fairly good printer, but a poor business man. He may be a fairly good business man, but a very poor editor. Again, he may be a good editor, a good business man, and a good printer, but he allows the devil to run the office while he is looking after the politics of the county or smoking cigars with fellows who imagine they are slatemakers in state politics.

TWO IMPORTANT QUESTIONS.

When a merchant realizes the necessity of a first-class local paper to him in his business, he will probably ask himself this question :

"What can I and other merchants of this town do to make this paper more effective for the general trade interests of the town ?"

The editor should be constantly asking himself : "What can I do to make the paper a better advertising medium ?"

When the merchants and the editor of any one town get down to answering these questions all of them have started on the road to more business.

It would seem unnecessary to tell merchants they should work together for the good of the town. All of them believe in it as a principle, but when it comes to putting the thing into practice their hatred of the fellow down the street often handicaps the work and in the end actually damages the general trade interests of the town. Co-operation among the merchants of a town is the first essential. If they can agree on nothing else they ought to agree that more trade for the town is what they want and they can afford to lay aside their prejudices for a time and all pull together as a business proposition.

The organizations of merchants into associations has overcome much of this petty prejudice. Competitors meet face to face and shake hands now where in some instances not many years ago they were sending each other messages of bad will by the grapevine route, a route superintended by some customer who had a financial interest in keeping up hostilities. The trade association proves to each merchant that his competitor is not such a bad fellow after all, that there is really some good in him and that he can pull with him for the general good of the town without losing any of his self-respect.

*Address by W. E. Davis, before the North Dakota Hardware Association.

CO-OPERATION MAKES GOOD TOWNS.

There are many towns where the merchants do co-operate. They are marked towns. They are known in their particular sections for the harmony and hustle of their business men. That in itself is good advertising. It makes business. Every man in them is talking for his town. He is praising its stores, the big stocks carried, and the enterprise of the merchants. If he goes to a neighboring town he is "plugging" for the home merchants. The enthusiasm is in the air.

To create such enthusiasm lies in the power of the merchants of any town. They represent its heaviest interests. Eliminate the merchants' quarrels and put harmony at work instead and you will have a far different community. Other factors in the town may clash but they will not retard its progress materially. The competing lawyers may be at war, but lawyers' wars usually dissolve into wind. The jealousies of doctors amount to little more than gossip unless all of them are in politics. But the merchants represent the commercial activity of the community. Whether that activity is being driven by harmony's powerful engine or simply pushed by individual concerns working independently depends upon the merchants themselves. There is a big difference in the results to all between the work of harmony's big engine and the unassisted efforts of the individual.

When the merchants of a town have fully realized the necessity of harmonious work against the outside assaults on their trade they will take their local editor and his paper into full partnership. They will want to see it the best local paper in the county for two reasons :

First, because a large number of people will base their opinion of the town on the appearance of the local paper.

Second, when any business man buys advertising he wants the best article he can get. He wants to advertise in a medium that circulates as widely as possible in the territory he desires to reach.

THE EDITOR.

That brings us to the editor.

Frequently he is a mistake.

Usually he regards his business as something else than a business. He forgets that it needs close attention every day, that it must be pushed in all departments and kept in good shape in every detail.

Wherever you find a newspaper editor who works at his business with a system and sense a business man should, you will find a good newspaper.

The curse of many towns is too many newspapers. When you have one good newspaper stick to it and discourage efforts to start another. You may be hot at the editor and actually rubbing your hands in anticipation of seeing him defeated in the next election, but forget that for a while and think of business. What does it matter if you and the editor disagreed in the last school election, if by working with that same editor, patronizing his paper, and helping him work for the general interests of the town you are increasing your profits by a few hundred dollars. Differences of opinion in every community are constantly flashing up and fading away, but opportunities for making money once gone never return. You are a business man. Make the most of your opportunities. If two newspapers is a poor business proposition for you and your town, put your foot down on it and endeavor to persuade the other merchants, as a business proposition, remember, that one paper is enough. Put two papers in a one-paper town and one of them will be a poor medium for your ad. The circulation of one good paper can be pushed successfully. You get more for your money. Every merchant who patronizes two papers in a town where there should be but one is actually losing a part of his advertising appropriation.

THE EDITOR'S DUTY.

But to take the town which has the right number of newspapers, whether it be one or two, what is the editor doing on circulation, and the general excellence of his paper ? That expresses the duty of the editor to his advertisers.

During 1903 we addressed inquiries to several hundred northwestern merchants on advertising, asking them which in their opinion was the best medium for them, the local paper or the circular mailed direct from the store. A big majority declared in favor of the circular. Many went so far as to declare they received no results from the local paper at all.

Why is this ?

A large number of newspaper publishers are not giving their papers intelligent attention.

To be successful as a business institution a newspaper must be wide awake on local and county news, and the editor must push the circulation to the farthest possible limit. He cannot get the circulation unless he gets the news. He is not entitled to the merchant's advertising unless the paper has the circulation.

WHERE THE EDITOR FALLS DOWN.

One reason so many merchants lack faith in the value of their local newspapers as advertising mediums is that the editor does no aggressive or progressive work on the circulation. That type of editor is content to go along year after year with the same circulation in about the same district which is usually the territory from which the town naturally draws its trade. An advertisement placed in such a paper reaches only the people who are in the habit of visiting that store more or less anyway and unless the merchant is advertising something remarkably low the ad frequently brings very little response. The local merchant is ambitious to reach into a wider territory. He wants to get his advertisement into the district from which a certain competing town is pulling a large trade or into that other district where he hears a large number of catalogues from supply houses has been received. Unless the editor has covered this ground with his circulation the advertisement is disappointing in this important particular.

PUSHING CIRCULATION.

Right here can be seen some of the work cut out for the editor who wants to carry his business to the farthest limit of his opportunities and who is ambitious to make his paper of value to the town and its merchants. He must have in his mind the territory into which he desires to push his paper and he must be devising ways and means of doing it. If the people of the Northwest district are trading in another town or buying considerable goods of supply houses can he do anything to stop it ? Do they read his paper ? Do they use his town for a market and if not why not ? If the merchants of his town are paying as much for produce and selling goods as cheaply as any other, why should they not get the business ? The newspaper can do much to attract people to the town. It should have a correspondent in all districts where the town meets others in the battle for trade. Its circulation in those districts should be pushed as much as possible. When he has done that the editor has done much to interest the people of that community in his town. He deserves material support from the merchants for such work. The weekly papers of North Dakota which have given proper attention to their circulation are of course the most successful. Adding circulation is putting betterments into the property, but there is an astonishingly large number of editors who fail to realize the value and necessity of those betterments.

ROOM FOR CONCESSIONS ON BOTH SIDES.

The editor criticises the merchant who does not advertise. The merchant in turn says it does not pay. There is

plenty of room for concessions and more enterprise from each. There will be some merchants who will not advertise until competition drives them out of business. There will be poor newspapers forever and forever because poor newspapers are the hardest things in the world to kill off. But between those two extremes there is a splendid chance for reasonable merchants and reasonable editors to get closer together as business men working for their bank accounts and the general good of the town. The merchants have the right to demand a good newspaper run by an editor who is sending its circulation as far into the territory of neighboring towns as he can. The editor in turn has a right to ask good rates for his ads and liberal patronage. The town whose merchants and editor get together on such a basis will be the best trading point in its section and will keep most of its trade at home. That will be one town which will successfully resist the invasion of the concerns in the big cities. The other where the business men lack enterprise and reason is bound to suffer.

CURLEY'S IDEAL SAFETY RAZOR.

THE use of safety razors is one of the developments of the age that the hardware trade must take cognizance of. It is the fact that many men do not shave themselves because they have never reached the point of being able to do so in comfort and without danger.

The loss of time and the large expense involved by having shaving done by the barber has made a big demand for the razor which ensures the greatest comfort and safety in shaving.

For this reason it is not surprising that J. Curley & Brother, 6 Warren street, New York City, have found a ready market for their "Curley's Ideal Safety Razor." It is claimed that one cannot cut themselves by this razor because the guard is so attached to the razor as to prevent cutting the face, and also allows the razor to be pulled diagonally from point to point, which has been claimed for over a thousand years to be the correct way of shaving. It can be used with or without a guard. It is not intended merely for the inexperienced, but especially for those who think they know how to shave. J. Curley & Bro. are aggressive business men and to substantiate their claims they offer 30 days' trial. Hardware dealers who have not seen this razor are invited to write direct to the firm for full information regarding it and the price at which it is offered to the trade, mentioning this paper.

FIVE YEARS' GOOD PROGRESS.

"STRICT attention to business, judicious display of goods, and a liberal use of printers' ink have been the factors in making R. J. Walkem, Tottenham, Ont., a successful hardware dealer."

The above emphatic statement was made a few weeks ago by a shrewd

R. J. Walkem.

traveller. Mr. Walkem is a comparatively young business man. In March, 1898, he purchased from Wm. White a small hardware business, then conducted in a small shop, the entire stock consisting of $900. The shop boasted one window and one short counter, the business had been neglected and was almost dead.

In the face of strong opposition Mr. Walkem set to work to make the place as attractive as possible. By carefully

R. J. Walkem's Store.

studying the needs of the community and introducing method in buying he had the pleasing satisfaction at his first stock taking to find that his practice had overcome the evil of being loaded with unsaleable merchandise or dead stock.

From the outset he became a close student of the fluctuations of the trade, and from his inception has never missed an opportunity to profit by the information gleaned from the columns of Hardware and Metal, and other journals devoted to his interests.

After two years an opportunity offered to secure more commodious premises. He removed his business to the building on Queen street, south, represented in the cut. Here with the same courtesy, tact and enterprise, he continues to cater to the wants of his now numerous customers.

Mr. Walkem is a skillful advertiser, as may be judged from the cut published below. He is an enthusiastic agent for "S. W. P.," and his delivery dray has been made a persistent advertising force. The Sherwin-Williams Company thought the idea so good that they had the cut reproduced in their house monthly, "S. W. P.," to which we are indebted for its use.

"My case may help to prove what you have always advocated," said Mr. Walkem, "that to be successful in business one must judiciously display and systematically advertise."

There are many in the trade who might well follow Mr. Walkem's advice, added the traveller, "or better, they might take a walk through his store as I have done and there see for themselves one of the best arranged and neatly displayed hardware stocks north of Toronto."

WILL MAKE A ROOF TO WEAR.

L. R. Flint, Toronto, representative of J. A. & W. Bird, Boston, is enthusiastic over the prospects for the roofing material sold by that firm. "It will not seriously contract or expand with heat or cold," he says. "When the thermometer gets to 20 below zero it is not affected, and when the sun is boiling hot it does not soften up and run off. The insurance companies think so well of it that they take the same rates on it as they do on metallic or galvanized iron roofs. Then it can be put on with ease by any mechanic. In each roll is the necessary nails, etc., for the work, and all that the mechanic needs is a hammer, a knife and ordinary intelligence." A good deal to say in a few words.

A man at the head of a business or of a department has, or ought to have, greater ability than anybody else in the business or department, and he should exert that ability in solving the most important problems.—Mahin's Magazine.

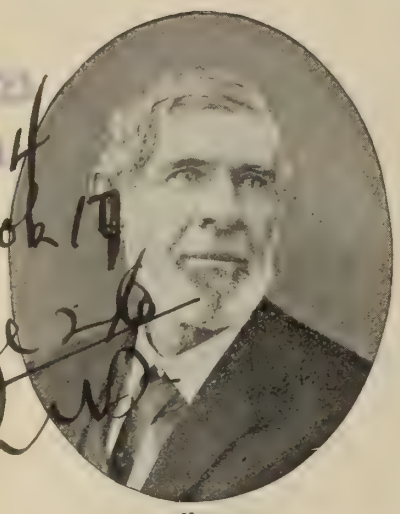
ONEIDA COMMUNITY'S

Hardware Industries. Begun in 1848.

HISTORICAL.



SEWALL NEWHOUSE.

The Oneida Community began the working of steel and iron in 1848 at a blacksmith's forge on land which it had obtained almost directly from the Oneida Indians. At this forge, Sewall Newhouse, one of the Community men and and a trapper and woodsman by deep instinct, invented a steel trap to suit his own fine mechanical eye and hand. The traits which Mr. Newhouse brought to the making of this trap were

Exceeding Painstaking and Precision.

These qualities would not permit Mr. Newhouse to make a trap that was careless or untrue, and the Indians and farmer boys soon began to beg for the Newhouse trap to replace the clumsy contrivances with which they had sought to capture game.

The Oneida Community seized this opportunity. Keeping the same PRECISION AND PAINSTAKING that marked the old trapper in selecting flawless stock and shaping and tempering its vital parts, the Oneida Community Newhouse Trap was developed as an article of commerce—whose stern fidelity in holding the Grizzly Bear and the cunning Wolf of the Rocky Mountains, as well as all the smaller animals, is known the world over.

- NEWHOUSE TRAPS
- HALTER CHAINS
- COWTIES
- TRACE CHAINS
- RAILROAD CHAINS
- CHAINS FOR AGRICULTURAL IMPLEMENTS

TRAPS REQUIRE STEEL CHAINS, and the circumstance led the Oneida Community into making them before they were known as an article of domestic manufacture. Only welded links of wire were made until the Community introduced the favorite "American Link." To-day in its variety of approved links and its patented specialties the Oneida Community presents the oldest and best equipped steel Chain business in America.

We seek your personal acquaintance, and to help it we mail an illustrated booklet giving a true history of the beginning and growth of the Community.

THE PSYCHOLOGY OF ADVERTISING

THE only method of advertising known to the ancients was the word of mouth. The merchant who had wares to offer brought them to the gate of a city and there cried aloud, making the worth of his goods known to those who were entering the city, and who might be induced to turn aside and purchase them. We are not more amused by the simplicity of the ancients than we are amazed at the magnitude of the modern systems of advertising. From the day when Boaz took his stand by the gate to advertise Naomi's parcel of land by crying, "Ho,......... turn aside," to the day when Barnum billed the towns for his three-ringed circus, the evolution in advertising had been gradual, but it had been as great as that from the anthropoid ape to P. T. Barnum himself.

As soon as printed symbols were invented the advertising man made use of them to give publicity to his merchandise. We find advertisements engraved on walls and tombs, written on parchment and papyrus, and printed by the first printing presses. Although these various forms of advertising were employed, but little thought and care seem to have been expended upon them. Posters, painted signs, street-car placards, booklets, calendars, almanacs, handbills, magazine and newspaper advertising have now become forms of advertising so well established that we look upon them as a necessity, and are surprised to learn that most of them are modern innovations.

The first advertisement printed in English appeared in the Imperial Intelligencer in March, 1648. Advertising in magazines was not begun until comparatively recent times. For instance, the first advertisement appeared in Harper's Magazine in 1864. In this magazine more space has been devoted to advertising during the past year than the sum total of space of the twenty-four years from 1864 to 1887, inclusive. Indeed, advertising may be said to have been in its swaddling clothes until about the year 1887. The most rapid development has taken place during the last fifteen years. The change has been so great that the leading advertisers say that in comparison with to-day there was in existence fifteen years ago no advertising worthy of the name.

The Increase in Advertising.

The gain in the quantity of advertising can be seen by observing the increase in the number of pages devoted to advertisements in any of our publications. The month of October is regarded as the typical month, therefore we present the number of pages devoted to advertisements for the month of October in Harper's Magazine for each year from the first appearance of advertisements in that magazine to the present time: 1864, $3\frac{1}{4}$; '65, 2; '66, 3; '67, 6; '68, 7 1-3; '69, 5 1-3; '70, $4\frac{1}{2}$; '71, $3\frac{1}{2}$; '72, 2; '73, 1; '74, 0; '75, 0; '76, 0; '77, 0; '78, 0; '79, 0; '80, 0; '81, 0; '82, $1\frac{1}{4}$; '83, $8\frac{1}{2}$; '84, 8; '85, $11\frac{1}{2}$; '86, 20; '87, 37; '88, 54; '89, 48; '90, 73; '91, $80\frac{1}{2}$; '92, 87; '93, $77\frac{1}{2}$; '94, $75\frac{3}{4}$; '95, $78\frac{1}{4}$; '96, 73; '97, $80\frac{3}{4}$; '98, $81\frac{3}{4}$; '99, $106\frac{3}{4}$; 1900, $97\frac{1}{2}$; '01, $93\frac{1}{2}$; '02, 128; '03, 141.

It will be noticed in the data as given above that during the years of special prosperity there was a very great increase in the volume of advertising while there was but a slight falling off following a financial depression. The increase was not pronounced until about 1887, but from that time on it has been very marked, not only in Harper's but in almost all of our publications.

There has not only been an increase in the number of advertising pages in the individual publications, but the number of publications has increased enormously of recent years. The increase of population in the United States has been rapid during the last fifty years, but the increase in the total number of copies of the different publications has been many fold greater. Thus the distribution of the copies of these periodicals to each individual was as follows:

In 1850 each individual received on the average 18 copies from one or more of these periodicals; in 1860, 29; in 1870, 39; in 1880, 41; in 1890, 74; in 1900, 107.

A significant cause of this increase is the reduction in the subscription price which is made possible because of the profit accruing to such publications from their advertisements. The total income secured from subscriptions for all these publications last year was less than the amount paid for the advertising pages. We have this current year about 20,000 periodicals carrying advertisements, each with a constantly increasing number of pages devoted to them, and with a rapidly advancing rate secured for each advertisement. In addition to this, the increase is phenomenal in the use of booklets, posters, painted signs, street-car placards, almanacs, and many other forms of advertising. One firm is supposed to have distributed 25,000,000 almanacs in a single year.

The Expense Entailed.

The expense connected with these various forms of advertising reaches far into the millions. One authority puts the total annual expenses of printed forms of advertising at six hundred million dollars. This sum does not seem to be an exaggeration. Mr. Post spends as much as six hundred thousand dollars annually in advertising his food products. One million dollars was spent last year in advertising Force. Over six hundred thousand dollars is spent annually in advertising Ayer's remedies; and over one million dollars in advertising Peruna.

The advertising rate has been advanced repeatedly in many magazines during the last few years. Firms which formerly paid but one hundred dollars for a full-page advertisement in the Century Magazine now pay two hundred and fifty dollars for the same amount of space. The Ladies' Home Journal has increased its advertising rate to six dollars for a single agate line (there are fourteen agate lines to the inch), the width of one column, for a single insertion. The cost of a full page for a single issue is four thousand dollars. The Proctor & Gamble Co. have made a three years' contract for a single page in each issue, to be devoted to the advertisement of Ivory Soap. For this space they pay four thousand dollars a month, forty-eight thousand dollars a year, and one hundred and forty-four thousand dollars for the term of three years. Think of the risk a firm runs in investing four thousand dollars in a single page advertisement! How can they expect to get back the equivalent of such a sum of money from a single advertisement?

The Survival of the Fittest.

The day of reckless, sporadic, haphazard advertising is rapidly coming to an end so far as magazine advertising is concerned. Although the number of pages devoted to advertising in our best

magazines has increased during the last ten years, the number of firms advertising in these same magazines has decreased. The struggle has been too fierce for any but the strongest. The inefficient advertisers are gradually being eliminated, and the survival of the fittest seems to be a law of advertising as it is of everything else that develops.

The leaders of the profession feel that their work has grown till it is beyond their control and comprehension. They have been successful, and hardly know how it has all come about. The men who have been the most successful are often the ones who feel most deeply their inability to meet new emergencies. They believe that there should be some underlying principles which could help them in analyzing what they have already accomplished, and assist them in their further efforts. As their entire object is to produce certain effects on the minds of possible customers, it is not strange that they have turned to psychology in search of such principles. Traditionally the practical business man scouts at theory. Psychology, to the popular mind, is sometimes devoid of all practical application, related to metaphysics, and suited only to the recluse and the hermit. If ever there was ground to expect sarcastic and pessimistic prophecies from the hard-headed business man, it was when it was proposed to establish advertising on a theoretical basis deducted from psychology. Such adverse criticism has, however, been the exception. The American business man is not afraid of theories. He wants them, and the more the better.

A Prophetic Editorial.

In 1895 in one of the leading advertising journals appeared the following editorial: "Probably when we are a little more enlightened, the advertisement writer, like the teacher, will study psychology. For, however diverse their occupations may at first sight appear, the advertisement writer and the teacher have one great object in common—to influence the human mind. The teacher has a scientific foundation for his work in that direction, but the advertisement writer is really also a psychologist. Human nature is a great factor in advertising success; and he who writes advertisements without reference to it is apt to find that he has reckoned without his host." The man who penned this editorial was a practical advertiser, but he admitted of no incongruity between the practical and the theoretical.

In response to this felt need on the part of the advertiser, several students of psychology have tried to select those principles of psychology which might be of benefit to the advertiser, and to present them to the advertising world through pamphlets, magazine articles, public addresses, and, in one case at least, by means of a book.

The method employed by the psychologist in attempting to give advertising a theoretical basis has been quite uniform. He has first analyzed the human mind into its various activities, then analyzed advertisements to discover what there is in them that may or may not awaken the activity desired. This method can best be understood from an example. For an illustration we shall consider Mental Imagery as understood by the psychologist and in its application to advertising.

The Influence of Imagination.

The man who is born blind is not only unable to see objects, but he is equally unable to imagine how they look. After we have looked at objects we can see them in our mind's eye with more or less distinctness, even if our eyes are closed or the object is far removed from us. When we imagine how an absent objects looks we are said to have a visual image of it. We cannot imagine how a thing looks unless we have actually seen it in our previous experience. The imagination can take the data of former experience and unite them into new forms, but all the details of the new formation must be taken from the former experience of the individual.

The man who is born deaf can neither hear nor imagine what sounds are like. Whatever we have heard, we can live over again in imagination,—we can form auditory images of it. We cannot imagine any sound which we have not actually heard, although we can unite into new combinations the sounds and tones which we have experienced.

We have no direct knowledge of the minds of our neighbors; we assume that their thinking is very much like ours, for their actions—outward expressions of thought—are so similar to ours. It was formerly assumed that, given any particular object of thought, all normal minds would reach the same conclusion concerning it, and, furthermore, the different stages in the line of thought and the "mind stuff" would be the same throughout. Such a conception is wholly false. Normal minds reach different conclusions under apparently identical outward circumstances, but there is a greater difference in the terms of thought, or the mind stuff with which the thinking is done. One man thinks in terms of sight. He is said to be "eye-minded." His thinking is a rapid succession of pictures. When he thinks of a violin he thinks rather how it looks than how it sounds.

Another man thinks in terms of sound. He is "ear-minded." His thinking is a succession of sounds. When he thinks of his friends he hears their voices, but cannot possibly imagine how they look. He does not know that there are other possible forms of thought, and so assumes that all people think in terms of sound as he does. If he should describe a battle his description would be full of the roar and tumult of the strife. Another man is "motor-minded." He thinks in terms of movements. Even when he looks at a painting he whispers inaudibly to himself a description of the painting. Later when he describes the picture to a friend he may do it in the terms which he whispered to himself when he was looking at the picture.

In a former age the seller, the buyer, and the commodity were brought together. The seller described and exhibited his wares. The buyer saw the goods, heard of them, tasted them, smelt them, felt and lifted them. He tested them by means of every sense organ to which they could appeal. In this way the buyer became acquainted with the goods. His perception of them was as complete as it could be made. In these latter days the market-place has given way to the office. The consequent separation of buyer, seller, and commodity made the commercial traveller with his sample case seem a necessity. But, with the growing volume of business, and with the increased need for more economical forms of transacting business, the printed page, as a form of advertisement, has superseded the market-place, and is, in many cases, displacing the commercial traveller. In this transition from the market-place aod the commercial traveller to the printed page, the advertiser must be on his guard to preserve as many as possible of the good features of the older institutions. In the two older forms of barter all the senses of the purchaser were appealed to, if possible; and in addition to this the word of mouth of the seller was added to increase the impressions, and to call special attention to the strong features of the commodity. In the printed page the word of mouth is the only feature which is of necessity entirely absent. Indeed, the printed page cannot appeal directly to any of the senses except the eye, but the argument may be of such a nature that the reader's senses are appealed to indirectly through his imagination.

Advertising is an essential factor in modern business methods, and to advertise wisely the business man must understand the workings of the minds of his customers, and must know how to influence them effectively,—he must know how to apply psychology to advertising.

ADVERTISING HINTS AND SUGGESTIONS

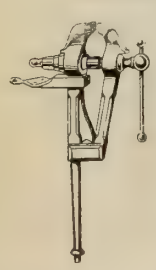
Making Price a Feature.

THERE is probably no more aggressive advertiser among Canadian retail hardware dealers than The Russill Hardware Co., Toronto. They make a distinct feature of the price of their goods in all their advertising. Another feature, one that can be followed by every hardwareman, is the bright, effective wording of their advertisements and the general use of small cuts to catch the eye as well as the mind. The style of their advertising can be determined from the following items reproduced from one advertisement, which occupied two columns in the Toronto dailies on Friday, February 27 :

Cut Priced Bird Cages.

48 only nicely Japanned Bird Cages, oblong shapes, not exactly same as cut, a product of one of the largest makers; they are splendidly finished and are complete with seed cups, perches and swing, four sizes specially cut priced for Saturday as follows: reg. 85c. for 69c.; reg. $1.00 for 79c.; reg. $1.10 for 89c.; reg. $1.20 for 99c. You'll need an extra cage when you are separating your birds.

A Sacrifice in Blacksmiths' Tools.



We want to reduce our stock in this line. To quicken the process we have put the knife into the prices of the following items, specially for Saturday: Blacksmiths' solid box, leg vises, 53 lb., reg. $6.50, for $4.75, 60 lb. reg. $7.50, for $5.50, 63 lb., reg. $7.75, for $5.75. Blacksmiths' Anvils, the well-known Hay-Budden make, 106 lbs., reg. $13.00 for $8.50, 125 lbs., reg. $15.00, for $10.50.

Eggs
Twenty Cents
Dozen

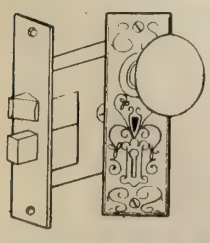
China Nest-eggs, useful as an object lesson for the hen, we sell these eggs in lots of 3 for 5c.

Handy Egg Crates

Will contaid 12 dozen eggs, secure from breakage. We sell these crates at

Twenty-five Cents.

A Clearance Sale in Fancy Door Sets.



We find in our stock an assortment of broken lots in Front Door and Inside Door Sets, beautiful, unique and artistic designs in plain and fancy bronze, old bronze, antique, copper and other finishes, such well-known makes as Yale & Towne, Corbin, Sargent, Russell, Erwin, Gurney and others, to make quick selling we have cut our regular low prices IN HALF; $1 sets for 50c., $1.50 sets for 75c., $2 sets for $1, $3 sets for $1.50. It's a money saving chance for builders and intending builders.

Individuality in Advertising.

AN advertisement to be a success success must be your ad., must bear the characteristics of your personality. I have in mind a man who has been successful in advertising his business, whose ads were ungrammatical as his every-day speech. You see they were his ads. If they were couched in the King's best English, they would not be his. I am rather of the opinion that if you are in the havit of using in your conversation such an expression as "We ain't got much, but what we got's good," you had better use than in your ads. than to allow some one to put the unnatural though more elegant expression of " What we lack in quantity we make up in the supreme excellent of our quality." Oh, certainly it is better to be grammatical, but do not send out from the printing office an ad. that would not feel at home if it should stray into your own store.

Let me say here, the great weakness of men unused to the pen or pencil, to many have a clogging up of their mental machinery the minute they get their cramped fingers on a pen and write as they never speak. Your ad. should be your spread on paper. Practice writing as you talk, until you have the ability, if you don't possess it now.

If some men talked the way they write, they would be sent to Jamestown (that's where I live), where the state takes care of people not possessed of all their faculties. The first thing, then, is that it is your ad. and should represent you. Second, of course it should be brief and to the point. Not too brief, either. Say enough to clearly convey your meaning. Do not presume that people will understand, for they will not, and it will be too late in your next ad. You will not feel the need of long editorials, such as department stores use. Just talk familiarly about your goods and their prices. Third, have a leading feature or subject for each ad.; have something about your ad. and its display that will attract the eye from other parts of the page. Make a study of these leaders, for they will make a success of your ads.—that is the way to sell goods.

You know how it is when a drummer comes into your store and says, "Good morning. Do you want anything in my line to-day?" And on general principles you will say "No." He is dead easy and goes away. Another one comes in and with tact interests you in some one thing and directly has your order for other things, also—does he not? Well, that is a leader. You do the same thing when you wait on a customer, don't you? Just do that in your ads. too.

Newspaper advertising does not mean the same ad. repeated—that is, not to be considered advertising—that is only a sign. Have a new, smart ad. every week or three times a week, if you use a daily paper. Some business men wonder if advertising pays, while others try advertising and find it does pay all right. It all depends on the advertising, and the man who makes it right makes it pay.

A Weakness of Advertising.

One of the great weaknesses of the present day advertising is found in the fact that the writer of the advertisement fails to appeal thus indirectly to the sense. How many advertisers describe a piano so vividly that the reader can hear it? How many food products are so described that the reader can taste the food? How many advertisements describe a perfume so that the reader can smell it? How many describe an undergarment so that the reader can feel the pleasant contact with his body? Many advertisers seem never to have thought of this, and make no attempt at such descriptions.

The cause of this deficiency is twofold. In the first place, it is not easy in type to appeal to any other sense than that of sight. Other than visual images are difficult to awaken when the means employed is the printed page. In the second place, the individual writers are deficient in certain forms of mental imagery, and therefore are not adepts in describing articles in terms which to themselves are not significant. This second ground for failure in writing effective advertisements will be made clear by the examples taken from current advertisements which are quoted below.

Better Advertising for Hardware Stores.

THE great things to strive for in advertising are simplicity, directness and brevity. By simplicity I mean free from fancy or befogged writing; by directness, I mean getting to the heart of things quick, telling the story clearly and fully; by brevity, I mean using as few words as possible to tell one's story.

Practice makes perfect, and perfection won't come without practice. Let any man writing advertisements test his work by these three requirements, and he will discover whether or not it fulfills the conditions of good advertising. If he finds upon the application of the rules herewith enunciated that his advertisements fall short, it will pay him many times over to make them agree with his best understanding of what they should be. Let any man be a conscientious student of advertising in this respect and it is inevitable that before very long he will be turning out good work. For example, it will become impossible for him to talk aimlessly or tediously. He will endeavor to make his story a live one, as interesting as possible, meaty and brief. He will feel that he is talking to a real audience who listens to him by reason of courtesy at first, and later because of the burden of what he has to say. Money hangs upon the successful presentation of his message. If he sees his audience turning their backs upon him while he is yet talking, he will know he has talked amiss.

* * *

The Cleveland Window Glass Company, dealing in three important building essentials—glass, sash and doors, paints and oils. It carries accounts with builders, architects, lumbermen, paint and glass retailers, picture dealers and property owners. Its business is both wholesale and retail. Its advertising proposition is peculiarly difficult. For one thing nothing must be said in its advertising about prices, for the wholesale branch of the business is by far the most important, and nothing can be printed that will lead the public to believe that the company sells below retailers' prices. Nor can the quan argument be used, for if there is anything to be said about better goods the retailer must be permitted to say it. Furthermore, the general public is not particularly interested in paints, glass, doors or sashes. The average man buys coffee once a week, but he may break a pane of glass once in five years, and he will hardly build more than one house in a lifetime. Yet the Cleveland Window Glass Company has advertised for s or more, and is one of the most conspicuous advertisers in its section of the country. Its publicity is handled by Mr. E. W. Palmer, secretary and treasurer of the company. Mr. Palmer began twenty years ago, knowing little of advertising, but thoroughly convinced that a large trade could be built up in his line through publicity. For several years he used eight and ten inch double column spaces in Cleveland dailies, filling them with advertisements of a peculiar sort. They tried to tell all about everything in the stock every day. Mr. Palmer believed that individuality was a huge factor in advertising so he put in the best individuality at his command, very good individuality, too, which attracted attention and sold goods. But he became dissatisfied with his work after a time, and went away to the East to ask Mr. John E. Powers, an advertising specialist of more than national fame, about it. He took along some sample advertisements and submitted them, and the Great One said :

"That's not good advertising."

"They think it is up in Cleveland," Mr. Palmer protested. "It's talked about and it brings results."

"But it isn't first-class advertising."

"Why ?"

"Well, in the first place you're using too much space and spending too much money—more money than your business can afford. Then, you can't keep up the pace—that much cleverness every day will drain your energies, and the advertisement will begin to drag upon you by and by. You ought to stop, get a little single column advertisement in preferred position, use small type, tell some little thing about the business every day, and tell it in such a way that everybody will be interested."

By way of showing him how his publicity ought to be handled, Mr. Powers wrote some advertisements. Furthermore, he taught him how to write them himself. Showed him the advantage of preferred positions—reading matter on three sides of a small daily advertisement instead of a large black-display announcement fighting for an existence among other black display announcements. He taught him forevermore the folly of trying to obtain type that nobody else could use, and convinced him that the plain pica of the First Reader is not only good enough to print a thought of Shakespeare's but that it will faithfully mirror an advertising man's thought, if there is any thought in it.

Mr. Palmer was a bit skeptical as to the possibilities of the window glass business at first. It was a line in which there was almost no general interest. He couldn't be expected to tell his whole story every day, and perhaps would never get a chance to tell it at all. The best way of advertising seemed to be running an off-hand paragraph daily, letting it reflect the spirit of the business and the company rather than the commodity—convince people that the company was conducted in a spirit of enterprise and liberality and old-fashioned honesty. At best he could simply create general good feeling between himself and the public, and when the individual reader wanted glass, doors, or paint, he would come.

Mr. Palmer went home and put his lesson to good use. He read Mr. Powers' stuff and studied his methods, cultivated the acquaintance of all the little English words, prunned his matter down to the single paragraph, and got reading matter on three sides of his advertisement by the simple expedient of paying for it. He found that the average reader remembered but one or two facts in an advertisement, even though it covered a whole page, so he cultivated the art of putting down these facts into two inches single column. One fact was more likely to be remembered than two, took less space and left the rest of the page for the newspaper publisher to fill with live news. In the beginning of his career he had supposed that there were only three or four things to say about glass, sash and paint, but the Great One taught him how to broaden his subjects and find something new to say with every change of the weather.

* * *

Such is the story of an advertising experience as recorded in Printers' Ink.

Here is a specimen of Mr. Palmer's better advertising :

> Nobody believes what Prism Glass can do to make dark rooms light till he sees a test. Come in and learn.
>
> **CLEVELAND WINDOW GLASS CO**
>
> Glass Doors, Paints
>
> South of Square.

Other text is :

Autumn is the best painting season. Paint is apt to wear better when it is is applied when the temperature is uniform—neither too hot nor too cold.

Nothing to say about linseed oil except that the price is right. We hear when the price goes up, and some times when it goes down, we hear that, too.

Would you like to see some of the beautiful doors our mill is turning out? We are not trying to do hardwood cheaply. There is no fun in cheap hardwood for anybody.

Busy at keeping out the cold these days? Doors, windows, storm sash, etc., reglazing—its all in our line.

The iron-work of skylights should be painted in these days of sunshine and rain. We can keep them in repair either before or after they leak, as you prefer.

Let every factory man read this: There is money for you in water paint—us, too.

JOHN C. KIRKWOOD.

THE OFFICE

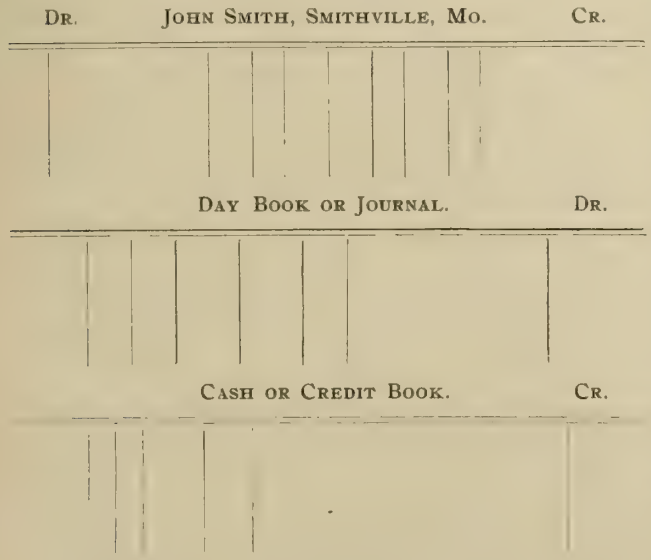
DEVOTED TO THE OFFICE STAFFS OF BUSINESS ESTABLISHMENTS

A SYSTEM OF BOOKKEEPING FOR COUNTRY MERCHANTS.

By Henry C. Nelson, Kansas City, Mo.

BOOKKEEPING is not a new subject by any means; we know that it has been practised and in vogue since the time that mercantile business was started. Of course there are a number of merchants who have taken up a course of bookkeeping and can therefore readily understand its use, but I feel confident that there are many merchants who do not recognize that bookeeping is a necessity towards obtaining success in the business world. The probable reason for the ignorance of some of these merchants is the fact that bookkeeping as taught in the schools and colleges of to-day is too complicated, and they do not feel like spending the time learning the theory. I sincerely believe that if the retail merchants could be interested in a very simple system of bookkeeping which would not require much thought or experience, it would be appreciated and perhaps would induce some of them to keep such records as would show their financial condition at any time.

The system I have in view is very simple, and I believe that the busiest merchant could not give the excuse, substantially, that it would require too much time to operate it. I would use three cards; one would be the ledger card, another a day book, or, properly called, a journal, and the last a credit book, or, in other words, cash book, which is of different color, as follows:



It is about as simple as could be made to get the results which we are after by posting on the day book or cash book each item as it is sold or received, as the case may be; then the only entry required for the time being is made, and at the end of the day a balance can be taken with the cash on hand, showing the exact amount of business done for that day. The ledger could be posted from the journal or cash book either at the end of the day or whenever convenient during the month.

I would also suggest that a separate ledger card be made for merchandise sold for cash and posted the same as an account. This would bring the books into balance without any trouble whatever. As regards the individual accounts that the merchant carries on his ledger, I would suggest that a card for each one be made and each item posted at the merchant's convenience, so that should he be called upon by his customer for a statement of his account he will have no trouble in giving the information desired, consequently it is to his interest to have his books posted up to date.

Now to get at the merchant's financial condition, I would suggest the following system of bookkeeping in connection with the above. Post invoices when goods are received on the cash card, just as if so much cash had been received. When the bill is paid, it should be posted on the journal, just as if so much goods had been sold and taken out of the store; for money paid out by the merchant for bills that are due will decrease his resources that amount. Should he be called upon to render a statement of his financial condition, it will be necessary for him to take an inventory of his stock on hand, then refer to his ledgers, adding accounts that are owing him, together with what cash he has on hand and his balance in bank, his unexpired insurance, and other assets, such as real estate, furniture and fixtures, etc., etc., deducting bills which he is owing for goods and any further existing liabilities.

If the system was operated as above, and books were balanced each month, he could, after taking inventory, which in my opinion would only be necessary twice a year, give a true and complete statement of his financial condition, showing all assets and liabilities, together with his net worth, and there would then be no occasion for any man to estimate his condition when called upon to make a statement of his affairs. It may appear to you now that the system is a little complicated, and I admit it is not perfection as yet, but the idea is there, and I have already installed the system among our customers, and I will make it a point to personally visit these people to see whereby any improvements can be made to make it more simple. There is no doubt in my mind but that this system of bookkeeping, properly installed and properly operated, will prevent many of the failures now recorded.

I have interviewed customers who have requested credit and have inquired is an off-hand way regarding their condition. Some of them have replied, estimating their worth, and have afterwards found out that they were entirely wrong. We had a case in Missouri which I beg permission to cite. The party in question was a good customer and had always met his bills promptly, was con-

sidered honest, although he was not worth very much over and above exemptions. A few months ago he had a very good and prosperous business, and after the busy season he contemplated taking a rest and went on a visit to some of his relatives in Colorado, taking $500 with him, which he thought he could spare. After his return he began to figure how much ahead he was on the season and found out that he had overestimated his profits and had taken $250 more to spend on his vacation than he had really made. Of course it put him in a very embarrassing position, but he reported his affairs to our representative and stated that the next time he wanted a vacation he would first find out how much he could afford to spend. He has since been using our system on our recommendation and considers it a success. He was a man that did not believe in bookkeeping, as he considered it too complicated for such a small business as he had been doing, and although he was honest, the weakness of his condition nearly finished him.

Sometimes failures are due to carelessness and not dishonesty, and a thorough system of bookkeeping will no doubt prevent carelessness in the majority of cases. On every occasion that an out-of-town customers pays us a visit, we take up the system of bookkeeping with him thoroughly, and it is surprising to find how willing they are to learn a system which will prevent errors. In reporting their condition there is no doubt but that many of the statements given to the mercantile agencies are made in good faith, but are entirely wrong through the merchant being obliged to give a hap-hazard account of his condition. In some cases the wholesale house suffers when giving credit to a man apparently in good condition, according to his statement, who afterwards makes an assignment or is forced into bankruptcy.

As I have stated before, I am not satisfied until some improvement can be made on the above system, and any suggestions for its betterment will be a further step towards the common end we all have in view. If we can interest merchants to adopt a system of bookkeeping which will prevent even a few failures, I think we will be amply repaid for any efforts we may make.

"CLOSED FOR LUNCHEON."

THE practice of closing commercial offices during lunch hour, which is general on the Continent and has been largely adopted by houses in Manchester, Glasgow, and other large cities, is now being introduced in London. Last Summer the proposition was made that the warehouses should be closed during the middle of the day, but the suggestion was not taken up very readily. The idea has been revived again, however, and, amongst others, E. & H. Tidswell & Co., of Wood street, are now following the custom, and it is said to be greatly appreciated on the part of the firm's customers as well as the staff. This firm is well-known to readers of The Review through their advertisements, and the adoption of this new idea is quite in line with their progressive business policy.

A QUESTION OF CASH DISCOUNT.

ONE of the subscribers to the Bookkeeper ventilates an interesting question which recently came up for solution in his business. He says:

"Our friend sold to a customer July 1st a bill amounting to $4,286. Terms cash, 10 days, less 4 per cent. The customer remitted $4,000 on account within the time limit. How much discount should we credit to his account? He may settle the balance within the time limit or possibly not for several months."

That is, should the customer be credited with 4 per cent. discount on that amount of bill covered by remittance supposing same had been in full settlement, or is he only entitled to 4 per cent. discount on the actual amount of his remittance?

One authority decides one way—another authority decides in favor of the other. Which is right? Perhaps some of our subscribers might be disposed to favor us with their views on the subject.

THE APPEARANCE OF LETTERS.

A BUSINESS man may well tremble to think of the good or bad impressions being constantly multiplied and sent out from his stenographic department, remarks Mahin's Magazine.

The position of typist is a very responsible one. A business letter is the representative of a firm. If it is slovenly and careless in appearance it creates instant prejudice.

If neatly and intelligently written it inspires confidence and respect.

Only a small percentage of the patrons of most concerns ever come in personal contact with the house. They judge of the firm's intelligence, its enterprise and business management by the smartness and finish of such work as comes to hand.

A typist may look upon a letter merely as something to be done and gotten out of the way, but a letter has a long life. It is filed away and preserved for years. It may be referred to many times. A letter written to-day may be criticised or complimented ten years hence.

It is a mistake to suppose that no one cares or notices when work is well done. It is always noticed; besides, good work is worth while if only for the self-satisfaction it gives.

It is something to feel that one is improving a little every day; going forward, instead of backward; becoming more capable and efficient.

The habit of good work makes everything easier, makes the day pass more quickly, and puts one on good terms with one's self.

A letterhead placed in the machine is merely a sheet of paper, like a piece of white sketching board before the artist.

The operator can make something beautiful of it if she will give it form, expression and character.

A perfect typewritten letter is really a thing of beauty, attractive to the eye and the mind.

EDUCATE THE CORRESPONDENCE CLERK.

PRINTERS' INK says no letter in answer to inquiries should go out of the office without being edited by the advertising manager. After having prepared the copy for the advertisement, the manager knows exactly what he wants to say farther, and the qualities which brought forth the inquiries would bring forth still greater interest. Why should not the correspondence clerk be educated in the art of advertising and so co-operate with the advertising manager?

There is a wonderful advantage in going about your work in a happy manner; and this is easy when you remember that happiness is not the result of conditions, but is a cultivated attitude toward the processes of life.

Leading Canadian Accountants and Auditors

This list is for the purpose of placing retailers, manufacturers' jobbers and other readers in touch with reliable and competent accountants and auditors whose services are so frequently required for such purposes as opening books, adjusting and auditing accounts, arranging partnerships or organizing joint stock companies, devising special office systems, making collections and investigations, handling estates, making valuations, etc.

FINANCE AND INSURANCE

AS a means of forcing American currency out of circulation, the banks of Edmonton, Alta., have decided to charge a substantial discount on all United States currency passing through their hands, says a western exchange. There is no question that the profit on the coinage in circulation in Western Canada should be made by the Canadian Government, and moreover that the coinage in circulation in Canada should be Canadian coinage. On the other hand it must be remembered that the prevalence of considerable quantities of United States currency in Western Canada at the present time is due to a particular cause, namely, the remarkable influx of settlers from the United States. The whole West has apparently every reason to extend the most cordial welcome to such desirable immigrants; the desire of the business community as a whole seems to be to give the newcomers the full value of their money. It is doubtful in view of the special circumstances whether a wiser course on the part of the Edmunton banks would not have been to invite the local merchants to turn in to them all United States currency coming into their hands. The banks could express it to the United States, and the total expense involved which the banks could charge against the merchants or bear themselves as they saw fit, would be inconsiderable.

* * *

THE annual statement of the Merchants' Bank of Prince Edward Island issued December 31, 1903, reveals the following satisfactory condition of affairs: Net profits for the year were $55,595.57, to which is added the amount brought forward from 1902, $1,187.59, making a total of $56,783.16. From this sum after the payment of two dividends and sundry appropriations the sum of $30,363.18 was transferred to rest account, together with the premium on new stock issued, $30,636.82, making that account now $266,000.00, or $77,781.51 in excess of paid-up capital.

* * *

IT is reported that the name of the company which will take over the assets and property of the Consolidated Lake Superior Company is the Canadian Improvement Company. It will be capitalized at about $40,000,000, which with bond issues of $13,000,000 will bring the total amount of securities of the new company up to $53,000,000. W. L. Bull and J. T. Terry, of New York, and R. Pitcairn, of Pittsburg, are among the leading interests which propose to rehabilitate the old company.

INSURING BANKS AGAINST LOSS.

THE majority of civilized people are already reasonably well posted on insurance, and if the number of insurance agents continues to increase in the same proportion as it has during the last ten years there is reason to believe every mother's son of us will have at least an opportunity of becoming a wiser and better man in this generation.

The latest insurance novelty reported is an association to insure United States national banks against loss; what is more, expert financiers have declared the application of principles of insurance to banking to be entirely practicable. The scheme is to levy an annual tax on the capital or deposits of every bank in the country, the amount of tax to be calculated according to the mortality among banks, and the percentage of probable loss. In this way, a reserve will soon be built up which will be sufficient to meet every loss incurred, pay in full the liabilities of every failing bank, and make good every impairment of capital. Statistics show that if a tax of 3-8 of one per cent. had been levied annually upon the outstanding circulation for the last 39 years it would have been sufficient to redeem the outstanding notes of every national bank that has failed during the same period wtihout having to fall back upon bonds held as security or other funds.

WALL STREET AND THE COUNTRY.

Atlantic Monthly.

OF the many lessons to be learned from recent experience, one of the most obvious is that the outsider should not enter the stock market in the gambling spirit, but only for investment, and then only when he has made a careful study of values of properties and their earning power, and of the conditions which affect the market ..... Other things being equal, two important elements operate upon the price paid for an investment—its safety and the net return paid in interest or dividends. A high degree of safety will contribute towards raising the price of an investment, but the rise in price will render it less attractive upon the other side by reducing the return upon it. For the owner of an investment security and especially for him who has it to sell, a scarcity of safe securities and a rise in their price are acceptable and desirable. For the owner of capital seeking investment, however, an excess of such capital in the market and a high price for securities are an injury, because they reduce the earning power of his capital in whatever securities he may invest it. To meet his needs new demands for capital must be found from time to time, equal to the amount of capital created.....The path followed during the past few years has been the conversion into large corporations of industrial enterprises aggregating about nine billions of dollars. When the earning power of a number of mills or factories could be capitalized into bonds and preferred stocks, a supply of securities could be created which would meet the demand for new forms of investment arising from among those who were rapidly making money under favorable commercial conditions..... This tendency to create securities has undoubtedly been overdone within the last few years. There followed the phenomenon of a mass of

undigested securities which could no longer find the market of a few years before. The public victimized by such were themselves to blame quite as much as misguided or dishonest promoters. If they passed by conservative companies and safe investments to seize upon glittering offers of speculative stocks by mushroom companies who was to stay them or retrieve their errors, so long as those who deluded them kept barely within the line of indictable fraud.....Every new form of financial organization has to pass the test of fire. The ultimate capacity of the joint stock system of organization is still untested. During the past century it has been extended to nearly every form of manufacture and to the complicated problems of transportation by land and sea. It contains, however, other possibilities which have not yet been developed. Among those recently put into practice have been the consolidation of great industries, the leasing of one corporation's property to another, and the control of operating companies by companies holding their securities. Whether these new forms of joint stock enterprise will be successful must be determined by experience. The secret of success here as in the whole of finance, industry and competition in foreign markets is to obtain a given result by the greatest possible economy of capital and of effort.

LOSSES AT BALTIMORE FIRE.

ONE of the chief topics in financial and business circles during the month of February has been the conflagration which raged in the city of Baltimore on the 7th and 8th of that month. It is estimated that the total losses of fire insurance companies in his disaster will be about $60,000,000, making it the second largest fire—as far as insurance los is concerned—in the history of the world, the largest having been the great conflagration in Chicago in 1871. A number of insurance companies will lose from $400,000 to $1,000,000 each—among them being such well-known offices as:

London & Lancashire	$ 400,000
Munich	400,000
Queen of America	400,000
Ætna	500,000
German-American of New York	500,000
National of Hartford	500,000
Norwich Union	500,000
Phœnix of London	500,000
Sun of London	500,000
Hartford	750,000
Commercial Union	750,000
Home	750,000
Northern of London	750,000
Continental	1,000,000
Liverpool & London & Globe	1,000,000
North British & Mercantile	1,000,000
Royal	1,000,000

All the insurance companies having their head offices in Baltimore, with the exception of one, were wiped out of existence, though in most cases it is believed that there will be sufficient assets to meet the claims of policyholders. As their records were destroyed, no reliable estimate of their losses can as yet be made. A considerable number of other companies (in addition to London Lloyds) who were involved in this fire were not licensed to do business in Baltimore, and it goes without saying that such institutions as were operating sub-rosa will prefer to "keep mum" as to the extent of their losses. It is believed, however, that they were heavily involved.

It is interesting to note how the only two Canadian companies authorized to do business in Maryland - the "Western" and "British America"—fared in this conflagration. Their losses are estimated at about $300,000 and $200,000 respectively. These amounts, while large, represent only about one month's income of each of the two companies, the total receipts of the "Western" for 1903 being $3,678,387 and of the "British America" for the same period $2,421,383. In view of the fact that they have been represented in the leading agency in the city of Baltimore for some thirty years, these losses may be considered as moderate. In this connection a Baltimore paper remarks that while the "Western" did about 1 1-2 per cent. of the total premiums (namely, $1,500,000) in that city during 1902—the figures for 1903 not yet having been published—and the "British America" about 1 per cent. the former company's percentage of the total estimated insurance loss in the fire of February 7th is less than 1-2 per cent. and that of the "British America" about 1-4 per cent. This, surely, is evidence of a careful distribution of the risks carried by these companies in the ill-fated city.

The "Western" and "British America" Insurance Companies have been carrying on business throughout the United States for upwards of a quarter of a century—the American business of the former company at the present time aggregating about $2,600,000 as compared with $700,000 premiums received in Canada, while the income of the "British America" in the States is about $1,500,000 and in the home field $500,000.

INSURANCE IN EARLY LIFE.

THE average age at entry of proposers for life assurance is shown by the statistics of all offices, both British and foreign, to be 35. The reason of this is apparent, when it is taken into consideration that few men realise the importance of having the insurable interests in their lives covered, until the fact is pertinently brought home to them by reason of "the hostages of fortune" growing up about them.

When one begins to appreciate the inevitable results of impoverishment that are bound to overtake the family when robbed by death of the bread-winner, and unprovided for by the want of a substantial banking account or an inherited fortune, then the benefaction of a life assurance policy forces itself upon the mind.

It seems a pity, however, that the provisions that can be made, not only for one's prospective family, but also for his own old age by means of the provident protection thus afforded, is not earlier realised.

We have heretofore pointed out the combination of superior benefits that is afforded by long term endowments, and we would again accentuate this impression. In the first place, at a very small additional premium cost over whole life assurance, the policy holder is enabled to terminate his contract with the company, when by reason of advancing age he shall have outlived the calls that would be made upon him by wife and children, to the greatest advantage. Under the conditions of an ordinary life policy, if one wished to acquire its surrender value, he would find that he would do so at a comparative disadvantage as against an endowment.

If young men could only appreciate the thrift in saving by taking out a policy between the ages of 20 and 30 instead of later, they would not hesitate to embrace the opportunity. The London Report.

WHOLESALE DRAPERY COMPANIES IN GREAT BRITAIN.

As the various reports of leading wholesale drapery companies have appeared, we have pointed out how adverse conditions were in 1903 for this class of enterprise. Following the Fore Street Warehouse Company's returns, many very unsatisfactory statements have been issued, one of the worst being that of Rylands & Son, one of the largest concerns of this class. It is evident from this company's figures that it was in the second half of the year that the depression was most severe, and probably this was a typical experience. The profits for the last six months of 1902 were £106,587, for the first half of 1903 £107,156, and for the second half of that year only £81,640. The usual 12 1-2 per cent. dividend is maintained, but only by cutting down the carry forward by nearly one-half. Foster, Porter & Co., Bradbury, Greatorex & Co., and John Howell & Co. all report smaller profits in 1903, the last-named having been on the downgrade for some years. Exceptions to the general rule are Stafford Northcote & Co., and Devas, Routledge & Co., which both announce comparatively good profits. Drapery companies, however, have powers of quick recuperation, but even if this group be ignored there are undoubtedly just now many opportunities for speculative investment in the industrial market.—The London Report.

BANKING AND INSURANCE NOTES.

The Traders' Bank of Canada is erecting a new bank building at Rockwood.

The Royal Bank has opened branches at Westmount, Montreal, and Amherst, N.B.

The Canadian Banks of Commerce is erecting a $20,000 building at Portage La Prairie.

Mr. McArthur, manager of the Sovereign Bank, Hensall, has resigned. He will be succeeded by H. Arnold, of Toronto.

G. M. Patterson, Stratford, has been promoted to the management of a branch of the Canadian Bank of Commerce, Winnipeg.

The Metropolitan Bank are erecting a building at the corner of Dundas and Arthur streets, Toronto to be occupied by the bank as soon as it is completed.

P. A. Curry, manager of the Union Bank, Middleton, N.S., has been promoted to a similar position at New Glasgow. He will be succeeded at Middleton by C. E. Jubien, formerly of Sherbrook, Que.

Clay, Sharp & Co., bankers, Burk's Falls, have been succeeded by the Sovereign Bank of Canada. The Sovereign Bank has also opened a branch at Stanbridge East, Quebec., having purchased the private banking business of Colonel Gilmour.

R. H. Fulton, inspector of the Sovereign Bank, has been promoted to the position of superintendent of agencies. He will be succeeded as inspector by L. P. Snyder of the St. Catharines branch. The bank purposes to erect handsome new offices on St. James street, Montreal.

The Crown Bank has secured premises at 34 King street west, Toronto, which will be entirely remodelled and used both as the head office and office of the Toronto branch. The bank has also secured permanent offices in Ottawa, in the G.N.W. building at the corner of Sparks and Metcalfe streets.

On January 7, 1904, A. E. Ames & Co., Toronto, issued a circular letter to their unsecured creditors proposing the formation of a corporation to be known as the Securities Holding Company, Limited, which should take over the firm's assets and assume all its liabilities. Unsecured creditors were asked to consent to accept stock in the proposed Securities' Company to the full amount of their claims against the firm. Since then a great majority of the unsecured creditors have consented to the proposal and Ames & Co. have formed the Securities Holding Company and transferred thereto all their assets, each unsecured creditor having been mailed a certificate of stock in the Securities Holding Company, representing the full amount of his claim against Ames & Co.

HINTS AND SUGGESTIONS FOR THE HARDWARE CLERK

SCIENTIFIC SALESMANSHIP.

By A. F. Sheldon, of Sheldon's School of Scientific Salesmanship.

IN my study of law, earlier in my career, I came to admire Justinian and Blackstone because they reduced law to an organized science. I don't claim to class myself with Justinian and Blackstone, but I have come to recognize that there are definite laws that govern salesmanship and that salesmanship can be reduced to a science. A violation of all the laws of scientific salesmanship inevitably leads to failure in business; a violation of some of those laws results in imperfect success; an observation of all the laws leads to unqualified success. In reducing salesmanship to a science, we learn that there are four classes of salesmen: Retailers, who sell to the public, wholesalers, who sell to the retailers; specialty salesmen who sell insurance, nursery stock, etc., direct to the customers, and promoters, who make perhaps a million dollars in a single deal.

A business institution is a composite salesman of which each individual is a part, and the condition of the balance sheet at the end of the year depends upon the effectiveness of each member. Salesmanship is more than the mere disposition of goods. It is, in its broad sense, the sale of goods for profit. More specifically expressed, salesmanship, in the abstract, is that power, born of the combination of positive qualities, mental, moral, spiritual and physical, which enables him who possesses it to successfully persuade a large proportion of those whom he solicits to purchase at a profit that which he has to sell. Four factors enter into every sales transaction: The salesman, the customer, the article to be sold and the sale itself; and a combination of basic laws, truths and principles enters necessarily into these four factors.

In speaking of the salesman, I put emphasis on the man, for it largely follows that if you take the man right the sale will take care of itself. You gentlemen before me know that it is not always easy to get the right kind of man, but I am here to tell you that if you cannot get the man you can make him. The two foundation stones of success in a salesman are character and health.

By character I do not mean negative goody-goodness, but rather that magnetic force, that real manhood, born of the combination of positive qualities, mental, moral, spiritual and physical, the natural product of which is the ability to persuade. By health we mean more than the ability to eat three square meals a day, or mean the harmonious condition of the triune man, body, mind and soul, which enables the physical organization to perform its functions properly, and which promotes the development of positive qualities to a marked degree. The development of these qualities rests on the bed rock of education; not necessarily a college education—a good thing, get it if you can—but in a larger way upon education in the school of hard knocks. Education is a drawing out of man's latent faculties and qualities; it is knowledge mingled with experience; it makes the man who not only looks, but sees; who not only hears, but understands.

Character building from which is born the power to persuade, depends upon concentration and self analysis. We should analyze ourselves and discover our own weak spots. In this analysis we must consider body and mind and soul and recognize that each is composed of positive faculties and qualities, and must sort these like apples, the good from the bad. The good qualities are the positive qualities and the bad qualities the negative. Reason, a positive quality, has for its negative unreason; judgment and the lack of it are opposed; faith is contrasted with doubt, courage with fear, strength with weakness, health with sickness. In building up the positive faculties, such as I have named, is created the power to persuade. It can be done. A vein of all positive qualities exists in greater or less degree in each individual, and this vein can be broadened.

After the salesman has studied himself he must study his customer. The knowledge of men is what gets orders. We cannot go into phrenology and physiognomy, but we can study decided types. We can get to distinguish instinctively the looker from the thinker. We can learn to know what people we can lead and whom we must drive. We must learn intuition; how and what to do, so that, as David Harum says, we "can do it fust." It is a law that intuition develops in direct proportion to one's other positive qualities. Women, as a class, excel in intuition, because they have their moral and spiritual faculties more highly developed than men have. My work has brought me in contact with some of the world's greatest men of business, and I have found them without exception perfect batteries of moral and spiritual power. This study of the customer makes the difference between the order taker and the salesman. The order taker hands to the customer something that the customer has sold himself; the order taker does not sell anything. It is the salesman who sells, and he does it by approaching the customer through his intellect and his emotions.

The true salesman makes a logical, complete analysis of every article to be sold, picks out the salient features and arranges them so that they will appeal to the mind of the customer. When you have taught your clerks to do this you have done much to make salesmen out of them. The day of the success of human wind mills or walking talking machines has passed. It's the solid man who sells the goods—the logician. Every time the successful salesman opens his mouth to talk he really says something.

The mental law of sale necessarily goes through four processes: First, attention; second, interest; third, desire; fourth, resolve to acquire. This law is explained as follows: Attention properly sustained changes into interest; interest properly intensified becomes desire; desire made strong enough is changed to the resolve to buy.

Advertising is the fire under the boiler of business, and if you wish to make the business you must make the advertising hot. The man who advertises a little says it doesn't pay, is like a man who built a little fire of kindling wood under a great tank of water, and when it didn't heat declared that fire wouldn't heat water.

From what I have said you will agree with me that we don't want machines behind our counters. We want salesmen, not order takers; we want people who can secure attention, arouse interest, create desire and transform that desire in the customer's mind into a resolve to buy. Show me the man who knows the commercial value of the good, old-fashioned virtues, who analyzes himself, who makes a logical analysis of the article he is selling, who has a degree of intuition and has made a study of human nature, and who adds to these qualities the admirable ability to hustle, and I will show you a successful salesman. Genius is energy intensified. If we can only ake our employes love labor for labor's sake, mix brain stuff and soul stuff with their work, we will broaden their characters and make them efficient factors in our business success.

A Power as an Educator.

A CLERK should thoroughly understand his business; then should find out what the customer wants and give him the best thing for the purpose,''' writes Terence F. Curley, the New York cutlery manufacturer. ''Oftentimes a customer thinks he wants one thing, when really something else would be better for his purpose. If the clerk will understand his business sufficiently to give the customer this knowledge, he will have made a life-long customer as well as a life-long friend. In old times it used to be necessary for a clery to understand his business, and the customer relied almost entirely on his judgment. In all instances we would request that the best quality be given the customer, particularly if he asks for it. We would think it was a clerk's duty to know.

'' Last spring the writer was in Milwaukee, and he went into one of the department stores and asked to buy a knife, telling the lady in charge that he wanted a good article regardless of cost. After consulting two or three other lady clerks and one or two men she produced a knife. I asked her what was the price. She said $2. She was then asked if it was a good one, and she said she did not know. When asked if there was anybody in the establishment that did know, she said there was not. Now, such salesmanship as that we think uneducates the public instead of educating them. In former times, anything of that kind could not occur in a first-class establishment, otherwise it would have been advertised so that the business would be ruined. On the princile that ignorance of the law will not exempt one from penalty, we think ignorance of one's business should not either.''

A Hardware Merchants' Regulations.

A MERCHANT handling hardware, stoves, implements and furniture has used the following code of rules in his store for some years. He says they cover the ground satisfactorily

Obeserve the strictest honesty to all concerned.

Give ''down'' weight, but no more. One ounce too much is 1-16 of a pound, a margin of some importance.

Never speak evil of any one, least of al a competitor. Observe the utmost kindness to every patron, rich or poor, young or old.

Don't be too hasty in guaranteeing good—better underrate than overrate. One recommendation from a customer is better than two from a clerk. If you show a well suited customer it is a good idea to mention his or her name, especially if the person named bears a good reputation and is popular in the community.

When the proprietor is selling, or trying to sell, anything to a customer keep away from his as much as possible, so that he may give his undivided attention to the sale. If it is absolutely necessary to approach him for information or advice cut the matter as short as you can. During his engagement with a customer be as attentive to other patrons as possible.

If a claim is made for defective goods turn the matter over to the proprietor, unless you are absolutely sure the claim is just. Never give a patron a disagreeable answer because he wants his just dues.

In making charges in the day book be sure and itemize each article, number and quantity, for example: 2 kegs 10 penny nails, 1 eight-inch hasp, etc. Never enter a charge as ''merchandise''; always itemize.

Be prompt, be clean and neat. Don't get smart and know too much. A customer likes a smart clerk, but not a ''smart Alec.''

Never take a lamp or lantern into the oil room. Don't sell gasoline after lamplight. Don't allow a customer to stand by and smoke while you are weighing out powder or measuring gasoline.

When a man employs a clerk he shows that he has confidence in the one employed. It would therefore be a breach of confidence ever to mention or refer to the private affairs of an employer, even after resigning from his employ or in the event of discharge. Breach of confidence is never honorable under any circumstances. '' A still tongue maketh a wise head,'' and a trustworthy clerk maketh a glad employer.

These rules are framed to avoid talk or discussion, so that a rule can be referred to instantly and without any conversation. If a rule is referred to in the presence of a customer make no reply. Harmony is very desirable.

Clerks Who Attend to Business.

NO clerk who expects to be a success will be lacking in self-respect, says a writer in the Commercial Bulletin. He is lacking in self-respect if he is one of those who are continually trying to work the travelling salesman for extra favors. While the travelling salesman may grant such concessions as a matter of business policy, the opinion of that clerk which he carries away with him is not likely to be favorable.

In the many stores I visit I run across all types of clerks. I can count on my fingers the clerks who have the stamp of real business men and are developing fast. There are many indifferent clerks in those stores who seem to care little about the future. Then there is the big group which is always looking for the treat and seems to attend to business when it has nothing else to do.

It is always easy to pick the clerk who has the right idea. He is there to make money for the store and he shows it in his actions. He is the kind of a clerk the traveling salesman likes to treat, but he is not one of the kind who do business on treats. He wants to know about your goods, why they are better values than others, what their strong selling points are, and the profit they pay.

I have universally found that the clerk who is constantly suggesting free cigars is the poorest kind of a clerk. Instead of attending to business he is hanging around the visitors and ''joshing'' after his style. He completely loses sight of the fact that by showing a little more self-respect and dignity he could lift himself several notches above his present condition.

By endeavoring to make himself more of a business man and a little less of a grafter he would make friends that might be of use to him, where on his cheap grafting basis he actually damages his prospects.

Among the salesmen with whom I have a close acquaintance is one man who has considerable trouble with these grafting clerks. In a certain store which he visits regularly he was told not long ago that unless he ''set up'' the cigars his goods would be boycotted. In another store he was asked to contribute a certain amount of money for some ''blow-out'' the clerks were giving and the gentle hint thrown out that failure to do so would put the clerks at work on another brand of goods.

Now, that is a fine thing, isn't it? Here are clerks paid to sell goods purchased by the proprietor. The proprietor buys them because he considers the quality is what he wants and the price right. But here is an outfit of clerks who propose to ''knock'' certain goods regardless of the interest of the proprietor, if their demands are not granted by the salesman.

In some cases the proprietors themselves are to blame. I have seen enough of the bad results from this grafting to convince me that I would allow none of it in a store of mine. The clerk who keeps away from it wins in the estimation of people who are in a position to do him good.

SPORTING GOODS AND FISHING TACKLE

ONE DEALER'S VIEWS AND METHODS.

"BEYOND question sporting goods properly belong to the hardware dealer's stock in trade and are among the most profitable lines he can handle," said a progressive retailer a few days ago.

"Practically every hardware man in Canada sells guns, rifles, ammunition, etc., but according to all reports some retailers have not yet taken up the sale of other kinds of sporting goods, which I have found to be even more profitable than the lines mentioned.

"Possibly the reason why some dealers have not carried sporting goods is because of the detailed, specific attention necessary. They may feel that the profits do not make up for the great amount of attention necessary in order to develop the line. Such men would not make good miners. The sporting goods department is like an undeveloped mine; it must be opened and developed, which means that time must be given and expense entailed before business can be expected. Moreover, one must be prepared to study this department as one would study others; that, for instance, of builders' tools. The fisherman, the baseball player, the tennis enthusiast, the huntsman, all know what they want and have learned to distinguish the good from the poor, so cannot be lead to purchase inferior goods at the price of the better quality.

"This entails study which will enable the dealers to buy right and to meet on equal terms of knowledge and interest the various purchasers whom he hopes to attract.

"I have found my customers always ready to give me their advice and help. One of them is particularly helpful. He writes to the Toronto and Montreal sporting goods houses for their catalogues. These we go over together to find out if they are offering any lines which I have not got in stock and which he thinks could be sold in our town. If we find any such lines I start in at once to secure these lines at the best possible price, always taking care to have the quality up to that advertised by my competitors in the cities, the catalogue houses. I find that in nearly every case I can buy at a price which enables me to sell at or below the quotations made by them and to still have a good margin left for myself. The good friend who thus helps me out in buying is an ardent fisherman and huntsman and follows various games. So by coming in such close touch with him and by supplying him with any goods he wants at cost, I have a customer who sends many people to my store and who gives me such help that I am able to withstand any competition from outside.

"Another feature of my sporting goods business, which I think should be noted is, that I have trained one clerk in particular to keep as closely in touch with the line as he can. In addition to his study of the sporting goods stock he is, like myself, always on the lookout for business in the line. Whenever a meeting is called to organize an athletic club he makes a point of being present (sometimes we are both there) and of taking such an interest that he is generally put in office or on the executive committee of the organization. While this helps us in getting many orders, we make it a rule not to take an order unless we can meet the price, quality considered, of other competitors. Thus do we establish a reputation for being progressive and at the same time fair and reasonable. By creating the impression that we do not want more than our share we get pretty nearly everything that is going, as none of the other hardware dealers in our town have made any study of the sporting goods trade. I find this line one which is greatly assisted by advertising and window display.

"When base ball is booming in our town and great interest is centered in the game to come off in a week or so, we generally draw attention to our base ball goods and it is surprising in some cases to learn how much of the cheaper class of goods is bought by boys who have become so enthusiastic over the game that they must have a mit and a bat of their own. The same rule applies to nearly every game which becomes popular.

"We have a special cabinet for our guns. This stands somewhat over 6 feet high and has a glass door reaching almost to the top. In this the guns and rifles are suspended with the stocks up and so arranged that they can be taken out, without trouble, to show a customer. We keep here all the year round one of each kind of gun or rifle which we sell, and while the great bulk of business is done in the Fall, we get orders at all times of the year. The athletic goods, such as lacrosse sticks, base ball bats, etc., we only carry during the season, when we keep them on a stand in the centre of the store."

The Bicycle Breeze.

By C. J. A.

IT does appear to be a fact that the Anglo-Saxon people throughout the worlh follow similar vogues in their seasons. The bicycle came to America from England, and it soon became the vehicle of utility and pleasure both in the United States and Canada, and a prosperous trade was built up in the manufacture of machines. In the end America became the real home of the modern wheel and the manufacture was brought to such perfection in Canada that Canadian bicycles are to-day ridden by the vast majority of wheelmen in Australia and New Zealand. But the bicycle did not hold its vogue. The English people took to pedestrianism and the snub the home authorities gave the wheel as a means of transportation was taken up by the Colonies and our cousins in the United States. The consequence was that the bicycle suffered a loss of popularity and the manufacturers had to sit in a calm and await the springing up of a fresh bicycle breeze. The hardware men enjoyed the calm as little as anybody else.

Well, the breeze has sprung up. The big manufacturers report a steady increase of sales; bicycle stories are being written into the literature of the day, particularly by Sir Conan A. Doyle, and above all, the needed improvements have been found in the cushion frame and the coaster brake.

It is no wide guess to say that the timid and easily tired who were not tempted to ride a wheel in the very height of its vogue will take to the bicycle this season. It is no longer a strange conveyance along the country

roads for horses to shie at and dogs to bark after. The bicycle is as common on the well beaten highway as the four wheeled vehicle. And it is to-day a more easily propelled machine than ever before. The cushion frame, an attachment built into the rear part of the frame under the saddle, provides an air cushion that takes up the jar, which on the old rigid frame, made the rider uncomfortable on his seat

The coaster brake is a device serving a variety of purposes. It detaches the sprocket, and allows the wheel to spin while the pedals are idle. It is a brake that will bring the bicycle to a dead stop if either pedal be pressed backward. It is not an automatic attachment that is liable to act at inconvenient times. A rider never has to lift his feet off the pedals, so that he may rest from pedaling and the bicycle will run along under its own momentum. By actual experiment it has been shown that a rider may go a mile on a level road and pedal only from two-thirds to three-quarters of the distance—so greatly does the coaster brake assist the going.

Of course every hardware man knows what are the prospects for new sales of bicycles in his district and he may rest assured that prospective sales will be realized because the revival of the bicycle vogue has been anticipated by a hot campaign of advertising. The American companies are buying space and advertising matter is going freely into Canada through the New York mediums. But a glance at the American wheel of to-day awakens a Canadian to a surprise.

The best known make of American wheel is this season without the cushion frame and it can show only an alleged improvement in a device that adds greatly to the weight of a machine without increasing its durability or aiding the simplicity of its construction. The cushion frame is a patented device that is not available to all makes. The biggest company in Canada, however, holds the right to equip wheels with this latest improvement.

Webber Jaw Newhouse Trap.

THE Oneida Community, of Kenwood, N. Y., manufacturers of the celebrated genuine Newhouse and other traps, have specially made a webbed jaw steel trap to prevent the loss of skunk and other animals that gnaw off the under part of the foot and leg, thus freeing themselves. When the jaws of the trp close on an animal's leg that portion below the jaws soon becomes numb with little or no feeling and so many animals gnaw the foot away to under side of the jaw with the result if the bone is broken they escape. The Webbed Jaw makes an escape of this kind impossible and the attention of the trade is called to it. The illustration, No. 81, gives a good idea of the trap, but if you will mention this paper and write the Oneida Community, Niagara Falls, Ont., for their circular describing this trap, it will be sent free. While the trap shown here is No. 81, it is not a large trap, but is numbered to keep from conflicting with numbers of their other make.

Bicycle and Auto Supplies.

JOHN MILLEN & SONS, Montreal and Toronto, are paying great attention at present to bicycle and automobile accessories. They carry in their warehouses at both cities a full stock of parts, including auto chains, sprockets, hubs, spokes, rims, spark plugs, coils, batteries, dynamos, etc., of "Eagle," "Samson" and "Favorite" bicycles, sundries and tires. They are Canadian representatives of the Badger Brass Mfg. Co., and carry their solar, acetylene, cycle, motor car, searchlight, launch lamps, also Canadian distributors for Shelby seamless tubes.

These lines are, in many cases, new to the hardware trade. In fact, automobile supplies will probably never be carried in the villages and smaller towns. Yet the line is one that is bound to grow in importance for several years and it is a line that hardwaremen who are striving to keep abreast with the times should know everything about. Bicycle accessories are now as much a hardware line as door knobs or nails, and the trade should be supplied with repairs for all the popular bicycles. For this reason hardware retailers should make a point of securing the catalogue or other literature offered by John Millen & Sons. These should be studied with a view of stocking the most staple of their lines and with a view of keeping them as a work of reference in these lines.

Hardware and Metal

When an Apple Drops

from a tree it always falls faster the last second than it does the first—and the farther it falls the more speed it acquires and the harder it hits the ground.

And the longer your ad runs in the HARDWARE AND METAL the more force it acquires and the harder it hits.

In these days of keen competition it is usually necessary to hit hard to make an impression.

Which means that you must often keep your ad running a long time before it "hits" some readers.

Every ad that appears in these columns has the force of all previous ads behind it—and with each consecutive insertion YOUR ad hits harder.

The first time your ad appears it does not do as much good as the second time—and the second time it is not so effective as the third time.

"Appearances" count for a great deal in advertising.

THE ADVANTAGES OF SYSTEM.

By Frank B. Gregg.

IN this progressive age if we would be in the forefront we must first, last and always have an aim for organized work. The politician when he starts a campaign believes he can almost see the end from the beginning, because he has his forces well organized. All trusts and combines are conducted on the basis of united and systematic effort. Not only the large enterprises of the world, but the small ones that are successful prove to be so because monster minds have studied and worked out a system that lesser minds must execute. Despise not the day of small things, for from very small and seemingly insignificant beginnings have sprung the mammoth enterprises of the world. What is the solution of the question of marvelous growth as manifested in our postal service, banking, railroads, telegraph, telephone companies; in fact, business of all kinds? It may be summed up in one word—system.

The object of system is to facilitate work and save time and money, therefore when any system is so arranged that it creates more work and detail and adds to the expense of running a business it is a case of too much system. System is only good when it helps you accomplish the same or better results with less work than before. It is doing the right thing at the right time, and in a way that it will stay done. Get the thing done. The tag ends of unfinished business are time consumers; they drag on, they multiply, they take ten minutes to do if they are done to-day, two hours if they are done to-morrow. Get the thing done. Finish it. Keep your eyes off the clock. Keep your interest undivided. The new problem will be the more easily tackled when the old one is out of the way. System stands at the door and desires admittance to every interrupting detail. System sees that every facility is at hand, at the finger's end. System keeps things from you until you are ready for them. Create your system as you go along. When by no fault of yours a thing goes wrong it is a symptom that there is a lack of system. Sit down then and there and devise a system which will insure that that particular thing will never go wrong. Don't wait until tomorrow to devise the system. There is satisfaction and success in a finished article. There is danger and delay in even an unfinished detail. Proceed calmly, forcefully, quickly, but not hurriedly; get the thing done.

A business run without system reminds me of a wagon run without grease. It runs hard, wears the bearings, makes lots of noise, and sometimes gets a hot box and has to stop altogether. But a little oil of system applied judiciously to the right place stops all the trouble. But what would you think if a man had a wagon with a hot box and would commence rubbing grease on the wagon bead instead of on the axle? You would think that he did not know his business. Well, some merchants do just such foolish things, for when goods don't sell they jump on the salesmen instead of getting after the man who buys the goods that won't sell. But if they would just stop and think and apply a little of the oil of system to the buying of goods, the old wagon would move off as quickly and smoothly as an automobile with ball bearings and rubber tires. System is very necessary to know when to give it, where to apply it and size of the dose.

What retail hardware dealers need are systems that will help them buy the right goods at the right time, in the right quantities and at the right prices. Systems that will help them get their goods opened, checked and marked and put away, in such a way that they will be displayed to advantage, that the marks will stay on, and that the goods will not get damaged after reaching their proper place in stock. After getting a stock well bought, properly displayed, the hardware man must think out all kinds of schemes for letting people know what he has to sell, what his prices are, what the good qualities of his wares are. He must make people think they need and must have his goods, and when you convince a man that he needs what you offer he will very soon find the means of possessing it. The dealer must think out the methods, the manners of serving his customers quickly and satisfactorily after they have been induced to come to his store, and right here let me say that the future trade of this new customer depends very largely on the treatment he receives on his first visit. Treat him right the first time and he is easier to sell to the second time. Treat him right the second time, and each succeeding time the same, and he will soon become one of your best advertisements.

After gaining customers you must find a system for caring for the cash left by these customers. Systematic ways for looking into a man's standing before you grant him credit, and, which is much harder, systematic ways of collecting them when due. And very much of a man's success in running a store depends on how good a collector he is. Don't be afraid to ask for your money when it is due, or in letting a credit customer know that you will expect him to pay according to agreement, and always have some definite time agreed on for settlement.

MEN OF ABILITY IN DEMAND.

THE demand for the first-class men in all walks of life is greater than ever before, and never were the opportunities "at the top" so numerous or so inviting as to-day, says the Metal Worker. By first-class men we mean not merely brilliant men, but those who possess real ability, united with good judgment, thoroughness and the faculty of leadership—men of character and purpose. Youth is no longer a bar to the higher places in the business or professional world. The young man who, in a subordinate position, displays ability, zeal and energy, recommends himself for advancement irrespective of the number of his years. Those in charge of large interests are constantly on the lookout for young men of this stamp and, when found, are ready to put them into responsible positions of power and profit. It was announced the other day that the general managership of the great Metropolitan Street Railway system of New York City, involving the supervision of 460 miles of road and 14,000 men, had been conferred upon a young man of twenty-eight. In eight years the young man in question, without "pull," other than his own industry and ability, had gone through the various degrees of clerk, gripman, motorman, conductor, inspector, car starter, assistant superintendent, superintendent, assistant manager and general manager of one of the most important street railway systems in the world. Hard work and ability, united with zeal and thoroughness of knowledge of his business, formed the equipment for success in this, as in countless other cases throughout the country. Thoroughness is one of the qualities most essential to advancement. The young man who means to succeed must take pains to acquire information of every kind bearing upon his calling, and to retain it when gained. He must also know how and when to use it to the best advantage. It is the lack of this quality that keeps so many men plodding along in the lower walks of life, with the constant mortification of seeing their more progressive and ambitions juniors passing over their heads.

THE PROBLEM OF STORE LIGHTING.

A Study of the Comparative Value of the Various Systems in Use.

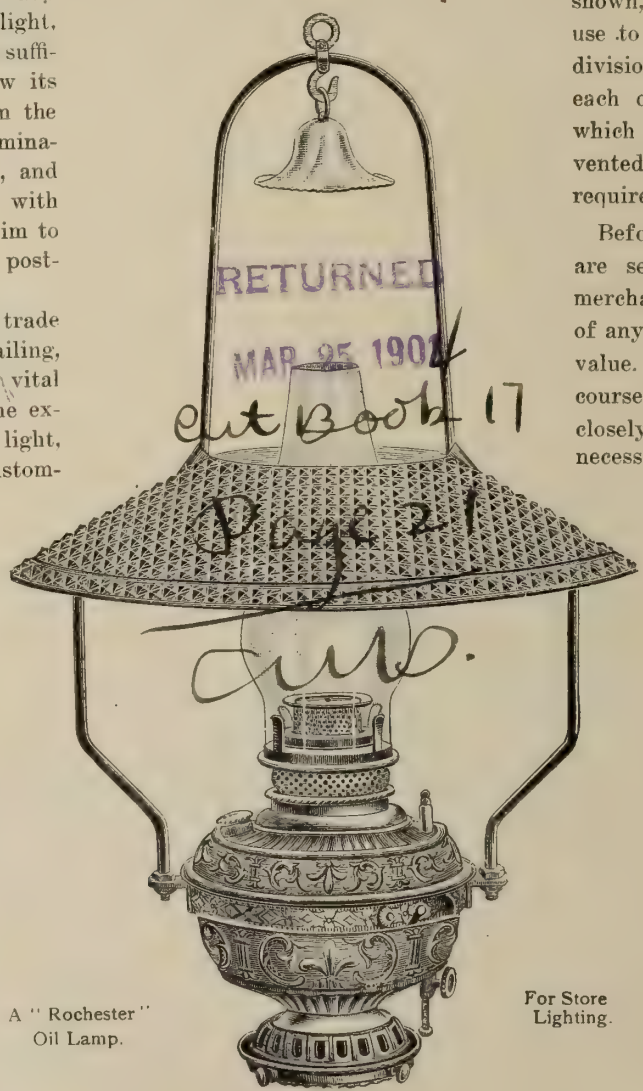
By W. L. A

The Lighting of Stores.

ONE of the very first considerations in the planning of the modern store is the facilities for lighting which are possible from the surroundings. In the store of yesterday, scarcely any difficulty was encountered in daylight, as the size of the interior was of sufficiently limited proportions to allow its being perfectly lit up by day from the front windows. At night no illumination but the lamp was thought of, and man was content to struggle along with a smoky yellow light that forced him to take potluck in night buying or postpone it until day time.

The store that aims to hold the trade in the competition of modern retailing, has found that the lighting is of vital importance, and no matter what the expenditure, there must be sufficient light, and of good quality to enable a customer to depend upon night purchases. In every store there are hundreds of shades, which were never heard of 30 years ago, and the light must be of such as to distinguish them all in as nearly accurate a form as possible. Every one of this large variety of shades has a position which no other one will fill and the woman who trusts to artificial light must feel that, in doing so, she does not run too great a risk.

Even the daylight in its untouched form is found insufficient for the illumination of the average store, with its large area and enclosed surroundings. Many a store has to depend all the year round upon artificial light for some corner, and very many others have only avoided that by the use of refractors and reflectors that throw the light in any desired direction. Daylight can be depended upon to properly light a space which in depth is only twice the length of the window from which it is received. Thus only about 16 to 20 feet of store space, measured back from the face of the window is sufficiently bright for store purposes, and thus some means must be employed even in daylight, to avoid artificial lighting in nine-tenths of the stores of to-day.



A "Rochester" Oil Lamp. For Store Lighting.

With this demand for a good light in every store in village, town or city, there have apeared scores of lighting systems, all of which have their merits and uses. These systems may be separated into five great divisions, coal oil, gasoline, acytelene, coal gas and electricity. There are, it is true, a few lights which seem scarcely to be connected with any of these divisions, such as that obtained from the use of a gas obtained by forcing air over or through petroleum or gasoline, but very little of this is used, and the few systems of this kind now shown, are not in sufficiently general use to be considered. In each of these divisions there are offered various styles, each one claiming to have advantages which the other has not, and each invented with a view to meeting all the requirements of the store.

Before purchasing any system there are several requirements which every merchant must consider, as an absence of any one of them makes the light of no value. The first consideration is, of course, quality of light, but as this is closely watched, discussion of it is unnecessary. One point to observe here is, that, in the estimation of the cost of installation, some allowance must usually be made over and above that quoted by the supply house, as their figures are always obtained under the most favorable conditions, and it is to be feared sometimes come close to misrepresentation. A clean new light tested in a clear white room, illuminates a far greater area than it will ever do in a stocked store, particularly when the system becomes clogged with dust or dim with use.

The cost of installation and maintenance may deprive many a merchant of the use of a light which would suit him admirably. But in the calculation must enter the advantages, for a light which is expensive to set up or even to maintain may, by its improved light, prove a saving and a gain in the end. A light is not dear if it pays for itself. It is well to notice too, that in computing the cost of installation, there enters more than the price of the lights only. Wir-

Page 96

ing, tubing, the necessary carpenter work, the placing of generators, etc., all add to the expense, and it requires strict attention to see that all are included. The relative cost of different systems must be looked at, but the superior merits of one system over another may overtop the greater expense.

From many systems there is an odor and smoke, which render them unfit for use. Escaping gas, the smell of coal oil or smoke, the dirt from some oil and acytelene systems are very offensive and in addition the smoke fills the air, and soils the ceiling, the light fixtures and the goods. All manufacturers prevent this when possible, but are sometimes unsuccessful, and the merchant must beware of these.

From coal oil and coal gas comes a heat which at times is very objectionable. In a window, lights which shed much heat are particularly unsuitable on account of the effect of heat on many lines of goods and the frost and steam, which are sure to collect in cold weather. The heat from lights, too, is a disagreeable, unhealthy heat in a store interior, as it is provided at the expense of much of the oxygen in the air. Where much heat is generated the lights must be placed at a distance from the woodwork or goods and this is sometimes found a great difficulty, both in the window and in the interior. This is one of the reasons why electricity is so popular, and acytelene with its limited heat is sometimes preferred to coal oil and coal gas.

There are, with many lights, a few disagreeable minutes almost every day, when the merchant or his clerks must clean and trim and prepare for the next night. Oftentimes old clothes must be donned and valuable time wasted.

One of the most important considerations is the effect of the different lights on colors. It can be safely said, that no light yet invented shows colors in their daylight shades, and therefore it is a purely relative question, in which some come nearer perfection that others, but none is perfect. As a general principal it can be asserted that the electric arc light is the most reliable and experiments in this light have resulted in the prevention of many of the inherent faults. The ordinary coal oil lamp, coal gas, and some incandescents will change most of the colors, while some gas, arcs, gasoline and acytelene lights throw a good white light which retains almost all of the true shade. White light is absolutely necessary for this—a light resembling daylight as nearly as possible, and all yellow light can be depended upon as an unreliable color revealer. It is really surprising the effect some lights have, making creams pinks and yellows appear the same, and radically altering some shades of red and green. A good test is to closely observe a few of the light shades in cloth by daylight, and then quickly entering a room lit solely by an artificial light, note the different effects.

When installing a system too little attention is paid, as a rule, to the safety of the light. Acytelene and gasolene are oftentimes the causes of serious explosions and many of the systems are unrecognized by the underwriters. That they are allowed by the insurance companies is a point which must be positively ascertained; the merchant may be fully assured of the safety of the system, but in modern retailing, insurance is a requisite that cannot be overlooked, and a prohibited insurance should prevent the installation of any system. Out of some 600 acytelene generators made in the United States only about 60 have received the approval of the engineer of the board of fire underwriters. Insist upon seeing the signed approval for every doubtful system.

In the discussion of the systems referred to in this article it must be remembered that although on general principles electric light is preferable to coal oil, the latter must receive due consideration, as a vast majority of merchants cannot obtain electricity. The divisions will be treated separately, the merits and demerits plainly stated and the merchant left to consider which is superior for him, taking into consideration cost, heat, smoke, odor, dirt, color value, trouble, safety, and all the points and features entering into a good light.

Enclosed Arc Lamp With Concentric Diffuser

Specially Designed For Store Lighting

The history of illumination is a series of steps from the glow of the campfire and torches of splinters of resinous wood to electricity. Following those oldest and crudest forms of artificial lighting came the open vase-lamps of the Phoenicians, Greeks and Romans, giving light by means of a floating bit of cotton or flax. The Romans improved on this and the first candle was made in the form of rushes covered with wax or tallow, or of a rope saturated with pitch or resin. In the middle ages these candles in advanced styles formed the principal illumination of the churches, the stages of improvement passing through tha of smoky, ill-smelling tallow candles, to drawn or cast shapes made from sperm, paraffine wax and stearine. The first lamp was a rude affair, being an improvement on the former lamp of merely a closed oil-reservoir and improved wick, with almost any shaped burner. Argand invented and developed the round form of burner and wick with the oil ascending by capillary attraction, and Carcel further improved his invention by placing the reservoir immediately beneath the lamp, to avoid shadows. The liquid employed was colza oil, olive oil or some vegetable oil. Then was used kerosene or mineral oil. When Murdock, the pioneer of gas lighting, introduced it in 1809, people refused to use it, lamplighters to light it, and insurance companies to insure buildings using it, but it rapidly secured a strong position, overcoming opposition and prejudice. And then came the electric light.

There is not the least doubt that for store lighting electricity is the most efficient. In very many stores it is not available, in a number of towns it is of insufficient energy, in others poor regulation makes an over-feed, and many are prevented from using it by its cost. But with the power well regulated and the lamp well attended to, the light of electricity meets most of the requirements of a first-class store. The points to be considered in the solution of the light problem are : Its resemblance to daylight, the

No. 3 CREMO GAS LAMP, 300 Candle Power.

FACTS ABOUT

CREMO GAS LAMP

It is the most powerful incandescent gas lamp known. Is built on new scientific principles, which increases its lighting power over 50% over any other burner. Uses 6-in. mantle.

cost of installation and maintenance, its safety, its effect on the air of the store, the odor, the ease of manipulation, and the diffusion of the light.

Electricity in its best form gives the whitest light, the light under which colors appear at their truest value, and this feature alone would place it in the highest position. But it is only in the enclosed arc that this greatest whiteness is obtained. The average incandescent light with its yellowness is death to certain colors. This is caused by a low voltage or the wearing out of the lamp, The old open arc light was rendered less efficient by its zones of brightness and shadows, by its flickering and hissing, and by the daily attention required. The causes of these defects were the closeness of the carbons, the lower of which obstructed the light, and draft and overfeed. The enclosed arc is free from these faults. The carbons are further apart and surrounded by an atmosphere which is practically free from oxygen, the entire globe therefore casting much of the light, and the carbons not acting as obstacles. An opalescent globe further increases the diffusion and makes the light whiter by filtering out the excess violet waves. The whitest light is the one supplied by a temperature nearest that of the sun, and it is well known that the temperature at the crater of an electric arc is much nearer this than that of any other artifical light. The percentage of short waves is not so small in proportion to the long waves, that there is a preponderance of red, yellow or green, and thus colored objects do not suffer to such an extent.

The safety of the electric light is a strong point in its favor, the heat generated being of a small amount and the only danger arising from imperfect insulation. No insurance company hesitates to recognize it when installed by an electrician. The air of the store is in no way affected either by the consumption of the oxygen or by the giving off of an offensive odor. In all other systems of lighting there is more or less both of odor and vitiation of air, and the atmosphere in a store is often rendered exceedingly disagreeable.

The ease with which electric lights are kept in order, whether incandescent or enclosed arc, places them in a different class from other artificial lights. Practically no attention is required and there is none of that unpleasant association with grease, oil or foul smell, and no soiling of hands or clothes. It is turned on or off without an effort and there is little variation in the light cast.

There has long been an objection against an electric arc, that it throws too strong a light in some places and too little in others, that an interior thus illuminated revealed irregularities in the degree of light. This has been satisfactorily overcome in the new diffuser which has appeared almost simultaneously in England, United States and Canada. It consists of an opalescent reflector over the lower half of the globe, which lets some light through but reflects a great part of it against a corrugated reflector above the globe. This reflector casts the light evenly at almost all angles.

It is the cost of installation and electricity in some towns that prevents many merchants from adopting this light, and it is always wise to consider this at its full value. Many of the smaller stores have proven the unsatisfactory character

Cuts

An Arc Gas Lamp for Store Lighting

of the incandescent their local company provides, and realize that an arc would cast too much light, or that several lights would overcome the shadows cast by stock where there is only one source of light. And thus it is that electricity is driven out by gas and acetylene. Against the cost of installation and maintenance must, however, be set the wear and tear of lamps, oil cans, clothes, etc., in addition to convenience, time, safety and color of light. In spite of all these, however, there are very many merchants who are preferring other artificial lights to electricity, and with perhaps sufficient cause, but where cost is not considered, and where the store is large, the enclosed arc is the king of lights.

The "Morrison Gas Arc Light."

The James Morrison Brass Mfg. Co., invite attention to the "Morrison Gas Arc Light," which they are offering the trade now. As can be seen from the view on this page this light is one of the most artistic that could be used in any store. The Morrison Company make a specialty of gas and electric light fixtures and are conversant with the needs of merchants as well as householders. The features claimed for their gas arc lamp are its durability and its large volume of light with its small consnmption of gas.

Hints for Hardware Display.

Keep the window well lighted because it attracts more attention and shows to better advantage the articles to that class of workmen who do not see them during the day. Look out for the evenings when the public will be out later than usual, and have your window particularly attractive and lighted all night if necessary, suggests a retailer.

The interior of the store should be kept as neat and clean as the show windows. That it is possible to have a Hardware store almost, if not quite, as attractive as that of the clothier, dry goods man, or even the jeweler, may be demonstrated by a visit to one of the modern, up-to-date stores, such as are becoming quite common in most localities.

When trade is a little quiet and you wish people to know and remember that you still do business at the old stand, display a rebus, offer a prize to the guesser or to the one who comes the closest to solving it, and you will be surprised at the interest shown. In the rebus convey some thought about your place of business and make this part simple, so that it can be made out by everybody. Look out for prizes to be offered in your town for races or other contests, get them, if possible, displayed in your window, then add a few neat hardware specialties on the side. I do not think it advisable to put prices on the articles displayed unless you offer something very cheap and build the whole display on that order. It gives your competitor an advantage over you, defeats your very purpose. Then, I think, the window should be well ticketed. This can sacrcely be overdone. If every article in the window has a plain-priced ticket upon it, so much the better. I need scarcely say the window should be kept spotlessly clean within and without, and be well lighted. More care and thought devoted to window dressing will repay any ironmonger who will carefully consider this matter. Prizes for the best window may sometimes be offered to the assistants.

Window and Interior Displays

Timely Hints and Suggestions

Interior Order.

THERE are stores which require a half a dozen clerks to do a $20,000 business, while another can satisfactorily handle a $30,000 trade with half the number of salesmen. The cause of this is not difficult to discover. In the first store the stock will be found to be arranged in no settled method, and a clerk is forced to hunt a few minutes for almost any article asked for, while the clerk in the second store where everything has its place, will wait on a couple of customers in the same time. It is a simple case of arithmetic, but one that too seldom bothers the brains of a merchant, that if a clerk can wait on two customers, while he is under the present system waiting on one, only half the staff or little more would be required.

Of course every store has some system and order in the arrangement of the stock, but it is not uncommon for the belief to be held that as long as an article is known to be in a certain section or on a certain shelf, that is all that is required. Nine out of ten merchants honestly believe that the plan they have adopted is the best in their power, urged on to this conclusion by the fact that they have spent really very little time on the working out of the plan. If the merchant himself does too little of the waiting in his store, he is apt to let pass unnoticed the difficulty of finding any required article. If he observes nothing the chances unfortunately are that his salesmen will bestir themselves little to remedy existing evils in the placing of stock.

A section or a length of shelving are not sufficiently confined limits for the greatest facility of finding an article asked for. A clerk should be able, when waiting on a customer, to turn directly to the spot where the article would be. Every minute lost in the search is so much money lost, when there are customers enough to require the services of more than one salesman. After a little time the salesman should be so conversant with the place where every article should be, that there would be no risk of their replacing it in a wrong position, and thus disturbing the search of the next clerk for it.

If, in his attendance on the wants of a customer, the salesman is unable to return to its proper place an article taken down for inspection, he should not be allowed to hurriedly place it on any vacant part of the shelving, whichever is the most convenient, but he should place it on the counter on better still upon a ledge at the bottom of the shelving, until he or some other clerk has leisure to replace it where it should go. This should be the duty of every clerk during his first unoccupied moments, to return every article out of place, whether put there by himself or not. In this way there is little likelihood of any quantity of stock remaining off the shelves, and interfering with the wants of the clerk who may be waiting on a customer. It is, at any rate, far more simple to glance along the edge where unplaced articles are, if it is not found in its proper place, than to be forced to look all over the shelves, as would be necessary if the clerks were allowed to shove the stock in any part in his haste. This rule should be strongly enforced, and it will not take long for the salesmen to readily fall into the habit.

A window shown by H. Sylvester & Fils, Montreal.

But it is not only the time saved that makes this matter of great importance to the merchant, but there is also the effect it will have on the customer. If there is anything that irritates a customer after asking for an article, it is to notice hesitation on the part of the clerk in looking for it, and delay in finding it. Such expressions as "we have it here some place," should never have to be uttered by the salesman. The customer stands on his side of the counter, and looks wearily around, perhaps endeavors to assist the clerk if he is a long-sighted man, endeavors to look uninterested, but all the time he is mentally commenting on the lack of order in evidence, or upon the time he is wasting waiting to be sold a five cent article.

Once the customer gets the idea that the business is run without first-class order, he does not hesitate to conclude that it is only of second-class merit in every way. Everything carried, but found only after a few minutes' search, will not create as favorable an impression as the answer in a moment that the desired article is not in stock. Promptness in serving is absolutely necessary in an up-to-date business. The rush of modern life will not allow a man to think that he can waste seconds no matter how much time he may have at his disposal. The store that serves the most quickly, and that displays a thoroughly carried out order has a large advantage over its rival, however backward in other things it may be.

Easter Display.

ALTHOUGH Easter has little effect on the sale of goods in a hardware store, it is always well to take some notice of the season by arranging an appropriate special window, that will show the public the merchant is alive and watchful of passing events and celebrations. A principle is involved in this recognition of days of local, national or world-wide importance that will give the public the impression that the merchant is up-to-date and attentive.

Since the hardware stock is not much interested in the Easter season, his window display must take the form more of a picture window that would be necessary in a grocery store. The eggs of Easter time, and the little gifts that are now so closely connected with the Easter season are part of the regular stock of the grocery store, but can be used only for display purposes in a hardware store. The egg is a fertile means of decoration, admitting as it does of so many forms of display, and being so picturesque in its colored shell of Easter time. An effective curtain for any arrangement is that made of egg shells, white or colored. These are strung on strings attached a few inches apart at the top of the window and draped down to the sides. The eggs need not be close together. Or a tent of egg shells on strings can be arranged over some object of special interest in the centre of the window. Single eggs on the end of strings dropped from the ceiling and arranged along the front glass will attract attention. The name can be spelt in eggs on the floor of the window, or dozens of other designs can be thought of if the window dresser possesses any ingenuity.

A large egg can be made by placing two wooden chopping bowls of different sizes the proper distance apart and facing each other. Attach these together by means of slats which can be bent to represent the curve of the egg. The result is an egg shaped object that can be covered with any material. One of these placed in the centre of the window can be surrounded with white cloth rabbits. This egg can expose an opening towards the glass, and inside can be displayed a special line, but a proper article is difficult to select from a hardware stock.

Chickens have always been objects of great interest to the public, particularly in large centres where live fowl are seldom seen. A hen with her brood of chickens enclosed in a part or all of the window will attract crowds who will be constantly amused with the actions of the fearless little chicks, who never notice the people gazing in at them. One merchant set an incubator hatching, so that the chickens would arrive just at Easter time, and during the last few days kept the incubator in the window, where the hatching could be watched. These little chickens when allowed to run around the window are perfectly fearless.

Whatever the arrangement decided upon for Easter there must be little attempt to advertise the stock. The window must partake almost entirely of the nature of a picture window. This class of display has a place only at certain times of the year, and this is one of them. All attempts at the introduction into the display of crosses, "gates ajar," etc., the sacred memories of the first Easter, should be strictly avoided. The window has no other purpose than to advertise, and as a part of the business should not make use of sacred things for purposes of gain. This custom of working upon the feelings by means of Biblical references is altogether too common, and should be frowned upon.

Hardware Displays For Women.

MANY women hesitate about going into a hardware store. When they want kitchenware or household goods they usually go to a department store for it. They have the impression that hardware stores are "men's stores" and they feel out of their element when they are inside of one. The hardwareman who does not attempt to correct this impression and make an effort to get women in the habit of trading at his store is making a mistake.

At regular intervals he should devote a window to articles of interest to women. Women can always be interested in a display of kitchenware. Every woman who "keeps house" is interested in this kind of goods and a good window display of pots, pans, meat cutters and the many other articles of this class, will always be productive of sales.

One of the best ways to show kitchen goods is to trim the window to represent a model kitchen. A very good background for this kind of a window can be made of boards covered with wall paper of a modest pattern. By using a range, a kitchen table and one or two cabinets the window can be made to look sufficiently like a kitchen and a great variety of goods can be shown legitimately as belonging to this sort of a display.

Another window that will invariably attract women is a wash day display. In this window may be shown tubs, buckets, wringers, sad-irons, etc. The display can be made more attractive by using a wax figure posed in the act of ironing, leaning over a tub, or in any other characteristic position.

This Week's Illustration.

THE central feature of this window is an air gun display, just what will be of most interest to the boy in a few weeks. On the floor is a revolving platform on which are stacked different kinds of air guns, each with its price ticket attached. At night this part of the display stands out with striking prominence on account of the electric lights with which it is studded.

In the background and higher than the revolving stand is another mechanical device which assists in the advertising of the air gun. Although rather indistinct in the cut, it was the mort prominent part of the arrangement. Two tree trunks are shown, the space between being covered with a good imitation of moss and grass. A man is standing by one stump with gun in hand, watching the opposite stump. Suddenly a rabbit's head and front paws appear from a hole in the stump; the entire attitude of the rabbit is very natural. The hunter raises his gun as if to shoot, but as he does so the rabbit suddenly disappears, and from behind the stump rises another man with levelled revolver to prevent the shooting.

Such mechanical devices cannot fail to attract the youngsters, and when the boys notice a window it is sure to be well advertised. Every boy dearly loves an air gun, and a reminder of the season's sport will start him coaxing his parents.

The average merchant would not find it advisable to include in one window all the lines seen in this one. The air gun part, with a few other articles dealing with Spring sport, such as fishing rods and tackle and base ball requisites would perhaps be preferable. Some fine schemes of symmetrical arranged are carried out in this window, however, the large wooden padlock covered with small padlocks, the dog collars, the butchers choppers, and the saws and axes, all showing a care in design. To the right of the rabbit was a large board, very indistinct in the picture, upon which were the words "We sell keys," spelled out in keys. A sufficient number of good ideas were worked out in this window to make a half dozen effective displays. This window was shown by H. Sylvester & Fils, Montreal.

THE BINDER TWINE SITUATION.

IT is now more than a quarter of a century since Canadians set themselves definitely to the task of developing by means of a protective tariff the young industries of a new country. For some years after the inception of this policy many were found to doubt its wisdom, but at present there does not seem to the plain man unaccustomed to splitting hairs to be any radical difference in the tariff policies of the two political parties. Each is bound to maintain a tariff which will afford more or less protection to Canadian industries. The historic quarrel between the two historic parties has degenerated into a dispute as to terms. The ordinary citizen has long ago made up his mind that protection, either "moderate" or "adequate," is the only practical policy for Canada.

But while the politicians are disputing about the difference between "adequate protection" and "moderate protection" there is a Canadian industry which is being hindered in its development by the unfair conditions under which it must compete with an American rival. We refer to the binder twine industry. There are in Canada ten independent companies manufacturing binder twine, and these concerns have all the machinery necessary to make twice the amount of twine used in this country. Nevertheless our imports of binder twine amounted last year to $1,809,865. Clearly there is something wrong.

Tne binder twine industry in the United States is now in the hands of one gigantic company which has absorbed nearly all the agricultural implement concerns. Manufacturing on a large scale for a tremendous market in which it has a monopoly, and protected by a duty of 45 per cent., this concern possesses many advantages over its Canadian competitors. Production for a large market means cheap production and our Canadian manufacturers are under the disadvantage of being confined to a comparatively small market, and being denied all access to the United States. Nevertheless they are able to offer their twine for sale at a price no higher than the regular price of their American competitor. It happens, however, that our harvest is later than the American, and Canada is often made a dumping ground in which to dispose of the season's surplus stock.

What should be done under these circumstances? Having set ourselves definitely to the task of developing the industries of the country, surely this industry is as deserving of assistance as any other, even if the assistance does cost us something. But it does not appear that a moderate tariff need increase the cost of twine. Our Canadian companies are asking only that they be assured the Canadian market.

There is no combine in Canada similar to that in the United States. The competition among our own manufacturers for the Canadian trade is very keen and should be sufficient to keep prices at a reasonable level.

Our manufacturers are not asking a high duty. They are not asking even for 20 per cent. protection, which is the rate of the tariff on binders. A 20 per cent. duty on American binders has not made their cost any greater in Canada than in the United States. The American manufacturer will not advance the price of twine because of a low duty, but a low duty may be sufficient to prevent dumping, and that is all that is necessary.

Our experience with the Standard Oil Company should teach us that there is danger in allowing ourselves to be almost or wholly dependent upon a foreign monopoly for our supplies. If there were no competition from our own industries the price of twine might easily be advanced. Surely it is the safer and wiser policy to prevent our Canadian industries from being crushed.. We have placed the binder twine manufacturer on an equal footing with his American rival so far as his raw material is concerned by giving him a bounty equal to the Philippine export duty on Manila hemp, on which the United States importer gets a rebate. Added to this the Canadian twine manufacturer needs more tariff support to offset the advantages under which the American combine does business.

A MONTREAL EXHIBITION.

THERE seems every reason to expect that Montreal will again have an annual exhibition, and if such turns out to be the case every effort will be expended to make it one that will surpass any yet held. It is some years now since the last one took place, but ever since, a few indomitable spirits have year after year brought the subject up, and at last their efforts bid fair to be realized in the Summer or Fall of 1905. The Business Men's League—an association which is never behind when Montreal's interests are concerned—have taken the matter up with characteristic energy, and at a meeting on March 9, at which their president, Mr. Henry Miles, took the chair, the plan was outlined. Men representing all important interests, agriculturists, capitalists, manufacturers, merchants and railway men were present, and were plainly thoroughly interested in the project.

In many ways the Toronto Exhibition is taken as a model. Mr. Miles in his address to the meeting, pointed out that that exhibition had been run for some years before it paid, but that the advertising gained meanwhile by Toronto had been recognized by the people of the

Queen City to be of great value to them, whether a profit was obtained direct from the exhibition or not.

The number of tourists, American and English, who visit Montreal now every year is immense, and constantly growing, though there is next to nothing in the way of advertising done for the city. Its historical associations are alone the attraction. With a yearly exhibition, of sufficient merit, another drawing card would be added which would doubtless greatly lengthen the roll of visitors. All these visitors are good customers. Montreal merchants in almost all lines of trade full appreciate that fact, and the great majority of them are showing their appreciation by the hearty support they are giving to the proposed exhibition.

A permanent board of directors has been elected as follows: H. Laporte, Mayor of Montreal; S. D. Vallieres, chairman Finance Committee, Montreal; L. A. Lapointe, L. Payette, H. A. Ekers, C. B. Carter D. L. Lockerby, R. Wilson-Smith, Col. Labelle, Hon. F. L. Beique, C. H. Catelli, J. X. Perreault, Hon. J. D. Rolland, James Cochrane, Hon. G. A. Drummond, Henry Miles, T. Gauthier, Hon. W. C. Edwards, W. E. Davis, A. H. Harris and Dr. Lalonde, representing the agriculturists.

At the meeting of the directors the following officers were chosen:

Hon. Presidents—Hon. Sydney Fisher and Hon. Mr. Tourgeon.
President—Senator Drummond.
Vice-Presidents — Senator Beique and Mayor Laporte.
Sec.-Treas.—Mr. Henry Miles.

THE SPRING TRADE OUTLOOK.

DESPITE the exceptionally unfavorable weather of the Winter months and notwithstanding the pessimism which was expressed in some quarters early in the Winter, the Spring of 1904 opens with business prospects in Canada as favorable as has been the case for many years.

It is probably true that considerable trade has been lost as a result of the heavy snow storms and the severe weather.

It may still be argued by some, as was done a few months ago by many, that Canada is in imminent danger of the "dumping" of American goods on this market. But there is little indication that any movement of this nature will attain serious proportions. The general verdict is that the danger of it is less serious than six or nine months ago.

On the other hand there are many factors which give reason for confidence in and satisfaction with the prospects.

The past six or seven years have constituted an era of development unprecedented in the country's history. This development has reached a stage that ensures, always barring a severe crop failure, admittedly a remote possibility, an era of exceptional constructive activity in all parts of the Dominion.

The building of the Grand Trunk Pacific and hundreds, if not thousands, of miles of branch lines on other railways; a record volume of immigration to the farm lands of Manitoba and the Northwest Territories; a continued expansion of the mineral and industrial developments of Ontario, Nova Scotia, Quebec and British Columbia; steady activity in the lumbering districts of Quebec, New Brunswick, Ontario and British Columbia, all combine to increase the demand for the necessities of life, and to keep the factories in all parts of Canada working at full time and to ensure for the employes a continuance of the high scale of wages of recent years.

NOTICE TO OUR SUBSCRIBERS.

A man signing himself F. B. Kenneth has been collecting and soliciting subscriptions for our publications in Ontario, but has not remitted to us the money so obtained.

Our readers are warned against paying this man any money as he is not authorized by us to transact business for us in any way. He is not and never was in our employ, and we cannot hold ourselves responsible for his actions.

Mr. Alex. Wales is our authorized agent in Ontario.

THE GOVERNMENT AID TO SOO INDUSTRIES.

THE proposal of the Ontario Government to guarantee the bonds of the Algoma Central Railway in order to stimulate the re-organization of the Soo industries, which are now [illegible], has naturally excited a great deal of interest.

It is a somewhat unusual thing for a Government to come to the aid of a private enterprise in order to save it from ruin. The case, however, is not altogether without a parallel.

Back some forty years ago the Ontario Government of the day came to the rescue of a well-known wholesale dry goods house in Toronto which was on the point of collapse. Commercial affairs in Canada at that time were in an extremely critical stage, and in order to prevent what, if at the time had taken place, would have caused, it was feared, a panic, the Government advanced the company referred to a sum of money to tide them over their embarrassment. Fortunately it was successful.

If in that particular instance the Government of the day was warranted in coming to the rescue of a private enterprise, it is much more so to-day in the case of the Lake Superior Consolidated. Although a private enterprise, its welfare is a matter of public concern. If the now idle works are not operated in the near future, not only will the reputation of the Province of Ontario suffer, but that of the Dominion as well.

For the development of the iron industry in this country we must necessarily enlist the co-operation of foreign capital. If the reputation of the industry is impaired, it will naturally be all the more difficult to secure this.

It is only under exceptional circumstances, indeed, that a government is warranted in coming to the financial assistance of any private enterprise, but in this instance, where the public interests are concerned, it seems wise that it should do so.

The proposal of the Government is to guarantee for two years, at 4 per cent., $2,000,000 of the bonds of the Algoma

Central Railway, one of the constituent parts of Lake Superior Consolidated. As security for guarantee, two million dollars of the ten million dollar bonds, which the new company is to issue, are to be placed in the hands of a trust company as collateral to the other securities of the Government. Besides this there is the security in the railway, which cost $6,750,000; the ships and barges of the company, costing $725,000, and the thirteen and one-half miles of railway from Sudbury to Creighton Mine, costing $500,000. Ninety-one miles of the Algoma Central Railway are already completed, the rails being laid while one hundred and ten miles are graded and the line is within twenty-five miles of being connected with the C. P. R.

Should the company fail, the railway, according to Mr. Ross' statement, will fall into the hands of the Government, to be run as a Government enterprise or to be disposed of as may be thought best.

On the face of it the Government seems to be amply protected. But every means should be taken to make this doubly sure. Between the Opposition and the Government there should be little difficulty in doing this.

PROGRESSIVE NOVA SCOTIA.

THE rapid development of the Northwest is almost monopolizing the attention of the country, and while this newer part of Canada is being rapidly filled by immigrants from other countries we are apt to lose sight of the rapid development and magnificent possibilities of the older provinces. Ten years ago Hardware and Metal had an article calling attention to the industrial prospects of Nova Scotia, a province which in a quiet way was then exhibiting great promise in the iron and steel industries. This article was recalled by the presence last week at the Windsor Hotel, Montreal, of so many prominent business men associated with Nova Scotia iron and steel industries.

The directors of the Nova Scotia Steel and Coal Company were in session at the Windsor Hotel on Saturday and their presence directed attention to the steady progress of that company. The report submitted to the meeting showed that 1903 had been a very prosperous year, the profits being over $200,000 larger than in any previous year of the company's history.

H. J. Plummer and Graham Fraser, of the Dominion Iron and Steel Company, were also at the Windsor. The whole country has been interested in the affairs of this company and satisfaction is expressed that the outlook is now much more promising. The prospects of securing a greater proportion of the Canadian trade are much better and under the capable direction of Messrs. Plummer and Fraser the Dominion Iron and Steel Company should enter upon an era of prosperity.

Another of Nova Scotia's industries, for some time associated with the Dominion Iron and Steel Company, is the Dominion Coal Company. The affairs of this company are also in a more prosperous condition than ever before. The Londonderry Iron and Mining Company is another iron concern with a bright future before it.

The little province of Nova Scotia has given to Canada some of the brightest, brainiest and most honored of her public men. She has also shown her ability in the industrial field. Nova Scotia is rich in mineral resources which are bound to be still further developed. Probably no other province has a brighter industrial future.

EDUCATIONAL CAMPAIGNS.

WHILE the primary purpose of a trade paper like Hardware and Metal is to furnish its readers with the news of the trade such as market variations and conditions, business changes, industrial and commercial developments, etc., it has been made manifest to the publishers that if the paper is to be of greatest service to its readers it must devote considerable study and space to the discussion of the hardware, metal, machinery and kindred trades from an educational standpoint.

It is beyond dispute that the hardwareman of to-day must be more adaptable, more ready to adopt a new line, than was the case a generation or two ago. The great progress made by hundreds of hardware retailers in several parts of Canada is largely attributable to their readiness to add to their stock-in-trade new lines likely to yield a fair margin of profit and to eventually become a part of their business.

For this reason much space has been given in Hardware and Metal during the past 15 months to educative acmpaigns, the intention of which has been to prove to the trade the advantage, the advisability of making a feature of special lines. We have sought to convince the retail hardware trade that instead of waiting for trade in staple hardware lines to come to them they should make a strong bid for business in such lines as silverware, sporting goods, bicycles, plumbing and electrical supplies, many lines of mill and factory supplies, harness, saddlery hardware, stock foods, builders' materials, etc. The practical results of our efforts in this direction have been most encouraging. Continually information comes to hand that retailers in all sections of the Dominion have decided to experiment along the lines suggested and have placed their orders for a stock of the lines referred to.

To attract trade in this way renders it necessary that the retailer make his advertising as effective and his store as attractive as possible. To assist in this work Hardware and Metal has in recent years devoted a great deal of space to window and interior display and to advertising, the purpose being to inspire readers of the paper with a constant desire to keep their stores and their advertising at a point which will ensure the greatest effectiveness in winning trade.

We intend to continue our efforts in these regards and would request the co-operation of both subscribers and advertisers in making these educational campaigns as practical and as valuable as possible.

The Eureka Digger

The best for all kinds of Soil—Sand, Clay or Gravel.

Will dig any size hole larger than 6-inches.

The best tool for sinking posts heaved by frost.

CATALOGUES, BOOKLETS, ETC.

For the convenience of its readers HARDWARE AND METAL has opened its columns for the review of catalogues, booklets or other such publications issued by manufacturers or wholesale dealers selling to the hardware, plumbing, machinery or metal trades. Retailers desiring such publications may also have inserted a note to that effect. It is requested that when any of the trade write for any booklet mentioned in these columns that they credit HARDWARE AND METAL as the source of their information.

Fire-Proof Doors and Windows.

The Metallic Roofing Co., of Canada, Limited, Toronto, are manufacturing "Richardson's" fire-proof doors and the "Hayes" fire-proof windows in addition to their embossed steel ceilings and walls. They offer to the trade for distribution a supply of folders describing these lines; also a dainty booklet showing the advantages of metallic ceilings and walls, entitled "Interior Decoration in Metal." Any or all of these will be sent to readers of Hardware and Metal on request.

Silver-Plated Ware.

In some branches of manufacture Canada may be somewhat behind other nations, but the Canadian manufacturers of silver-plated ware have brought their business to such a high standard that they have no need to fear the competition of any foreign manufacturer, either in point of design, workmanship, price or in businesslike way in which they place their product on the market. One of the large Canadian firms, the Standard Silver Co., 33 to 41 Hayter street, Toronto, have ready for distribution two catalogues describing their productions. A study of these will not fail to arouse interest if not enthusiasm. One of these, catalogue "K" is for general distribution to the trade, is a 107-page book, which is full from cover to cover with half-tone and vignetted engravings, some as large as 7 1-2x10 inches, showing the comprehensive range and the superb quality of goods carried by this firm. The other catalogue is a veritable "edition de luxe." It is cloth-bound, with the title embossed in silver on the front. The engravings, which average 8 1-2x12 inches in size, are made of the finest screen half-tones and are printed on finely calendared paper. The effect is exquisite, showing the dainty finish as well as the chaste design of the lines referred to. The very fact that the Standard Silver Co. have the enterprise and faith in the product to go to the unusual expense of preparing such a pair of catalogues is proof of the support they receive from the Canadian trade. Instead of fearing competition on the Canadian market this firm is ever ready to meet foreign competition on the open markets of the world. And in their they have had no mean measure of success.

A New Bath Tub.

Clarence H. Booth, formerly of the Booth Copper Co., Toronto, now successor to the Steel Bath Mfg. Co., Detroit, Mich., has issued one of the most artistic booklets which have been received by Hardware and Metal for some time. It describes (with illustration) "Booth's" pressed steel roll rim bath tub. The feature of the tub is that there are no castings in any part of it, the feet being pressed from heavy steel and the overflow also being pressed from sheet metal. Copies of this booklet would doubtlessly be sent to any of the trade desiring same.

Sporting Goods.

Nerlich & Co., Toronto, have ready for distribution their Spring and Summer catalogue for 1904. Included in their line are many of interest to the hardware trade, notably Boker's cutlery and razor supplies, mouth organs, express wagons, hammocks, sporting goods of all kinds, air rifles, etc. Their sporting goods line is a particularly strong one, including baseball, tennis, lacrosse, football and croquet sets, boxing gloves, striking bags, etc. The firm desire to have this catalogue in the hands of all hardware retailers, so if any readers of this paper have not yet received one they are invited to write for one.

Union Metallic Cartridges.

The Union Metallic Cartridge Co., Bridgeport, Conn., have ready for distribution their price list, also a book on trap shooting rules and records. Either of these can be had on enquiry.

Mechanical Draft.

Sheldon & Sheldon, successors to the McEachren Heating and Ventilating Co., Galt, Ont., are manufacturers of medium and cupola blowers, medium exhausters, steel plate planing mill exhausters, heating, ventilating and drying appliances for heating and ventilating public buildings, factories, mills and drying rooms or kilns, stationary and portable forges, down draft equipment for blacksmith shops, dust and shavings separators and steam specialties such as back pressure valves, steam traps, exhaust heads, steam and oil separators; also high speed upright and horizontal steam engines. They invite the trade to write for special catalogues of any of these articles. Their catalogues are gotten up attractively and with the information within so clearly given that anyone interested can decide from either the illustrations or the reading matter as to the merits of the goods.

London Fence Machines.

A publication which should be in the hands of every retail hardware dealer for reference has been issued by the London Fence Machine Co., Limited, Cleveland, O. The purpose of the booklet is to convince the farmer that it is to his advantage to use a "London" machine to weave his own fences with "London" wire. As a supply of these booklets would save the retailer much time in discussing this subject and would probably be more convincing the trade would do wisely to write the firm for a number of them. And when they are secured it would be well to read one of them carefully.

Painters' Supplies.

Edward Mayhew, 44 West 29th street, New York City, offers for distribution to the trade a catalogue describing his specialties in decorators' and paper hangers' supplies, including glass cutters, wall paper trimmers, paper knives, casing knives, rollers, straight edges, scrapers, trowels, brushes, grainers, tables, boards, etc. Hardware dealers should have these catalogues.

The Cameron-Dunn Mfg. Co.

The Cameron Dunn Mfg. Co. are issuing a new catalogue of hay tools, spray pumps, and wood turned goods. The catalogue is profusely illustrated and will be of interest and service to all dealers in these lines. In their preface, the Cameron Dunn Mfg. Co. state that at very great expense they have equipped their plant with the most modern machines that money will buy, and in such a manner that they believe it to be up-to-date in every particular for producing first-class work at least expense. The line of goods illustrated and described in this catalogue is a very extensive one. A feature of interest is furnished by the insertion of directions how to erect steel tracks, also directions for putting up and operating the reversible

carrier for wood tracks. A full page is occupied with concise directions how and when to spray various fruits. Fruit growers are devoting more and more attention every year to the spraying of their orchards and they look to the hardware man for their spraying materials and appliances. The hardware man who can give them the best information how and when to spray will get their trade. Our readers may secure this useful catalogue by writing to the Cameron Dunn Mfg. Co., Strathroy, Ontario.

—

The Sayer Electric Co.

The Sayer Electric Company, Montreal, are issuing a catalogue of their electrical fixtures and novelties. It is well illustrated and contains the exact information which the hardware man requires who is adding an electrical goods department to his store. Any reader who mentions this paper may have a copy on application.

—

Antoxide.

Harrison Bros. & Co., Philadelphia, has prepared an effective booklet describing their Antoxide (anti-rust). In it the firm say that for 90 years they strove to prevent the destruction of iron by corrosive acids, gases, fumes steam, dampness, etc., but were unsuccessful until they discovered the combination they now advise: Priming coat, red lead and pure linseed oil; finishing coat, antoxide. This they claim to be a striking success. Particulars they offer to supply on demand.

—

Alabastine.

The Alabastine Co., Limited, Paris, Ont., do not believe in leaving to the retailer all the trouble of convincing the public of the advantages of their product. Included in the literature they have distributed are: Folder entitled "Jellstone, a superior kalsomine"; booklet, "Practical Hints for the Decorator"; folders re Alabastine in both French and English. (These folders are supplied in quantity with room for dealer's name on package); dodger, "Potato Bug Finish"; folder, entitled "Land Plaster"; folder, "Paristone Wall Plaster." In addition to these are three more elaborate productions. One of these is a 15x24 inch wall hanger showing the beautiful effects which can be obtained by the use of various shades of Alabastine. The second is an artistic wal lpocket decorated in gay colors with Alabastine. The third is a panel containing 35 coats of alabastine, different shades, showing how one tint cements to another. This array of advertising helps should surely enable the retailer to reach any customer who needs convincing of the merits of Alabastine.

—

Toronto Silver Plate Co.

Hardwaremen who have made a specialty of silverware and have given it due prominence in their stores have found it a most profitable line. The Toronto Silver Plate Co., Toronto, assist their customers in a most practical manner by issuing catalogues showing their latest designs and styles. Their catalogue "No. 18" shows electro silver plate tea sets, waiters, tete-a-tete sets, coffee sets, berry sets, individual table pieces, dessert sets, etc., candlesticks, communion sets, prize trophies of various kinds. The engraving of the cuts and the printing of the catalogue is of such superior workmanship that in many cases it would probably be only necessary to refer to the catalogue in making a sale, particularly of prize trophies and some of the better sets. Copies of the catalogue will be sent on application.

—

"Alpha" High Speed Steel.

B. K. Morton & Co., Sheffield, Eng., have issued a small booklet giving information about their "Alpha" speed steel. In it they state: "After some months of careful experiment we have placed upon the market a lathe tool steel of marvellous speed and cutting power.

"So far this steel has been proved upon steel bars of .25 per cent. to .50 per cent. carbon, and upon cast iron with excellent results. Tests have also been made upon cast steel castings, and faster and heavier work has been done upon these than with any other tool steel. We do not recommend this steel for use upon chilled surfaces.

"It has been a most interesting experience introducing this steel into the various engineering workshops, as everywhere the expression has been one of amazement, and orders have been given most readily. No difficulty will be found in the treatment of this steel. Too much heat in hardening can scarcely be given, and we may add, that short of burning the tool, so that it crumbles away, it seems impossible to overheat it. The more heat, however, it has the more grinding it must have, but the tool which has been exposed to considerable heat—nearly welding heat—(in hardening, not in forging) will do more work after being thoroughly well ground than one which has not been made hot enough. The treatment extends right through the body of the tool, and the steel improves with use. Any amount of grinding, even to alter the shape of the tool, will do no harm, but will tend to give better results. Some particulars regarding this steel are offered to any readers of this paper who will write for same."

—

Ornamental Glass.

The Luxfer Prism Co., Toronto, have ready for distribution a catalogue describing the numerous designs which they manufacture. A copy of this catalogue should be secured by every hardwareman, to enable the latter to figure on contracts calling for high-class ornamental glass. They can be had on request.

—

Sewing Machine Catalogue.

"A key to large profits" is the title of a neat and attractive little booklet which Caverhill, Learmont & Co., Montreal, have issued to the trade describing their sewing machines. Caverhill, Learmont & Co. guarantee each machine for five years and undertake to supply free of charge any defective parts for that term, excepting only the wear and breakage of needles, bobbins and shuttles. This is a guarantee which gives the dealer confidence when making sales, and a guarantee which should be a great assistance in securing new business. The machines are all fitted with ball bearings and are finished with piano polish dark oak wood work. Write for this catalogue if you have not received one.

—

Stewart & Wood.

Stewart & Wood, Toronto, have a dainty souvenir of Toronto, such as they gave to the master painters at their recent convention in Toronto. It gives views of the principal public buildings, parks, the bay, water front, etc. A few of these are left for distribution.

—

United States Register Co.

The United States Register Co., Battle Creek, Mich., have gotten up a supply of blotters, on which is a cut showing the way their "side-wall" registers fit in the house. Any of the trade handling these registers can have a supply of blotters on application.

RETAILS FROM 55/ F.O.B.

Liberal discounts to Agents. Send for Illustrated Catalogue and Terms. Agents wanted everywhere.

HARNESS AND SADDLERY HARDWARE

A TRADE THAT CAN BE DEVELOPED

SOME departments of the hardware business constitute lines which are so staple that an extension of the demand for them can seldom be obtained except by price-cutting, a practice generally recognized as wrong in principle and hurtful in practice.

Not so with saddlery and harness hardware! This department includes many lines the value of which is not properly understood and which consequently respond in profitable degree to efforts spent in making them more profitable.

Some hardwaremen have made a big feature of this department, with excellent results. Others have contented themselves with handling only such goods as have for many years been known as hardware lines. Naturally the latter class has not found the department as profitable as their competitiors who have ever been on the alert to add to their stock in this department any article which offers a reasonable promise of return on the investment.

For instance, many hardwaremen have found in ready-made harness a line which is much appreciated by a certain class of their customers and have been able to follow this up by selling the buyers the materials and tools for making repairs. The wholesale harness manufacturers have reduced the cost of their product to a minimum, making it possible for the hardware retailer who stocks the line to sell in direct competition with local harness makers.

It is in some cases not the wisest policy to start such competition as it might induce an aggressive harness maker to stock lines which are essentially hardware lines, such as horse clippers, curry combs, stable brushes, whips, halters, stable latches and locks, harness oils, axle grease, etc.

In these latter lines, however, the hardware dealer has every right to expect a fair share of the trade of his district and if he does not secure this he is not giving due attention to the line.

Such lines as these are particularly worthy of attention in the Spring time, after the Winter snow is gone and farmers are coming into town in numbers. Pay some attention to this line in your regular advertising; make the line a prominent in the store; show it to advantage once in a while in the window, and make it your practice to ask your customers if they need anything in these lines at present.

Another line which is worthy of attention at this season, when the Spring rains are about due, is waterproof clothing. In this line the hardware dealer has to some extent to meet the competition of general stores but it is a line in which he can make just as good a showing and get just as large a share of the trade as any other retailer, provided he is as aggressive in business as his competitors. Some hardware dealers have not devoted much attention to waterproof goods for horses and for their customers while driving as they should. Any who have not would make a good move to add this line to their stock at once, for there is money in it.

Wound Up to Sell Clippers.

THE following bright sketch, from the Hardware Dealers' Magazine, may be useful to salesmen desiring pointers on selling clippers. The details should be studied carefully—it being necessary, of course, to adjust the description of the clipper to the machine referred to, which information can always be readily secured:

"The thing that interests me at present," said the farmer as he entered the hardware store, "is whether to invest in one or not."

"What is the article?" asked the clerk.

"A clipper for clipping horses."

"That depends," responded the salesman. "Depends on whether you keep horses or goats."

"I keep horses of course. What are you driving at?"

"Simply this. If you keep horses you need clippers. You can buy good ones for $5, and any farmer can afford that—indeed, no farmer can do without them if they cost double the money. For a clipped horse dries out freely from sweating, and it is the standing all night in a thick coat of gummy sweat that makes him take cold, and brings on the many diseases that follow. A clipped horse not only looks better, but he feels better, and he will do more work and live longer, and thus the machine adds much to his value—many times what the clipper costs."

"Show me one that you can recommend," said the farmer, who had a reputation for taking good care of his horses.

"There are several that I can recommend," responded the clerk, "but let us take this one for instance. Let me tell you what it is, and what it does. It is a very handy affair, hangs up out of the way, and thus suspended from the ceiling by a rope it enables the clipper to reach all parts of the horse with ease. Has eighteen-inch drive wheel which engages in a hardened tool steel pinion which connects to a 4 1-2 foot flexible shaft, to which is attached knife and handle. It cuts clean and fast and a small boy can turn the crank without tiring. It has the positive drive gear wheel instead of a belt. No experience is needed to operate it; any handy man can get good results right away. You will notice that it has a steel flexible shaft. The tempering of the steel for the knives and the hardening of the steel for other parts are very important factors and in this machine are first-class."

"Yes," said the farmer, "but if you have one larger and better I should like to see it."

"Here we are," said the clerk, "in a machine that costs about twice as much as the other. It's made with all cut gearing from solid metal. The teeth are milled, not cast, and engage with hardened steel pinion. In fact, it's built to last and stay in good order. The bearing of the knife blades is perfect. They are so constructed that the tension between must be balanced and even always. This prevents clogging

About a Horse Nail.

"A little neglect may breed great mischief; for want of a Nail the shoe was lost; for want of a shoe the rider was lost—being overtaken and slain by the enemy—all for want of care about a Horse Shoe Nail."

—Benjamin Franklin, 1758.

Just a few words about ourselves and the "C" brand horse nails.

This Company was established in 1865, and have therefore been manufacturing horseshoe nails for nearly 39 years.

We make nothing else but horse nails, and are the largest producers of this article in Canada. We believe nearly equal to all the others combined.

Our horse nails are of one quality only—the best that our long experience can produce. We use exclusively a special quality of material, made for our purpose in Sweden, which is the best known or used by any maker of horse nails in the world.

Starting with the best material, we use the old and well tried hot forged process, by which our nails are thoroughly forged from the nail rods at a red heat, and finished and pointed by a process used only by us in Canada.

Every nail is hand sorted and examined, to prevent an imperfect nail from entering a box bearing our "C" brand.

Every box is warranted perfect and ready for immediate use.

They are of the best designs, will drive easiest, and stand more hard usage than any other horse nail made or sold in Canada.

We solicit your kind preference for the "C" brand when ordering horse nails.

We shall be glad to furnish free samples of our various patterns and advertising matter to dealers.

Canada Horse Nail Company

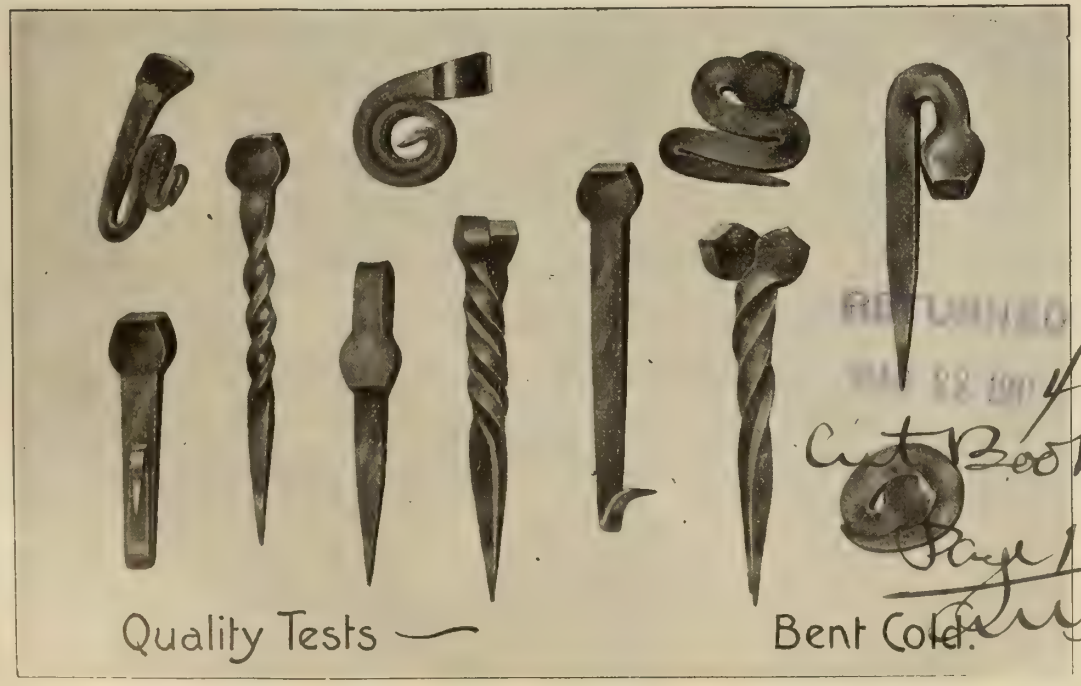
MONTREAL.

The Brand

May not have received the attention on your part which it deserves, when purchasing Horse Nails. It is, however, worthy of your best consideration. The "**C**" brand on a box of horse nails has the same relation as the artist's name on a painting. It determines its value and the character of the work.

Order the "**C**" brand and accept no substitute, especially at the same price. They are the best, and

"MADE IN CANADA."



The Quality

In buying Horse Nails, quality—not price—should be your first and only consideration. It is supreme folly to buy "cheap" horse nails. You can buy other brands than the "**C**" at a lower price, but also consider the fact, that 25 cents less per box only reduces the cost of nails used in shoeing a horse, one-third of a cent, and then consider the advantage of having the best quality, which will stand such tests as are here shown. Order the best, and

"MADE IN CANADA."

up. It has positive power—no belts to slip, no lost motion. Every turn of the wheel is sure to bring 28 vibrations of the knife blades.

"The entire machine is fine in construction and scientific in design. The large wheel is machined all over, and its periphery turned true. A balance wheel on the pinion shaft equalizes the motion. The opposite end of the pinion shaft has a quarter box tightly closed (dust proof) its revolving parts running in oil. The all-steel flexible shaft and its driving gear are carried on a solid strong tripod stand. This simple but perfect apparatus is easily adjusted by its operator to the movements of the clipper. The improved knives, or cutters, are one-nut, balance pressure type, and are dust proof. With either hand a small lad can turn the fine strong crank handle all day without tiring—it's so light running."

"Is that all you can say about it, or are you wound up for all day?" asked the farmer, with a laugh.

"There may be some more, but that's all I think of at present," was the response.

"That's enough. Whether I take one or the other, I have learned enough about clippers to pay for the time it has taken."

In battle or business, whatever the game,
In law or in love, it's ever the same;
In the struggle for power, or scramble for pelf,
Let this be your motto: "Rely on yourself."

—John G. Saxe, in Success.

An Old Whiplash Firm.

It is not surprising that in forty-four years the firm of John F. Scholz, Stratford, Ont., should have attained recognition as reliable manufacturers of their line, buckskin, horsehide or cordovan whiplashes, stock whips, drop tops and all kinds of plaited leather work. They offer to make samples in four, six and eight plait lashes, made from yellow cordovan, white horsehide and buckskin for any wholesale dealer or jobber who desire same. Mention Hardware and Metal when writing this firm.

This firm, which was established in 1860, by the late John F. Scholz, is now managed by his daughter, Miss Elizabeth Scholz, who is carrying it on with the same spirit that has characterized it from its inception.

Maritime Nail Co. Burned Out.

The works of the Maritime Nail Co., St. John, N. B., were totally destroyed by fire on the morning of March 11th. The fire was discovered about 5 o'clock in the morning by the night watchman. The firemen responded quickly, but as there was a heavy gale of wind blowing the structure was soon a mass of flames and their efforts were of no avail. The estimated loss is $50,000, with $26,000 insurance. It is not known definitely whether the company will rebuild in St. John.

Whatever your vocation may be, read, read, read! at every opportunity you get, and always read the best within your reach! Any book, periodical, or paper is bad which takes the place of something better. Enrich your life in every possible way by self-improvement, —self-culture.—Success.

ADDING SPECIALTIES AND SIDE LINES. *

ALERTNESS is essential to success. To prosper you must have your eyes open and keep abreast of the times. Keep out of the ruts; they are easy to fall into, but not so easy to get out of. Do things in a different way from your competitor. No retailer lives up to his own possibilities who does not keep on the watch all the time for new lines to add. Your people are accustomed to buy from you now one or more lines. This habit of theirs forms the best of your capital. They are equally ready to buy other lines if you will let them. Do not be afraid to try new ways and new goods. Be as good a merchant as you can and success will come to you. Study your trade. Endeavor to anticipate its wants. Study your stock. Endeavor to keep it clean and free from stickers. The modern successful merchant uses his every effort to keep in touch with what is going on in his lines. He is a subscriber to two or three of the trade papers. He reads them carefully. He examines with care the good advertising that comes within his reach, selects from it the best ideas and methods, and adapts them to his own use, taking care to instill into them as much of his own originality and personality as possible. He leaves no avenue unexplored where the extension of his trade is possible.

He adds side lines and specialties as often as he can. Capital and space are his only limits. The importance of this question of adding specialties and side lines is not disputed and only half appreciated. The reason why a man with a small stock of variety goods can hold his own against concerns that have dollars where he has dimes is simple. Every penny of his capital is in quick turning goods. The variety store handles nothing but quick sellers. It omits the heavy staples, which take a lot of money to handle, require a lot of room and on which profit is small.

While I do not advocate turning the hardware store into a variety store, I do advocate carrying more of a variety of hardware and kindred lines than is carried in most hardware stores. Add lines that suit your trade—lines that are quick sellers, for quick sellers are profitable.

The question of carrying a line of paints has recently been discussed in the Iron Age. This is a line that goes in nicely with the builders' hardware trade. If properly bought and properly sold it is a profitable line. We have handled paints, oils, varnishes and brushes for 20 years, and our paint department has grown to be one of our best departments.

Fishing tackle, hammocks, guns, bicycles, base ball goods are generally handled in sporting goods stores or department stores. They belong to the hardware store. Start a sporting goods department yourself. Taking a fishing trip or a hunting trip during your vacation; learn the merits and demerits of the lines you carry by actual experience. Then you can sell a line of sporting goods intelligently, and there is profit in sporting goods.

Add to your line of 50 and 75 cent nickel plated tea and coffee pots some of the more expensive sorts, a few baking dishes, a chafing dish or two. Put them in a nice showcase, prettily arranged. Display them. Talk them. Advertise them. Then see if your trade on nickel plated ware does not increase and your profit account also. When you have nicely started your sales of nickel plated ware add a line of fancy earthen tea pots. That will please the ladies, and a well pleased lady customer is one of your best advertisements.

Toys and holiday goods. One of the most profitable departments we have ever added has been, and is, our toy and holiday goods department. We carry in season a complete line of iron and wooden toys. We have them bought and in the store before Thanksgiving. This year just passed we commenced our holiday display on the day after Thanksgiving. We displayed toys in one window, and in another a line of fine nickel and silver plated ware. These displays were changed every few days. We cleared a large space in the front of our store and devoted it to an exhibit of articles suitable for Christmas gifts. We were busy from Thanksgiving up to 10 o'clock the night before Christmas. The toys pleased the children. The children told their parents. One little girl, four years old, said to her mother: "You can get all the toys you want down at Bartholomew's, whether you have money or not." A small boy called off his Christmas list up the chimney to Santa Claus, and said: "You can buy all of these at Bartholomew & Co.'s." The parents were interested, came to buy toys and found we had other Christmas goods to sell, and bought them. By the addition of this side line we have made the month of December one of the busiest of the year, and also one of the most profitable.

* Address by Louis C. Bartholomew, Michigan City, before the Missouri Retail Stove and Hardware Association.

THE IDEAL WOVEN WIRE FENCE.

The Ideal woven wire fence commends itself to discriminating dealers as it is constructed of heavy (No. 9) hard steel spring wire throughout, and has a peculiar lock that cannot slip. These make the "Ideal" fence strong and durable. It requires few posts, has a spring in every foot of it, and offers perfect security against cattle and all other stock. It is always a good seller, because its great merits are at once appreciated. An illustrated catalogue showing styles for every purpose may be had free by addressing the manufacturers, the McGregor-Banwell Fence Co., Limited, Walkerville, Ont.

THE WONDERFUL ELEMENT—RADIUM.

RADIUM continues to interest both the chemists and the physicists, as well as the general public. We hear, through the medium of the daily papers, more or less that is wonderful about it, and some things that are true. It should be remembered that the statements about what a pound of radium will do are somewhat like descriptions of the properties of a turnip as large as a house. The quantities of radium at an experimenter's disposal are, so far, very small,—almost microscopic. Professor and Madame Curie, of Paris, however, have recently stated that radium gives out, spontaneously, heat enough to melt its own weight of ice every hour, and that, apparently, the source of energy is unlimited. Discussion of the cause of this apparent violation of nature's laws can scarcely be said to have brought out any definite conclusion. One theory, that radium absorbs gravitational energy and turns it into heat has been carefully tested in Germany, but with negative results. It appears more probable that a minute molecular change is going on in the substance, which it requires considerable time to detect.

CARD INDEX SYSTEM.

THE Library Bureau of Canada, Limited, incorporated in 1903, has taken over the hardwood department of the W. C. Edwards & Co., Limited, in Ottawa, with the intention to continue the work carried on by this department in the line of woodwork, mantels, fittings for banks, offices, etc., and add to it the lines carried by the Library Bureau in the States.

The Library Bureau in the States are the originators of the card index and vertical filing systems. In the States they have factories in Boston and Chicago, and branches in eighteen different cities throughout the States. They also have a factory and five offices in England. In the near future we expect to have branches in Toronto and Montreal. The officers of the company are Hon. W. C. Edwards, president; Gordon C. Edwards, secretary-treasurer; H. E. Davidson, vice-president; C. H. L. Flintermann, general manager. Any readers of Hardware and Metal desiring further information are invited to write for same at once.

STOVES AND TINWARE

HEATING GOODS IN THE HARDWARE STORE.

IN a hardware store where heating goods are a feature especial care is necessary to get the best effect in display. The following from a paper by E. K. Cunningham in the American Artisan, is timely and practical :

"The interior of the store should be kept as neat and clean as the show windows. That hardware men are noted for their enterprise and intelligence is a fact generally recognized, and for this reason it seems strange that so many of them are negligent in matters pertaining to the arrangement and cleanliness of their store rooms. A great many of them who have scrupulously clean, neat and tidy houses, and who would be quick to find fault with the good housewife on account of any breach on her part of the laws of cleanliness and neatness therein, will permit their offices and store rooms in which they probably spend more of their time, to become so untidy and unclean as to cast reflections on the entire craft. The fact is the old proverb, "Cleanliness is next to godliness," and "Order is Heaven's first law," are applicable to the hardware man as it is to his fellow merchant in any other line of business. That it is possible to have a hardware store almost if not quite as attractive as that of the clothier, dry goods man, or even the jeweler, may be demonstrated by a visit to one of the modern up-to-date stores, such as are becoming quite common in most localities.

USE MANY SHOW CASES.

We use as many show cases as possible. Keep them clean and neatly arranged, using one for cutlery exclusively, another for nickel ware and silver, and so on with the goods properly arranged in each. Our shelving we extend from the floor to the ceiling in either side, using travelling ladders. On one side we keep hardware, sporting goods, builders' supplies, tools, etc. On the other side we arrange paints, varnishes, granite and tinware, woodenware, etc. For hinges, clevices, malleables, nuts and washers, we have small cabinets neatly arranged in the rear of the store on our bolt counters. Our wire screen we have on stand or rack by itself with room for full rolls beneath. Window glass in a case with cutting board at the end. Hoes, rakes, forks, shovels, spades on brackets with handles in a rack underneath. Hay knives, handled axes, crowbars, log and cattle chains of all kinds we keep in racks. Washing machines, churns, wringers and this class of goods are kept neatly arranged along the side of the bolt counters.

ARRANGEMENT OF STOVES AND RANGES.

Now in regard to the arrangement of the stoves and ranges. I take great pride in this branch of our business. Our ranges and cooks we keep nearest the shelving. Have them neatly polished and setting in a perfectly straight row, ranging in size and price to suit the trade. A customer comes to your store to buy a range. You show him a well assorted line of from 15 to 20 stoves and ranges, ranging in price all the way from $25.00 to $60.00, and you stand a much better show to make a sale than if you had a few ranges, poorly polished and setting in a zig-zag manner around the store.

We have our heaters displayed in the centre of the store, finely polished, and set upon steel frame castors with the nickel neatly polished. It is truly said "A stove well blacked is half sold." We use black silk polish on all our new goods, as it costs but little more, and gives a stove a much finer appearance. We arrange our coal stoves in the front and continue down the line with the surface burners, parlor stoves, wood base burners, oaks and air tights, having one sample of each style and size always on the floor in stove season. A great many times you can sell from stock and retain samples on the floor.

SECOND-HAND STOVES.

We also find the second-hand stove business a very profitable one. We buy and trade second-hand stoves of all kinds. This branch of our business is kept entirely separate, having a room fitted up for the purpose. These goods oftentimes net us more clean money than new goods. A man comes to us in the early fall to trade stoves. We trade him a new stove, getting our price, and get the old one at a very low figure. This stove is then taken into the second hand room and the necessary repairs made thereon, after which it is polished and placed on the sale floor, and oftentimes brings a better margin of profit than new goods. We have found this very successful, having sold as high as one hundred good second-hand stoves in a single season.

Interior of Gurney's London Store.

FURNACES.

The furnace question is becoming an important feature in connection with the retail hardware business. How many of you to-day are doing your furnace work right? How many of you are making money on the furnace business? How many are getting satisfactory results? We, having been in the furnace business for a number of years, have learned some of the drawbacks as well as some of the good points in connection with it. Too many hardware merchants to-day are doing this work on a guessing plan. Too much trouble results after the furnace is installed. I think if we all could confine ourselves to figures, measuring every foot of pipe and material that goes into the construction of a furnace job, and estimate more closely on time and labor, be more careful in buying a good furnace, having it set as neatly as possible under center of building, use a larger size of piping and cold air returns than is commonly used, much better results in furnace heating would be attained, and the dealer would reap a better harvest and the customer be more satisfied.

Expansion of Hot Air Heating.

ONE of the earliest methods of heating buildings from a central heating apparatus was by means of hot air conveyed through pipes to registers in various appartments, says the Metal Worker. This system was taken up in the United States something over half a century ago, and was brought to a high degree of efficiency. That all of its advantages have not yet been demonstrated is evident from the enterprise now manifest in exploiting the system both by furnacemen and those engaged in larger heating enterprises. In the last few years furnacemen have realized the economy of carrying one large main pipe to a point where branches are used for feeding several registers or hot air flues, examples of which method of heating buildings have been brought to the attention of our readers in recent issues of this journal. Hitherto the furnaceman has been satisfied to confine his use of hot air for heating to its distribution through different rooms. About a year ago we brought to the attention of our readers a system which has been invented and put in use in Canada, whereby the air is circulated through special sheet metal radiators for heating apartments, the same air being brought back to the furnace to be reheated and circulated again. The claim is made that by this method it is not necessary to run the furnace at so high a temperature, inasmuch as the air which is brought back for reheating seldom falls to a lower temperature than 50 degrees, so that it is not necessary to have as much fire to bring it again to an efficient temperature as when air from out of doors is used. Students were occupied with this problem on a larger scale at the same time, in Baltimore, Md., and they are now working along similar lines in Kalamazoo, Mich. The proposition of the engineers in the latter case is to distribute the hot air through piping systems laid under the streets. One of the features of this system is that in the Summer season, cold air can be furnished to lower the temperature of residences and other buildings. The information at hand does not explain just the form in which this work is to be accomplished, but there is ample evidence that the expert furnaceman will have no occasion to fear a curtailment of his business, while, on the other hand, it is probable that his advice and assistance will be in still larger demand.

Fixing the Furnace.

When pa starts to fix the furnace, all us
children have to be
Just as quiet as if mother had a head-
ache—or a tea;
First pa takes his coat and vest off,
then you hear him cough and say,
"Pay to have it fixed? I guess not!
Now, you children, run away;
Jobs like this I never shirk!"
(That's the way he starts to work).

Mother smiles a sort of worried smile
and shakes her head and sighs;
Then she takes us in the parlor, where
to read aloud she tries;
But the racket pa is making drowns her
voice and so she goes
On upstairs to make the beds or mend
some of our winter clothes.
From the cellar comes a noise
Like a dozen real bad boys!

After a while his work is finished and
pa comes upstairs again;
Cut and bruised and black as any of
those funny minstrel men,
Great big lump upon his forehead,
thumbs all mashed, both eyes
black,
Breathing like he'd run a foot race, hair
filled full of dust and slack;
Limps and holds his sides and groans
Like he'd broken all his bones.

Mother meets him with witch hazel,
bandages and salves and soap,
Says, "I'm awful sorry, Frederick; no-
thing's very bad, I hope?"
Pa just sits and chews his mustache,
then he drags himself to bed,
Has to have the doctor come and patch
his hands and back and head.
Has to pay for that—but still
Furnaceman won't send a bill!

—Cincinnati Times-Star.

Furnaces in the Hardware Store.

By T. J. Doty.

IT is my intention to discuss this question from a business and not a scientific standpoint. My cardinal principles are:

First—Buy a good furnace from a responsible manufacturer.

Second—When you sell a furnace, sell it with a guarantee to heat the building to a certain temperature when the thermometer is a certain height.

If necessary give a bond to qualify the contract, and collect the bill. This will make the furnace heat better and give you a better appetite, and you will sleep better, and it will enable you to use the money and pay cash for your furnaces, thereby getting the benefit of cash buying.

You may think this theoretical and almost impossible, but this has been my policy during six years of experience of selling an average of 50 furnaces annually, and I have carried it out to the letter and find it the most satisfactory to all parties concerned. It has been my policy is to sell a furnace on a fair margin and at a price that will warrant the employment of skilled labor, the using of good material and the doing of a first-class job. I believe this to be fair between man and man, and I do not deviate from this practice. My observation has been that many dealers take a furnace job so chaep that they cannot put in a large enough furnace, employ experienced workmen, use good material, proper sized registers and pipes, set furnace right or collect their bills.

Success or failure depends entirely upon size, location and setting of furnace, size of registers and pipes used and their location, and cold air ducts to the furnace, also mechanical ability and material used, as upon these elements circulation wholly depends. Without perfect circulation the natural and unfortunate result must be failure.

The prime factor in successful hot air heating is circulation. Better results can be obtained from the use of 1 ton of coal with furnace set right and with good circulation than with 2 tons and furnace poorly set and poor circulation, and this item is all important with seller and user, and it has been an experience of gratification to the writer to learn that a fair-minded man can be made to see that it is money saved in the long run to pay an experienced furnaceman his price and have his house well heated and ventilated rather than take a chance with a cheap man, who has but one aim, and that—to get the job.

The Imperial Oxford Range

In every line of manufacture there is one first—one article which all other makers attempt to equal in excellence—one standard article to which all others are compared. That is the position which the Imperial Oxford holds amongst cooking ranges—the criterion of excellence in cooking apparatus. It is the easiest range to sell, because it has more improvements and more conveniences than any other make and is better known. Here are some of them :

THE OVEN SLIDE—A great convenience when basting.
OVEN THERMOMETER—A luxury for both amateur and professional.
DIFFUSIVE FLUE CONSTRUCTION—Saves coal and keeps oven at even temperature.
PERFECT OVEN VENTILATION—Insuring light, dainty pastry and brown roasts.
IRONSTONE LININGS—Almost indestructible.
PATENT FRONT DRAW-OUT GRATE—A stuck or jammed grate impossible.

Let us talk over the wisdom of your selling the IMPERIAL OXFORD RANGE.

attention to detail work. Detail work is very important, and many dealers give no thought to this phase of the business. There should be a good reason for locating a register here or there and for using a smaller pipe in one place and a larger one somewhere else. It is important that no changes be made, as this is annoying, and often expensive to your customer as well as yourself, and invariably results in a botched job.

I have known dealers who never estimated the time of their men in setting a furnace, making pipe, time consumed in travel, waste of material, etc. They figure, if they figure at all, that they have to keep the men anyway, and while they were travelling they were resting, so that they would work harder when they got to their destination, and the waste material they could use to tack over rat holes in the store, and, best of all, they got the job away from the other fellow, this being their sole ambition.

Furnaces can and should be sold the year round, and I believe a dealer should bring this forcibly before his prospective customers and try to close as many contracts as possible early in the season. This, too, may seem theoretical, but the writer finds it quite practical and profitable. By so doing you are enabled to give steady employment to your men, and they become interested, accurate and speedy in this special work, and turn off good work to good advantage, and you are in position to push your work instead of your work pushing you. When the furnace work is all crowded into the latter months of the year it works a hardship upon those whom you are doing work for as well as yourself.

Practical instruction should be given to each furnace user for operating, cleaning and firing the furnace. If he is from Missouri, "show him." For upon this depends the life of furnace, consumption of fuel and temperature of rooms. The writer tries to impress earnestly upon the furnace user the importance of caring for the furnace when it becomes his property.

Progress leads the future by the hand. The furnace is yet in its infancy, and if the rapid strides of progress in hot air heating continue in the future as in the past circulation will be acknowledged by scholars of science to be the true method of heating. To prove my position to be correctly taken relative to circulation being a great and natural method, circulation was first employed in the creation of man and he has been circulating ever since.

quality and perfection of their goods is known to every dealer in the country. The "Universal Favorite" is their leading steel range. It is built like a ship and will last a life time. The "Ideal Favorite" is a high-class cast range made with four and six hole tops, and every range has the firm's guarantee that it will cook and bake to the entire satisfaction of the operator. They also make medium priced steel and cast ranges an an immense line of wood cooks and coal and wood cooks running at all kinds of prices. In heating stoves they make from the most expensive base burner to the cheapest box stove, and their lines of "Oak" stoves and hot blast heaters are very complete. Any dealer who has not received Findlay Bros.' 1903-4 catalogue should write for one, as they claim they only make stoves and ranges that will make a dull store busy and a dull home cheery.

The Home of the Favorite.

THE large new foundry of Findlay Bros., Carleton Place, Ont., a view of which is shown herewith, was built in 1902 and was equipped with the most modern machinery and devices for the production of "Favorite" stoves and ranges. They employ about one hundred men, and the capacity of their new plant is already overtaxed, and this enterprising firm are preparing to enlarge their works to keep pace with the demand for their popular lines of "Favorite" stoves and ranges. Findlay Bros. devote their whole attention to the making of stoves and ranges, and their lines are so nearly right for the purpose they are made, that the high

It Costs Money to do Business.

The marked cost on the goods should not only be the prime cost of invoice, but should include freight as well as the per cent. it takes to do business, or else there is a loss of profit. Should a contingency arise in competition when one opponent might sell one or more articles at less than actual cost, it would be advisable to displace them from your stock until he either finds out his mistake or goes out of business. It would be utter folly to follow his lead. Such competitors generally enjoy but a brief business career.—Ex.

Popular Priced Stoves and Ranges

Are just as necessary to the successful Retail Store Business as the bass drum is to the band. Both give volume to the "output," attract a lot of people and get them stepping your way. It certainly is not hard to do business when you have both the goods and the customers. All you have to do is to "match them up" and take the money. Our goods have that magnetism of price and quality that is irresistible.

FINDLAY BROS., CARLETON PLACE, ONT.

COLTART & CAMERON CO., Limited, Selling Agents for Manitoba and Northwest Terrs.

THE STOVE SALESMAN'S PROFESSION.

PRESIDENT George L. Woodburn of the Pennsylvania Stove Salesmen's Association, emphasized the importance of the stove salesman's mission in life in a striking manner at the recent convention of the association.

He spoke in part as follows :

In the stove business, like other lines of trade, the surroundings that encompass both classes of salesmen are composed of a variety of scenes that frequently occur at the two extremes. The salesman at one time may encounter a warm atmosphere, bright with sunshine, and at another cold and stormy weather. He first holds controversy with the buyer who places a big order, and afterward with the dealer who declares that one stove is all that he will order at present. He is thrown in contact with all classes of men, the rich and poor, the learned and ignorant, and must be prepared to deal with a variety of dispositions and handle each case with diplomacy. The travelling salesman is hurled hither and thither throughout the country by means of different conveyances, both ancient and modern. He is also frequently obliged to plod the lonely way, a distance of four miles, in order to reach Chimney Top Station. His boon companions are the photograph case, grip, time table and expense book. Upon arriving at some towns he is greeted with a smile and hearty handshake, in others a frown and the cheerless salutation, "This is my busy day; I have no time to talk now. Good-by." The word "discouraged" does not appear in his vocabulary, although he may travel 100 miles expressly to see a customer, and upon arriving at his place of business learns that the customer is out of town for the day. The salesman consoles himself with the thought that he will see his man later.

In some instances the salesman instructs his customer in the styles and merits of goods that the market affords and acquaints him with the fact that the price of pig iron has fluctuated; on the other hand, there are cases wherein the customer enlightens the salesman that he can purchase a different line of goods than he has to offer at a more satisfactory figure. During his journey the traveller frequently meets a comrade who has been securing carload orders during a week past, then again he converses with another who bitterly complains that business is dull. After a long day of travel the commercial tourist sojourns at a hotel with modern conveniences, such as steam heat, electric light, elevator, ice water and genial clerk, but the next night he may stop at a wayside inn, where he finds the register in the bar room, the wash room between the pump and the barn, the sleeping apartments reached by three flights of stairs, wherein he places his weary body upon a bed without springs. Such experiences surely are at the two extremes, but the scenes that occur between these extremes display a fair field in which the salesman fulfills his mission.

As we reflect upon such experiences afforded the salesman through his environs we agree with a noted writer when he states that "the selling of goods is the greatest profession in the world, yet how few properly prepare themselves for their great work." In view of this, therefore, the question arises : "To what use may such environs be applied in order that they may assist the salesman to a higher plane in his profession ?" I answer that a salesman so inclined may obtain an education from such surroundings. He is afforded the opportunity to acquire a knowledge of human nature; acquaint himself with current topics; learn the value of money; become shrewd in business transactions; know the country through which he travels; become versed in new productions and improvements made in different kinds of merchandise, adapt himself to existing conditions and keep fully abreast with times. In other words, it is a course in science that will enable him to master his profession, making him more proficient and of greater value to the firm that he represents. It must be borne in mind, however, that in order for the salesman to derive such a benefit he must be willing to receive the knowledge and put it into practice.

The progressive age in which we live demands that men who pose as professionals must have a knowledge of their vocation and the ability to display same. It also brings to our notice the fact that the middle class of society is diminishing, and that the age is fast approaching when there will be two classes only—the rich and the poor. For these reasons, therefore, it behooves the salesman to equip himself intellectually for any emergency that may take place, and a source for such learning is extended to him through opportunities arising from his environments. Did it ever occur to you that in following the vocation of salesmen we are in the same profession as the Morgans, Goulds and Vanderbilts, and some others ? Surely they are salesmen of the highest order. They know the art, and certainly acquired it through a study of surrounding conditions.

Then, again, as we consider this side of the question we must bear in mind that certain environs afford better opportunities for an education than others; also that there are natural born salesmen and made salesmen. The proper location for the man, therefore, may seem essential as well as qualifications to fill the position. A man who is successful in one position may be a failure in another, but because he failed does not necessarily lower his standard. By way of illustration, suppose you employ a mechanic to build a piece of machinery, in which he is instructed to station two cog wheels, one of iron and the other of gold. The machine ready for service is started, and both cog wheels join together in running the machinery. Suddenly the gold wheel breaks and falls to the ground. As you witness the disaster, you exclaim : "Gold is not the proper material out of which to make a cog wheel to run that machinery," but as you condemn the gold wheel you are forced to admit that its intrinsic value far exceeds that of the iron wheel. It was good material in the wrong place.

Telephone City Stoves.

Brantford, the "Telephone" city, has justly made a name as a manufacturing centre and that reputation is likely to be increased by the success of another enterprise launched a year ago. We refer to Telephone City Stoves, Limited, of Brantford, organized last year to manufacture and sell the now famous "Telephone City" top draft, air-tight, wood heaters. The only trouble was to produce stoves enough to satisfy the unexpectedly large demand and many dealers failed to get what they wanted. The stoves produced were spread over Canada from Vancouver to Quebec, and gave uniform satisfaction, and dealers who sold them last year report delighted customers and their intention to handle them this year and to increase their sales. The company are making a large number of stoves for Fall delivery and hope to be able to supply the demand, but early orders will be given the preference.

In addition to the stoves made last year a simple, practical double heater has been designed which cannot fail but capture trade. In a future issue we hope to give an illustration of this stove. Correspondence is desired from dealers and special inducements will be given those who apply immediately for for the sale of these stoves.

STOVES AND RANGES

We have added new moulding shops and other buildings to our plant in order to keep up with the increasing demand for "Treasure" Stoves and Ranges.

THE D. MOORE COMPANY LIMITED

HAMILTON, ONT.

MANITOBA AGENCY:
Merrick, Anderson & Co.
WINNIPEG.

BRITISH COLUMBIA AGENCY:
John Burns,
VANCOUVER.

Busy in Their New Stove Works.

ON a recent visit to Brantford Hardware and Metal had the privilege of visiting the new works of the William Buck Stove Co., of that city. The new foundry is situated in the northeastern part of Brantford, their old premises in the heart of the city not permitting the extension of the plant made necessary by the ever increasing demand for their goods. The need of better shipping facilities was also satisfied by the convenient sidings which reduce the cost of receiving raw materials and of sending out their stoves to the minimum.

The works are complete and modern in every particular and are most admirably adapted for the purposes intended. The moulding shop covers an area of about 60,000 square feet, and it has steel truss roof. It is practically fire proof, while its double rows of skylights make it perfectly well lighted. The ventilation of this department is excellent.

The mounting and finishing department is a three storey building with about 40,000 square feet floor surface and is full of all necessary modern machinery for this branch.

The warehouse is a four storey building of slow burning construction and has capacity for 10,000 tons of stoves.

The factory is lighted by electricity generated on the premises and heated by exhaust steam and the hot blast system. With such facilities, which are second to none, the company feel that they will be in position to take care of their orders with promptness in the future and intend if possible to make their output more perfect than ever.

The "Happy Thought" range still maintains its exceptional popularity, far more of them having been marketed in 1903 than ever before, while the "Radiant Home" base burner and other lines the company manufacture seem to meet the wants of the public, as they are always in demand.

The office and sample room, separate from the rest of the works, is a commodious three storey building facing on Elgin street, Brantford.

The company will always be glad to have their customers and friends call upon them and will take pleasure in showing them a modern, up-to-date stove manufacturing plant.

The Thos. Davidson Mfg. Co.

This firm require no introduction to the Canadian hardware trade as they have for years been widely known as manufacturers of enamelled hollow ware of the very best quality. Their honorable business methods and their progressiveness have made them a very popular firm.

In addition to their enamelled hollow ware they handle a number of specialties such as oil and gas stoves, ice cream freezers and refrigerators. All of these are now seasonable lines.

A. C. Leslie & Co.

ONE of the oldest and most widely known firms in Canada is that of A. C. Leslie & Co., Montreal. For several decades they have been building up an expanding business in metals and they have at the same time established an enviable reputation for fair dealing. Their business has been built up on merit and they now have a hold on the trade which it would be hard to shake.

In conversation recently with a representative of Hardware and Metal, W. S. Leslie expressed his confidence in the outlook for 1904. Earlier in the year there was an impression prevalent among the trade that prices of most metals were likely to fall and in consequence there was a disposition among many buyers to postpone their purchases. Mr. Leslie says that time has shown this opinion to be incorrect and buyers, recognizing this, are commencing to book heavy orders.

Perhaps A. C. Leslie & Co. are best known as the representatives of the old English firm of John Lysaght, of Bristol, who are celebrated as the makers of "Queen's Head" and "Fleur de Lis" brands of galvanized iron. These makers have always put quality first. They have never allowed quality to be sacrificed for price or any other consideration, and it is generally admitted that they set a high standard of excellence.

As representatives of this firm, A. C. Leslie & Co. are now sending to the architects and dealers in builders' supplies a very handsome calendar for 1904. It is specially designed for use on the busy man's desk and our readers should write for it.

Brown-Boggs Co. Enlarging.

The Brown-Boggs Co., Limited, of Hamilton, are building an extension to their works. This has been found necessary owing to the amount of work they have undertaken.

The new building will be used for heavier work. They will extend the lines manufactured by them paying more attention than heretofore to presses, shears and other heavy sheet metal tools.

The plans are now ready and the specifications will be out in a few days. They will then commence building as soon as possible.

Have you tried it?

Ventilation and Heating of Public Buildings.*

PERHAPS there is no branch of public health work which has shown so little progress in its systematic development in Ontario as that of heating and ventilating of public buildings and dwelling houses. There is certainly a lack of well defined methods of ventilating public buildings, many applicable to different buildings, arranged so as to secure at a modeate expense an adequate supply of fresh air in such a manner as to be free from draughts. Then, also, in Ontario there are very few regulations fixing in any definite way the size, mode of construction or number of inmates of houses. Section 15 of the Factory Act states that a factory shall not be so overcrowded while work is being carried on therein as to be injurious to the health of those employed therein; and that every factory shall be ventilated in such a manner as to render harmless, so far as is reasonably practicable, all the gases, vapors, dust or other impurities generated in the course of the manufacturing process, that may be injurious to health. That regulation, however, is very general indeed; it merely states a requirement without giving any information as to how it is to be carried out, and it is to be feared that there is many a case where the impurities generated during the course of manufacture are not rendered harmless by proper ventilation.

Among the school regulations is one which is much more definite in its nature than the foregoing one, and is probably very much better carried out. It states that public school rooms shall have an air space of not less than 250 feet per pupil, with a superficial area of at least 12 square feet, a uniform temperature of 67 degrees F., and provision for a change of air three times every hour.

Judging from results the problem of maintaining house air in a condition of purity necessary to make it in some degree comparable to that of the outside air is in practice a difficult one. The theoretical requirements of a grown person are 3,000 cubic feet of fresh air per hour, introduced into his living room in order that such air may be maintained at a point where the carbonic acid produced by combustion in the lungs shall not exceed six parts in 10,000 of air. The practical problem is to obtain such a method of ventilation as will produce those requirements, or at least will come as near producing them as possible.

It has been found by experience that the air of a room must not be in too rapid movement, probably not more than a half foot per second, and that it must be as far as possible of the same temperature at the floor as at six feet above it.

The amount of heat required to heat a house depends upon climatic conditions, upon the construction of the house and upon the number of renewals of air per hour. The construction of a house should be such that the walls are poor conductors of heat. A wall of wood of equal thickness would be three times better as a non-conductor than one of brick. Also air confined in a close space is ten times as good an non-conductor as wood, and glass ten times better. Double windows, therefore, play an important part in keeping a house warm. The required changes in the air of a room depend, of course, upon its size and the number of its occupants. They can, however, readily be ascertained from the knowledge that an adult person should be supplied with 3,000 cubic feet of fresh air each hour.

The chief of the district police of Massachusetts, who has special charge of the work of boiler inspection, fire-escapes and the heating and ventilating of public buildings, factories, etc., for that state says in an annual report that the practicability of ventilation adequately public buildings admits of no doubt. He says that it can be done by the aid of power, and may be accomplished by means of heated shafts or by fans. He insists that the system of mechanical ventilation may be relied upon with certainty, for by such means a steady inflow of pure air under all conditions and atmospheric changes can be secured.

Good ventilation consists in the proper arrangements and distribution of the ducts of the incoming and the outgoing of the air, and their relation and correspondence with each other, so that the perfect removal of the foul air and the thorough diffusion of the fresh air will be secured.

One system of ventilation, known as the plenum method, concerns itself with the supplying of fresh air, leaving the foul air to make its way out through ducts provided for that purpose. This is done by means of fans or blowers forcing the air into the room.

Another system is directed to the extraction of the foul air by means of the natural laws, depending upon the tendency of warm air to rise. In his ex-

Pandora Range

A Great Success

The Pandora Range, although entirely new on the market last year, was a great success.

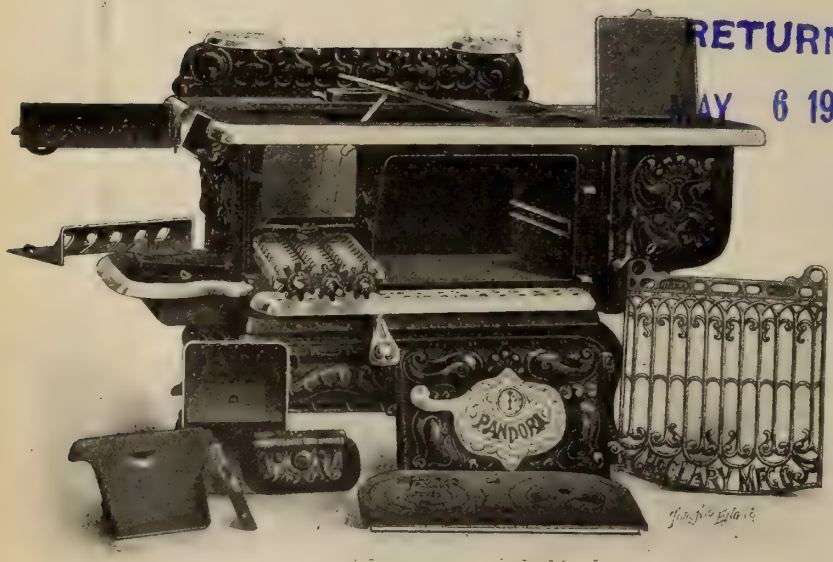
We advertised it generously, and aroused the interest of the ladies in every part of Canada.

The Range, when examined by those interested, bore out our strongest claims, and the many hundreds now in use, are, every one, giving perfect satisfaction.

We will advertise it extensively again this year and dealers who handle the Pandora, will have added a valuable asset to their business, one that brings and holds trade.

Triple Triangular Grates

RETURNED
MAY 6 1904



This new style of Grates has proven a winner.

Cooks, without exception, report that it is much easier to dump the ashes with these grates than with any of the older styles; also that they chop up the clinkers easily and never dump the live coal.

Enamel Reservoir

This radical change in make of reservoir is a winning feature.

All Cooks like the ease with which it can be cleaned, and the different uses it can be put to,—preserving, light washing, etc., etc.

Sizes—Three

The Pandora is made in three sizes: 16, 18 and 20-inch Oven, and each size can be fitted with an 8 or 9-inch top.

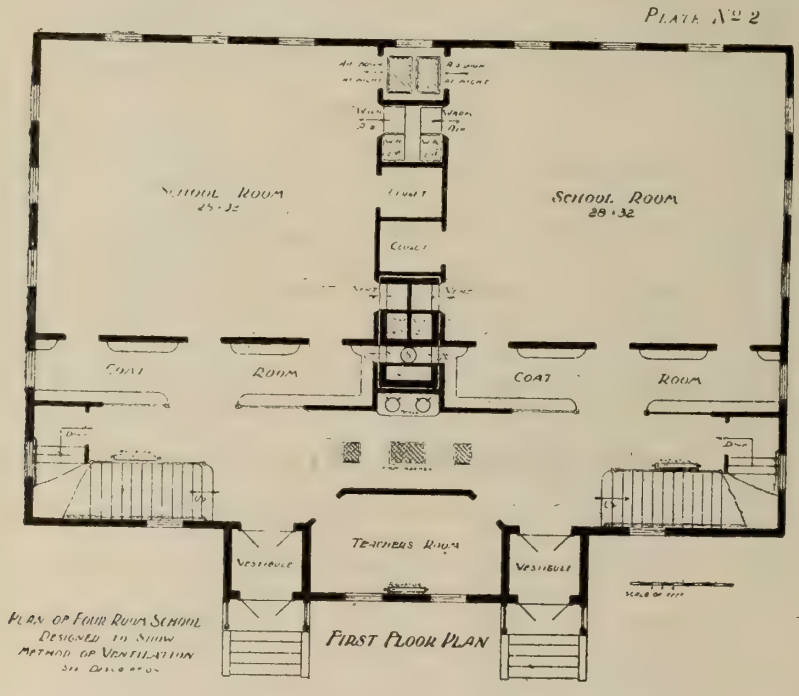
perience the chief has found that changes in temperature are so frequent and the velocity of the wind so variable that unless additional heat is supplied to the duct, the power of the duct or shaft to draw air from the room will fail in many instances to cause upward motion enough to be measured by the anemeter. He finishes by saying that the effective working of any system of ventilation requires that proper provision should be made to promote air currents in the right direction. Care should be taken to have the fresh air inlet of adequate size, since in many instances in public buildings it has been found to be too small.

The difficulties to be overcome by the adoption of any system of heating and ventilation depend upon the operation of



PLAN OF FOUR ROOM SCHOOL DESIGNED TO SHOW METHOD OF VENTILATION

that system. Heating by connection is due primarily to the movement of air upward, heated and by expansion made lighter, and falling again as it is cooled, by the walls and windows. By these currents of warmed air coming in contact with our bodies, we are prevented from cooling with undue rapidity in the same manner as by conduction, the air of the room is cooled by the cold outer walls and widows. It will thus be apparent that with the outer currents of air, as winds blowing against the building, the porosity or openess of the walls and the conductivity of the building material and the doubling of windows, must play all important parts in the heating and ventilation of a building. To minimise the variations of temperature caused by these several influences in different rooms and at different parts of the same room, to maintain the temperature of 60 degrees to 70 degrees F., to secure a humidity of the air approaching 70 per cent. of saturation and to keep the carbonic acid gas in the room at a point below six parts in 10,000, or to secure from 30 to 50 cubic feet of fresh air per minute for each inmate, and to do this economically is the problem of heating and ventilation.

This must be be secured, too, in such a manner that the velocity at the inlet shall not exceed six feet per second, to be reduced to half a foot per second when coming in contact with inmates to prevent the sensation of draughts, although it has been found that a velocity of from 2 to 3 feet per second may be endured without a sense of discomfort.

How much this last point means will be understood, when it is remembered that a room containing 500 cubic feet of air having an inlet of 12 inches square, if supplying 3,000 cubic feet per hour, would have a velocity of .83 feet per second while supplying enough air for only one person. It is thus apparant that in order to maintain the requisite purity of house-air without an excessive air movement, a minimum air space fixed by some at 750 cubic feet per second is necessary, thereby permitting some four changes of air per hour.

Apart from the question of heating and propelling the air into a room, it is clear that the size of fresh air inlets and foul air outlets is of primary importance in the question of the movement of the air. An illustration will make this evident. Assuming that properly warmed air can safely move at a rate of 2 feet per second without discomfort, and that the fresh air inlet occupied a quarter of one wall of a square room 30 feet wide, it will have renewed the air in the room within 2 minutes, or 30 times in one hour. As this air is distributed over the room in columns, four times the volume of that opposite the inlet, the general velocity in the room would be but one-quarter of that at the opening, or six inches per second. If, further, the rate of renewal be lessened it is apparent that the size of the inlet can still be notably decreased if the distribution of the air at the point of entry to the room is assisted by the shape of the inlet. Many of these elements which enter into the problem have been estimated, and were given their place in tables; but it is well that the various elements of the problem be recognized. The consideration of the following problem will perhaps illustrate these elements fairly well.

A school house of four rooms, each to have a cubic air space of 240 cubic feet per pupil for a school of 200 pupils is to be heated and ventilated.

The building having been constructed upon principles before outlined, the problem is to supply means of ventilation for supplying 2,000 cubic feet of fresh air per pupil per hour, or 100,000 cubic feet per hour must be poured into each room with cubic capacity of 12,000 cubic feet. This means 8 1-3 changes of air per hour, or a renewal of air ever 7 1-5 minutes. An inlet of 2 feet square would deliver the requisite volume of air if moving at the rate of 6.94 feet per second. With the ordinary smooth ducts, as when lined with tin, to prevent friction as far as possible, it is estimated that from 20 to 28 per cent. is lost in friction, so that in the present instance the duct delivering air in the amount stated and at the rate indicated should be two feet by 2.5 feet in area.

It is apparent that the forward movement of this volume of air will depend not only upon a steady motive power, by which a regular pressure is maintained in the duct, but also upon there being a free exist duct to conduct the air from the room, which removal of air can indeed be accelerated by an exhaust fan at the outlet of the duct or by a coil of steam pipes in the exit shaft by which the air is heated and thereby made to ascend. As a rule the outlet should

IF YOU ARE INTERESTED IN THESE LINES SEND FOR OUR SUPPLEMENTARY CATALOGUE.

Clare Bros. & Co., Limited, PRESTON, ONT. and WINNIPEG, MAN.

be five-fourths the size of the inlet. Along with the various elements as regards the size of inlets and outlets, it is important to have determined by experiment the most successful points at which inlets and outlets should be placed in any room, in order to promote the even distribution of air introduced.

It is agreed both in America and in England that in ordinary sized rooms such as the ones under consideration that inlets should be arranged on the inner wall, at a point from six to eight feet above the floor while the outlet should be close to the floor in the same wall and in close proximity to the inlet.

This arrangement is based on the fact that the incoming air is usually warmer than the air in the room and therefore tends to ascend, and with the forward movement the impulse along with the higher temperature will distribute the fresh air to the farther side of the room; it being further aided by the lessened pressure caused by the downward movement of the chilled air along the floor to the outlet.

The problem of heating the air equally has in every system proved of much difficulty in practice when a definite amount of fresh air is to be delivered. In estimating the work to be done, it is apparent that an average external temperature must be taken as the basis of ordinary work, and for extremes a system of extra coils must be supplied either in the rooms or in the fresh air chamber in the basement.

A four horse-power gas engine has been proved sufficient to give a four-foot diameter fan enough revolutions to supply 1,000 pupils with 2,000 cubic feet per head per hour.

In the present problem it is assumed that the outer air is to be heated to a temperature as low as 15 degrees F. in the basement cold air chamber, that it is to be delivered in the rooms at 70 degrees F., and that for colder weather steam coils be placed in the rooms for subsidiary heating.

In practice it may be said that it takes the same number of heat units to raise water through any degree of temperature from 32 degrees to 212 degrees F., and proportionately air through any degree from 15 degrees to 70 degrees F., the ratio between air and water being at 212 degrees F., as 1 to 1,000. Now 1,000 cubic feet of air at 32 degrees F. and atmosphere pressure is 81 lbs. Assuming that a cubic foot of water at 212 degrees F. weighs 60 lbs., it will hold 10,800 units of heat. Hence it would raise 3,272 cubic feet of air through 55 degrees F.

It has been estimated that the combustion of one pound of coal will produce 14,000 heat units, and if the combustion in an ordinary furnace amounts in loss to 3,200 units, or more than one-fifth it is found that one pound of coal will raise one cubic foot of water from 32 degrees to 212 degrees F., or will heat 3,212 cubic feet of air. Roughly four pounds of coal will be sufficient to heat the 12,000 feet of air required to change the air of a room, 32 feet by 25 feet by 15 feet, in 7 1-2 minutes. It is quite apparent that the same amount of coal will be required whether the heating be by hot water, steam or hot air furnace, provided the combustion be equally good in all cases and the loss of heat the same, if the mechanism provided supplies the heat to the fresh air all at the same rate.

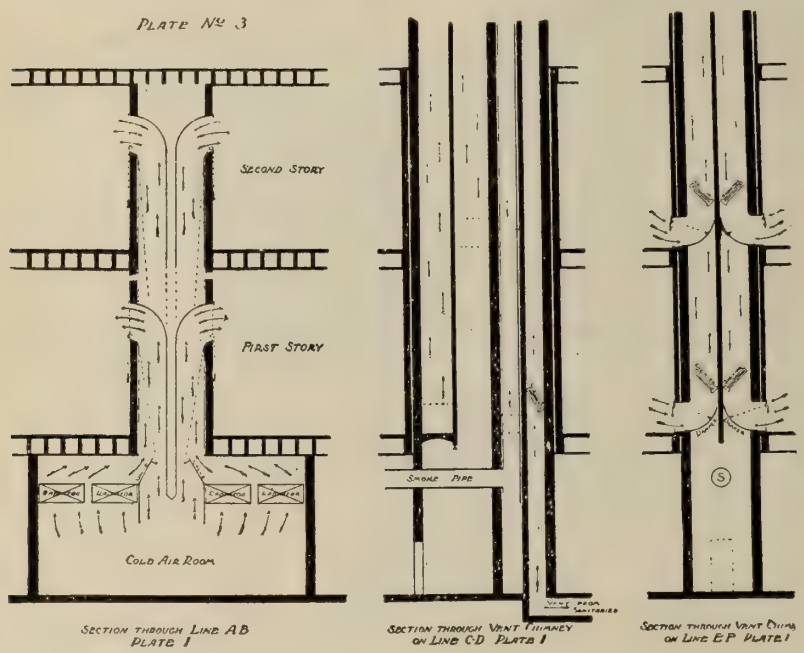
Taking warm weather with cold weather throughout a Winter in Ontario, 25 or 30 tons of coal should supply an adequate amount of heat for a school building similar to one considered.

The plans shown here illustrate how such a school may be heated and ventilated in a simple manner. The basement provides for the boiler room with a 30 horse-power boiler, a cold air room, the coal room, the playrooms and the lavatories.

The ground floor has its hallways, its schoolrooms, its inlets and outlets for air and its cloakrooms.

The first floor, which is not shown here, because of its similarity in arrangement to the ground floor, contains the principal's room and school rooms.

The third plan shows in section the ducts and arrangement of cold air rooms and its valves for regulating the temperature in the rooms, operated either by chain or thermometer.



Send Out the Repairs.

During the stress of Winter many customers have placed orders for stove repairs, and as the need of a strong fire becomes less the old stove may pass unrepaired through the season and the repairs be left in the hands of the dealer, unless he hunts up his customer and delivers the goods, says the Metal Worker. Much space is taken up by these unattractive supplies, and quite a bit of money is sometimes tied up if they are not worked off. To prevent trouble, each package should have the name and size of the stove it is for, as well as that of the customer, plainly written on a strong tag and the tag securely attached to it. Then it can be readily found on the customer's call, or the parts may be sold to another customer, if not called for. If the customer is not responsible, secure a deposit in cash when the order is placed. This will save many a loss. The thing to do at this time, however, is to get the repairs specially ordered out where they belong, and to get the money in.

The stove dealer will have plenty to do who winds up his Winter stove trade properly and makes the right preparation for securing a lion's share of the Spring and Summer trade.

THE STOVE SUPERLATIVE

The Best Stove,

that is, air-tight wood stove, ever devised is

The Telephone City Stove

The business of a heating stove is to give out heat quickly, powerfully and with small fuel consumption. Telephone City Stoves do everything a stove should and can do. Three good points among many are:

1. **The outer top draft which does not burn out.**
2. **The removable top which allows the lining to be easily and cheaply renewed when necessary.**
3. **The patent condenser and check draft which prevents condensation in the smoke pipe and keeps good control over the fire.**

Withal, Telephone City Stoves are low-priced, hence, quickly sold. They pay the dealer well.

Send for fuller description and prices.

BUILDERS' AND CONTRACTORS' SUPPLIES

Some Hints on Extending Trade in these Lines.

MAKING TRADE FOR THE HARDWARE DEALERS

By "Door Knob."

THE present has been termed "The Aage of Steel," for the reason that all the developments of the day seem to increase the usefulness of iron and steel. This is particularly true of architecture and engineering, of building operations of all kinds. The world has come to learn that while the first cost of iron and steel is considerably greater than of wood or stone its greater strength and permanency make it the more economical material in the end.

But what means this to the hardwareman? Much. A study of the present conditions as compared with those of a generation ago will make manifest the fact that all the developments of architecture are to the advantage of the dealer in hardware and metals, if he be willing to meet the conditions in a progressive, business-like spirit.

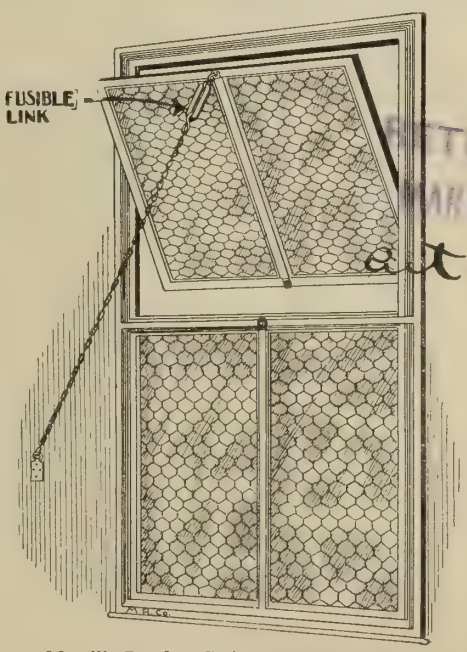
In the rough log cabin of pioneer days there was little which meant business at the hardware or, for that matter, at any store. Then, wooden pegs took the place of nails, masonry fireplaces frequently constituted the heating and cooking apparatus; rough wood composed the ceilings, walls and windows; often the only available plaster was a mixture taken chiefly from the barnyard. Wall paper was an unconsidered quantity.

The industry of the people and the fertility of the soil have combined to so increase the wealth of all classes in the country, however, that each decade has witnessed an improvement in our mode of life and consequently in our purchases. And of this development no feature has been more striking than the improvements in the Canadian home. Probably in no other country is there greater conveniences and comfort than is customary in this country. It is at least safe to say that no country can boast a farming community which is so prosperous and which makes use of their prosperity to ensure comfort for themselves and their families to the same extent as the Canadian farmer. In what country could such a statement be made as was recently uttered by J. W. Smith, of Smith & Ferguson Company, Limited, of Regina N.W.T., that more than half of his hot water boiler and radiator trade was with the neighboring farmers.

All of this makes trade for the hardware dealer. A hundred and one materials have been added to his stock-in-trade which replace materials which he did not handle.

METAL BUILDING MATERIALS.

For instance, the development in use of metallic coverings supplies wooden materials to a large extent, as not one in a hundred hardwaremen could handle lumber to advantage and, as metallic goods can be sold by every one in the trade, the popularity of metal is decidedly an advantage. Do hardwaremen appreciate to the full the benefits accruing to them by these developments? A negative of reply is given by those in closest touch with the trade.



Metallic Roofing Co.'s Fire-Proof Window.

At this season of the year, when the frost is about due to leave the ground and when architects and builders are busy with their plants for thousands of buildings, the hardware merchant should be alert for contracts for building materials of all kinds and particularly for such a line as metal roofing, embossed ceilings, metal coverings, metal laths, fire-proof sashes and doors, etc. In conjunction with these lines they could at the same time do their best to secure eavetroughing work, furnaces, or hot water heating work, not to mention the miscellaneous hardware lines which are used for building purposes or for furnishing interiors. If it be in factory or mill the work is to be done there is a good prospect of securing a sale of metallic goods together with which a supply of skylights could frequently be sold and a system of cornice work installed.

The hardwareman who contents himself with the trade that comes to him cannot, of course, expect to get even a reasonable share of this work. It is work which, practically always, goes to the man who gets after it. So it is frequently the case that the manufacturer of metallic coverings prefer a merchant who may not have the largest trade in hardware in his town but who does a large contract business, particularly in eavetroughing, roofing, etc. One excellent phase of this business is the great assistance rendered the merchant by the manufacturer, who not only stands ready to prepare plans, specifications, and prices but gives the details so thoroughly that any intelligent workman could install a system of metallic covering that further instructions than that given in the specification sent out from the office of the manufacturer. Practically all the retailer has to do is to get in touch with the local builders in his town and secure from them the opportunity to tender for the work, to get measurements, and other specifications, to send forward the details to the manufacturer and, if the contract be secured to have a capable man to instal the goods according to the plans prepared for him by the manufacturer.

A recent invention which, when its advantages are recognized, should be a new line for the hardware store, is a fire-proof window, offered the trade by

the Metallic Roofing Co., Toronto. The frame and sashes of this window are of hollow sheet metal, so built that they may be built into the brickwork either as the building progresses or after completed. The windows are glazed with glass in which wire is embedded through the centre, so that if the glass does break the wire holds it in place, thus resisting intense heat and withstanding the application of water upon the heated glass. The advantage of such a fireproof sash and window is obvious.

Another development of recent years which is bound to add to the hardware dealer's opportunity is the increased use of cement and cement blocks for all kinds of building purposes. The con-

No. 434—Luxfer Prism Co.

struction of pavements, the erection of dams, of bank barns, or silos and even of dwellings of the better class is now calling for great quantities of cement, whereas in the past lumber and stone, two commodities few hardwaremen could handle to advantage. This tendency should be encouraged by every retailer and at the same time the latter should be looking for his share of returns. He should carry a good stock of cement, know how to use it, so as to give the necessary instructions to all intending to use it in a small way.

ORNAMENTAL GLASS.

Another feature of building operations at present is the desire for beautiful effects. This opens to the hardware-man scope for energy in securing orders for ornamental glass. This line is one that means but little labor for the hardware dealer. The work involved is merely finding out from the builder or contractor the size and style of glass wanted, placing the order for the same with the manufacturer likely to give most satisfaction and then delivering the goods in proper condition and at the proper time. Delay in delivery must always be avoided if a trade in this line is to be developed.

To make the most of the line the dealer should study the situation carefully. As in all goods calling for artistic treatment there is a wide diversity of quality in ornamental glass. The dealer must, therefore, get into touch with the various manufacturers so as to be in a position to supply any quality desired. As a rule the soundest policy is to get an order for the highest quality possible for ornamental glass lasts a long time and one is likely to become tired of a cheap article, while the more costly one being "a thing of beauty" tends to be "a joy for ever."

Their New Axe for 1904.

The American Axe and Tool Co., Montreal, are offering the trade, in addition to the comprehensive range of brands, shapes and sizes that they sold in previous seasons, a line which is bound to attract considerable attention. This is to be known as their gun metal finish axes. A chemical preparation has been baked onto the surface of these axes which gives them a finish the same as on a gun barrel or on the gun metal watch which has had such a vogue in recent years.

In addition to giving a fine appearance this finish renders the axe rust proof.

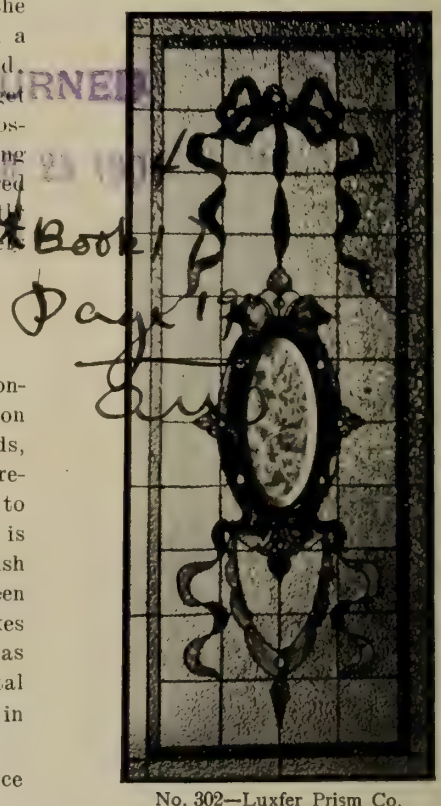
The "bits" of all axes and tools made by this company are of the highest quality of crucible steel, a fact which has contributed in large measure to the high reputation of their goods. This quality of "bit" will be used in the new axe as well as in their other finishes.

All along life's pathway, we see people sidetracked, wavering, vacillating, who waited until their opportunities had gone by, until the tide had receded, until the nick of time was beyond their reach. There is nothing else which will so energize and brace up all the faculties as a habit of quick, energetic decision, and prompt action.—Success.

Lessons of the Baltimore Fire.

SINCE the Baltimore fire many of the most prominent engineers, architects and others interested in building have been studying on the spot the effects of the fire on various buildings and under differing conditions.

Beaumont Jarvis, architect, Toronto, who made an inspection of the ruins expressed the conclusion that the best security against fire is afforded by concrete and brick walls. He declares that the building material of the future will be monolithic concrete, made of crushed bricks and Portland cement, or bricks laid in cement. The following classification of materials, according to their ability to stand fire, is made by Mr. Jarvis on the strength of his observa-



No. 302—Luxfer Prism Co.

tions in Baltimore: (1) concrete and bricks, (2) cast-iron, (3) steel, (4) granite, (5) sandstone, (6) lime mortar.

Though the heat of the Baltimore fire is estimated to have been 3,000 degrees, many of the bricks were as good as new, and one concrete building seems as good as ever.

Much valuable information has been elicited by this means. The Metal Worker publishes three photos which tell their story in vivid manner. In one the effectiveness of fire proof roofing is saving buildings from destruction while adjoining structures were burned, is strikingly presented.

The mass of twisted steel and broken machinery in the foreground repre[illegible] what was one of the three buildings of

the Pratt street power station. In the background another of the three buildings is shown to be in perfect condition. The third is similarly intact. The three structures were built alike, with but one exception. The first building had a non-fire proof roof. It was made of 2-inch planking covered with slate. It was completely consumed and the heat of the burning roof buckled the steel roof trusses, pulling the brick wall in upon the machinery and putting that portion of the station out of service. The other two buildings are now as good as ever, all of the machinery being left intact, and from these the electric power for a large portion of the city is being produced.

Two other photos demonstrate the fact that while the modern system of steel frame construction for large buildings is generally sound, there are some details of the equipment of fire proof buildings which the Baltimore experience has proved incorrect. These were taken on the seventh floor of the Calvert building. They draw attention to two bad features of fire proofing which are commonly followed. One is the practice of having a portion of the column unprotected for the purpose of imbedding electric switchboards and similar devices, and the other is the practice of running the piping between floors between the steel column and the fire proofing.

Both of these mistakes were made in connection with the covering of this column, and as a result the fire soon found its way to the column and produced the effect shown in the engraving. In the columns shown all of the terra cotta was evidently shattered some time before the fire had burned itself out on this floor, as is shown by the violent buckling. The pipes running beside this column were of fairly large diameter. They were used to convey gas, water, steam and electric wires, and were placed close to the steel, with the fire proofing immediately outside of them. The heat of the fire, in raising the temperature of the entire mass, had a greater effect upon the piping, which it caused to expand considerably. As there was no room between the column and the fire proofing to allow for this, the piping steadily bulged the terra cotta as it continued to expand. The loosening of the latter admitted the heat to the piping still more readily, and further rapid expansion ensued. Finally this became so great as to knock the fire proofing away from the column, leaving it exposed to the mercy of the fire. The warping of the piping is clearly illustrated in one of the views, which illustrates a section of the floor where evidently the action of the heat upon the tubing was slower.

It is suggested that this obstacle can be overcome by simply placing a double covering around the column, one fitting against the column direct, and the other surrounding the encased column, leaving room for the piping. The entire affair, it is suggested, should be filled in with concrete, thus leaving no air chamber to serve as a flue for carrying the heat and flame. These views also show the manner in which the under web of the terra cotta segmented tile broke away owing to their thinness. They also show the unprotected lower flanges of the I-beam floor girders due to the cracking of thin terra cotta covering.

The Sanderson-Harold Co.

DURING the next six or eight months the hardware trade will be especially interested in the product of such firms as the Sanderson-Harold Co., manufacturers of refrigerators, screen doors and windows, Paris, Ont. The premises of this firm include a main building about 200 feet long and from 50 to 90 feet in width; also brick boiler and engine room 30x50, with dry kiln 40x20, attached. There are two large storehouses, 50x100 and 40x60 respectively (both two storeys), besides lumber sheds and out-buildings. The works are equipped with all new machinery, being up-to-date, and giving employment to a force of from 45 to 50 skilled workmen. The main building is used entirely for manufacturing, and is equipped with all modern conveniences, including adequate fire protection, and lighted by electric lights.

Of refrigerators the company make from 16 to 25 per day, the line including thirteen sizes of the highest grade for domestic use, all of them being lined with opallite glass 7-16 in. thick. The capacity for screen doors and windows is 300 of the former and 600 of the latter per day. Over 100 varieties of these are offered to the trade.

The reputation of this firm extends to every province in the Dominion, and while their largest trade is in Ontario they have an excellent business in Quebec and the Maritime Provinces, as well as in Manitoba and the Northwest. In addition to their large connection with wholesale and commission houses the firm keep a representative on the road in Ontario, while a considerable business is done in mail orders.

Any readers of this paper who have not secured copies of the illustrated catalogue issued by the Sanderson-Harold Co. are invited to write for one and for information regarding the terms offered and the firm's up-to-date method of doing business.

The Increase in Use of Cement.

While the steady expansion of the production of pig iron which has shown an increase of 100 per cent. in a decade, has been the subject of almost universal comment, there is certainly more cause to wonder and to comment upon the production of Portland cement, which, as shown by the last report of the Mineral Industry, was a well established industry in 1894, with 24 factories, and has grown 2,606 per cent. in eight years, the factories having increased three-fold, and some of the larger ones eight-fold in capacity. Such a growth is almost beyond description, and when we turn from the growth of the industry itself to the growth of the uses of the product of cement, the mind is still more led to wonder and surprise.—Ex.

The Manufacture of Wire Nails.

ONE might reasonably conclude from the uniformity and low cost of wire nails that their production is as simple as they are cheap.

A visit to one of the several nail factories in the Dominion, however, would soon disabuse one's mind. There is need for ingenuity, mechanical skill and chemical knowledge in a wire nail factory. Added to these there must be keen business acumen, for in the manufacture of a line where the cost of the finished article is at times so near to that of the raw material it is essential that the lowest point of economy in both factory and office be ever maintained.

In a visit to the works of the Graham Nail Co., Toronto, Hardware and Metal was privileged to study the operation involved. The raw material is rolled rods, which come direct from the steel mills in large bundles. These rods are of a soft, tough texture which makes the operation of cutting them extremely difficult. They are also desirable to reduce the size of the wire. So in order to bring them to the smaller size to make them quite uniform, and to make them harder, more brittle, they are "drawn." This, in turn, necessitates their being chemically cleaned.

When the large bundles are brought from the storehouses they are at once immersed in a large acid vat to remove all scales and other foreign matter from the surface of the wire. When taken from this vat they are scoured by a strong force of water. At one time it was thought only necessary to immerse the wire in water when taken from the acid bath but, as Mr. Howland, manager of the company, explained, this procedure was found insufficient and the more forceful method of a strong stream of water was substituted.

After scouring, the wire is immersed in a lime vat. For this operation great care is essential. In the first place a special brand of lime is necessary, ordinary lime having been proven unsatisfactory. It is imperative, too, that the time the wire be left in this vat be gauged correctly. Then, after the wi has been allowed to dry it is placed in the "baker" where it is left from two to twelve hours. Here again strict attention must be devoted to the time. As a house-wife watches a cake or a roast, so must the wire be watched while in the "baker."

If left too long or too short either in the lime vat or in the "baker" the result would be that the temper of the wire and of the nail would be spoiled.

The wire is now ready for the drawing bench. Here a strong steady pull forces it through a hole so small that in the operation it is reduced from a half to a full size. Each time this is repeated it is reduced in size and made harder in texture. When the desired size and temper is reached the wire is ready for the nail-making machinery. As one enters the room where this machinery is at work the noise is deafening. The sizes of the machines vary almost as much as that of the product which runs from $\frac{3}{8}$ inch nails to 9 inch spikes. The work is automatic and incessant.

At first thought one might conclude that the perfection of the machinery was such that little skilled labor would be necessary here. But the error of this view would soon be evident. The dies for cutting must be right; the adjustment of the machine correct. Then skilled mechanics must be kept constant watch to prevent a breakdown of the intricate mechanism. All one sees, however, is a roll of wire constantly unwinding and a machine cutting nails so fast that the eye cannot follow them quick enough to count them as they fall.

As in modern factories of almost any line, machinery is being constantly introduced from time to time. The Graham Nail Co. have recently installed several machines of the latest, most rapid type and have by doing this so increased their capacity that the wire-drawing plant must now be largely extended.

From the machines the nails are removed to large iron drums or cylinders which are partly filled with nails and sawdust. When the power is turned on these cylinders revolve with such force that the sawdust absorbes all dirt from the nails and gives a clean, glossy appearance. On this point as well as on the strength of their product the Graham Nail Co. exercise great care, with the result they have built an enviable reputation for their nails.

From these cleansers the nails are takes away in a large iron truck constructed to simplify, to save expense even in the kegging of the product. From the factory one moves on to the store-house, where at this season of the year are vast piles of tightly filled kegs awaiting the Spring rush.

"This bespeaks confidence in the Spring," suggested Hardware and Metal. "Yes, we feel there is reason to expect a good season. We have the product at the price," was the reply from Mr. Howland, "and the people need the goods."

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories foundries or other works, railway or mining news, etc. All such correspondence will be treated as confidential when desired.

THE name of the Morris-Field Rogers Company, of Listowel, Limited, has been changed to the Morris Piano Company, Limited.

Lumbering operations in New Brunswick this Winter have been very successful.

The Blonde Lumber Co., Limited, have increased their capital from $80,000 to $125,000.

The St. Thomas Brass Co., Limited, have increased their capital from $25,000 to $100,000.

A concrete bridge is to replace the present iron one over the Jack river, near Richmond, Ont.

The Boyce Carriage Co., Winnipeg, are erecting a five storey brick and stone building on Ross avenue.

The Star Printing & Publishing Co., of Toronto, Limited, have increased their capital from $100,000 to $200,000.

The name of the Canadian Canners' Consolidated Company, Limited, has been changed to Canadian Canners, Limited.

The R. J. Doyle Manufacturing Co., manufacturers of paints and varnishes, Owen Sound, Ont., have assigned to E. Jackson.

The plan to consolidate the British Columbia Copper Co. and the Snowshoe Copper Mine, Limited, has been abandoned.

J. A. Hurteau & Cie., Limited, Montreal, have been incorporated with a capital of $50,000, to manufacture musical instruments.

The German Steel Syndicate has finally been organized. The smaller manufacturers, whose output comes below 1,000,000 tons annually, have been excluded.

The Columbia Shoe Dressing Co., Limited, Montreal, have been incorporated with a capital of $50,000, to manufacture and deal in leather, rubber and kindred materials.

The dry kiln, malt house and elevator of the Eaton Brewery and Malting Co., Owen Sound, has been destroyed by fire. The estimated loss is $20,000, partly covered by insurance.

C. G. Hagedom, a prominent manufacturer of Berlin, Ont., says that an American concern has purchased property in Berlin with a view to establish a factory for the manufacture of rubber coats and rubber goods in general.

The C. P. R. will commence early in the Spring to increase the capacity of the grain elevator plant at Port Arthur. The addition will consist of 18 tanks which will give the elevator a storage capacity of 1,500,000 bushels.

Two Belgian capitalists propose to establish a zinc smelting plant at Fernie, B. C. The site will cover 50 acres of ground, and the plant will cost $150,000. This is a well chosen vicinity for a smelter since there is a coke oven plant in the district.

The Eastern Townships Mining & Smelting Co. propose to establish a smelter at Sherbrooke, Que., to cost $25,000, with a capacity of 60 tons daily. The conditions are that the city grant a bonus of $10,000 and exemption from taxation for 10 years.

The Gillespie Fur Co., Limited, Toronto, have been incorporated with a capital of $200,000, to deal in all kinds of furs, skins, raw or dressed, domestic or foreign. The directors are: F. R. Gillespie, J. Gillespie, H. H. Gillespie, and A. C. Gillespie, all of Toronto.

The Fort William City Investment Company, incorporated under the laws of the imperial parliament of Great Britain and Ireland, has been granted a license by the Ontario Government to acquire, hold, mortgage or otherwise dispose of some real estate in Fort William, Ont.

Clark Lithograph, Limited, Toronto, have been incorporated with a capital of $150,000, to carry on business as printers, publishers, lithographers, engravers, electrotypers, bookbinders, etc. The directors are: F. L. Clark, T. J. Clark, H. E. Miller and T. A. Rowan, all of Toronto.

John Island Tug Co., Limited, John Island, Ont., have been incorporated with a capital of $8,000, to own and navigate steam and other vessels. The directors are: G. H. Moulthrop and W. C. Moulthrop, both of Bay [illegible] Mich.; and John McEwan, of Sault Ste. Marie, Mich.

The Canada Wood-Grain Co., Limited, Toronto, have been incorporated with a capital of $40,000, to deal in wood, paper, grain and fillers, and to manufacture furniture. The directors are: N. W. Tovell, J. T. Eastwood, J. H. Duke, S. Gillespie, and E. E. Wallace, all of Toronto.

A despatch from Ottawa says that the Singer Sewing Machine Company are likely to establish their Canadian headquarters at Deschenes, six miles from Ottawa. It was announced some time ago that the company had decided to locate at St. Johns, Que., but it seems that the plan has been abandoned.

The mine owners in the Kootenay District, B. C., are hampered by the lack of smelting facilities, and the Victoria Colonist predicts that there will be a smelter erected in the vicinity of Creston within the next twelve months. It is claimed that there is also room for a zinc reduction works in the Kootenay District.

The Peoples' Heat, Power and Light Co., have been organized at Fredericton, N. B., and the directors have been authorized to make arrangements for the installation of plant at once. The directors are: T. C. Allan, W. P. Chestnut, F. B. Edgecombe, P. S. Thomas, A. B. Kitcher, E. B. Winslow and A. J. Gregory, all of Fredericton.

Hamilton Motor Works, Limited, Hamilton, Ont., have been incorporated with a capital of $40,000, to manufacture and deal in gasoline and electrical engines and motors, and to carry on the business of a tool maker, brass and iron founder, metal worker, machinist, smith and electrical engineer. The directors are: W. C. G. Snaat, J. A. Turner, and W. A. Logie, all of Hamilton.

The Ludlam, Ainslie Lumber Company, Limited, Leamington, Ont., have been incorporated with a capital of $50,000, to carry on a planing mill and lumber business, and to manufacture, buy and sell all kinds of wood work, woodenware and carpenters' and builders' supplies. The directors are: C. Ludlam, Jas. Ainslie and R. Bennie, all of Leamington; J. H. Ainslie, Sarnia; and W. G. Ainslie, Comber, Ont.

American Motor Car Company, Limited, Berlin, Ont., has been incorporated with a capital of $50,000, to carry on the business of manufacturing and dealing in gasoline and electrical motors, automobile carriages and boats, and to carry on the business of a tool maker, brass and iron founder, metal worker, and machinist. The directors are: M. Good, N. Good, J. Good, and Margaret Good, all of Berlin, Ont., and I. Neuber, Waterloo, Ont.

The first annual report of the Montreal Steel Works, Limited, formerly the Canada Switch & Spring Co., has been presented to the directors. The report shows the first nine months of the year to have been quite satisfactory as regards business, but during the last three months of the year the demand fell off owing to the change in the general conditions of the steel trade. However, in spite of the last three months' poor showing there was a net profit for the year of $105,581.

Department of Railways and Canals, Canada

WELLAND CANAL.

NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Electrical Apparatus," will be received at this office up to 16 o'clock, on Monday, the 28th March, 1904, for the furnishing and erection of Arc Lamps, Regulators, Switchboards, and other apparatus, appliances and materials required for the Welland Canal.

Plans and specifications can be seen on and after Monday, the 14th March, at the office of the Superintendent Engineer of the Welland Canal, St. Catharines, Ont., at the office of Roderic J. Parke, Esq., Consulting Electrical Engineer, 52-53 Janes Building, Toronto, and at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa. Forms of tender can be obtained at the places named.

The Department does not bind itself to accept the lowest or any tender. By order,

L. K. JONES,
Secretary.

MANUFACTURERS OF

MODERN MACHINE TOOLS, PRESSES, DIES and SPECIAL MACHINERY.

MACHINERY

MACHINERY TRADE PROSPECTS IN CANADA.

By "Prognos," Toronto.

CANADA is unquestionably expanding at a pace inconceived a few years ago. Her fertile wheat belt and her active immigration policy has turned towards this country the attention of the world with the result that her broad acres are being taken up at a remarkable rate. Capital, too, has been quick to note the prospects of the new country and has made possible a development of the mineral and forest resources of the country which has been almost as exceptional as the agricultural development.

In consequence a great impetus has been given to all industries in existence and to the establishments of new ones within the Dominion. The cumulative force of this development has brought the country to the point where another transcontinental railway and hundreds of miles of branch lines are imperative. This construction of railway lines through the heart of our undeveloped regions will, as it has ever been in the past, be followed by commercial and industrial expansion to such an extent that Canadian machinery interests have every reason for confidence as to the next few years.

REQUIREMENTS OF MINING.

The rapid extension of mining in every section of Canada from the coal deposits of Cape Breton to the gold areas of the Yukon create a demand for mining machinery of all classes. In the mining districts there is a constant need of continually equipping new plants for the smelting and reducing of the different ores, and also to take the place of old machinery, either worn out or superseded by a more economical process. The demand for dredges of all kinds is also increasing rapidly, because of the establishment of new mining claims and the extension of old ones.

At the present time very little mining machinery is manufactured in Canada, and in order to properly foster the mining industriy there is no duty on smelting or reducing machinery. This seems perfectly just, and not until mining machinery is manufactured in Canada in sufficient quantities and of a quality to compare favorably with American manufactured machinery is it to be expected that a duty should be placed on that class of machinery. Otherwise the country would be fostering one industry to the detriment of another. This is surely one line in the machinery manufacturing industry which offers scope for development.

More and more is electricity being employed as a motive power in all mining operations, and it is probable that it will be in mining machinery where electricity is used as a motive power that development will take place. Smelting ores in the electrict furnace is receiving no small share of attention at the present time. The action of the Government in sending commissioners to Europe to investigate the commercial feasibility of the process will in all probability lead to the development of iron ore deposits in different parts of Quebec and Ontario which are so isolated from any direct means of communication that it would be unprofitable to transport fuel for the smelting of the ores in the blast furnace. The great number of rivers and waterfalls in these districts where electric energy may be developed at a comparatively small cost was the incentive for enquiring into the electric process of smelting. Of course it depends upon whether the process will prove commercially and practically possible. However, there seems to be every possibility of its being so from the tests made in European countries. The introduction of this process into Canada would mean an increased demand for dynamos and water turbines together with the necessary fittings necessary for their installation and the installation of the electric furnace. In the manufacture of electrical machinery Canada has made rapid advancement during the past two or three years. During the latter part of the year 1903, there was an exceptionally good demand for dynamos and motors, which continued right up to the end of the year. As a rule manufacturers have experienced slack times during the first five or six months in the year, the real business of the year not commencing until August or even September. This was so last year, but this year is proving an exception. At the present time manufacturers say that they have as much business, or nearly as much on hand as they had during October, November and December of last year.

WOOD-WORKING MACHINERY.

The lumbering industry is one of the most vital to Canadian prosperity. This industry and the ones closely allied, such as the planing and shingle mill industries, are growing steadily in unison with the general progress. Many new saw mills, planing mills, and shingle mills are being started in newly developed sections of the country, and consequently the demand for wood-working machinery is increasing steadily. New Ontario and the newer parts of old Ontario are making numerous demands for outfits for these mills. Northern Quebec, the Northwest Territories and British Columbia are not behind in the development along this line, and wood-working machinery is continually being shipped to those parts. The running of new railway lines into wooded districts helps very materially in the development of these industries, since a saw mill or planing mill may be erected close to the railway which affords an easy means of outlet for their products.

IRON-WORKING MACHINERY.

The towns and cities of the Canadian Northwest, of British Columbia, of New Ontario and other new districts of Canada are growing rapidly. This means that there will be a rapid increase in the demand for mechanical devices of all kinds. This means that new foundries and machine shops will have to be established, and that the output of older ones will be increased materially. It then follows that there will be an increased amount of iron-working machinery and also power machinery required. Machine tools especially will feel the effects of this. A prominent machinery firm says that business in these lines has

doubled during the past year. The enormous expansion of freight and passenger traffic on present lines and the steady construction of new railway lines must create an exceptional need for new rolling stock. Whence will it come? From Europe, from the United States or from factories within our own borders?

In anticipation of this condition locomotive works were built in Montreal which from the standpoint of equipment or of site compare favorable with the best in the world. Financial troubles have, however, prevented the company, the Locomotive and Machine Co., from starting operations. It is therefore with satisfaction that Canadians learned that the American Locomotive Co. had bought out this plant and had announced their intention of operating them, possibly to supply foreign trade as well as Canadian.

Locomotives do not comprise all the rolling stock; cars will be needed, and consequentiy all the car manufacturing plants should reap a portion of the harvest. The extension of railways will also mean that there will be a necessity for the establishment of new repair shops. The equipment of these will make demands on the iron-working machinery market.

From New Ontario comes the report that rolling mills are to be established there. On the new Ontario and Temiskaming Railway 75 miles north of North Bay, are some iron mines owned by D. O'Connor of Sudbury and T. B. Caldwell, of Lanark. The ore in these mines is claimed by Mr. O'Connor to be of the best Bessemer grade. Close by is the Montreal River on which there are some valuable water powers. Mr. O'Connor says that if the electric smelting process proves as great a success as is expected they will have rolling mills there turning out rails within three years. It is understood that the plans for an electric generating plant and an electric smelting plant are now under construction. Should these rolling mills be established it would be a very convenient place to obtain rails for a section at least of the Grand Trunk Pacific, since it is only a run of 100 miles over the Tamiskaming Railroad to the proposed route of the line.

POWER GENERATING MACHINERY.

Engines and boilers will be in demand as motive machinery, according as industrial development takes place. Those are the requirements of industries of all kinds, except where steam's great rival, water power is used. Since industrial development may be counted upon, a continual demand for engines and boilers may also be relied on. However electrical power generated by water power and transmitted to the required place is making deep inroads into the territory of the engine and boiler, and from all indications at the present time it will make still deeper inroads. The way the mighty Niagara is being harnessed for the development of electric energy indicates that steam's great rival is preparing for war, and things look serious for the steam engine and boiler. However they will continue to be in demand for some time to come yet, although electric power may drive them from the field in many instances.

Great attention has been centred during the past year on the tubo-generator. The Westinghouse Machine Co. of Pittsburg, claim that the turbine is not only the steam engine of the future, but that it is the steam engine of the present. This would appear to be correct from the number of turbo-generators they have already turned out and sold. In the turbo-generator the generator is run directly by the shaft from the turbine engine. Up to the present time no turbo-generators have been manufactured in Canada, but the Canadian General Electric Company have secured the Canadian patent for the Curtis type, and already have a contract from the Toronto Electric Light Co. for the construction of two of these turbo-generators. The steam turbine constitutes another rival of the reciprocating engine.

MACHINISTS' SUNDRIES.

There are several large firms in Canada manufacturing machine tools, also there are a number of large firms manufacturing wood-working machinery, boilers, engines, etc. On the Canadian market for this machinery these firms hold their own very successfully. However Canada is lacking in plants for the manufacture of machinists' sundries, such as gauges, scales, calipers, etc., and consequently American firms control the Canadian market. Is there not room for the establishment of such a plant in Canada? Is there any reason why Canada should not compete on her own market with American firms in that line as well as she is now doing in the machine tool line and others? Of course there are one or two American firms whose products in these lines have obtained a pretty firm hold upon the market, but the same was the case with machine tools, though in a lesser degree perhaps, when Canada could not boast of her maunfactures in that line as she now can.

B. K. Morton & Co.

ATTENTION is directed to the advertisement of B. K. Morton & Co. on page 49, regarding their "B. C." steel for miners' drills, lathe tools, chisels, etc. "Morton" steel was introduced into this country in 1893, and it was from the first found satisfactory, and has been worked successfully by leading mines between Vancouver and Halifax, large orders being the result. Their specialties of fine tool steel, such as "Alpha" high speed steel; "L" special steel for hard surfaces and "J" quality chisel steel, etc., are to be found in most of the leading engineering plants throughout Canada. The "Alpha" high speed steel for lathes and planers, made by B. K. Morton & Co., is rightly named, as we understand it is placed first on the list of high speed steels by railways and engineers in various parts of the world. Wherever there is a lathe it is the desire of the company to have at the least one bar of this steel.

The following commendation of their steel has been given this firm by the John Bertram & Sons Co., Limited, Dundas, Ont.:

Messrs. B. K. MORTON & Co.,
Sheffield, England.

Gentlemen—We have tested and used your "Alpha" High Speed Tool Steel with very satisfactory results We consider your steel as good as any other of the high speed steels which we have had in use, and can recommend it to anyone as being first-class. Yours very truly,

THE JOHN BERTRAM & SONS CO,, LTD.

Similarly strong testimonials have been received from other Canadian consumers, notably the Le Roi Gold Mining Co., Rossland. The B. K. Morton & Co.'s chisel steel ensures economy in work and men's wages, on account of its durable nature. We understand the representative of the firm is Mr. D. W. Clark, of box 520 P. O. Toronto.

Canada's Mica Deposits.

At the recent meeting of the Canadian Mining Institute in Toronto, E. T. Corhill, of the Kingston Mining School, said, in an address on mica mining in Canada, that there were three mica producing countries in the world—India, Canada, and the United States. He said that the deposits in Canada were commercially of much more value than those in the United States, and could, if properly developed, bring in a handsome revenue to the country. The mica deposits of Canada are in Ottawa, Frontenac and Lanark counties in Ontario, and in Northern Peterborough.

THE MONTREAL STEEL WORKS.

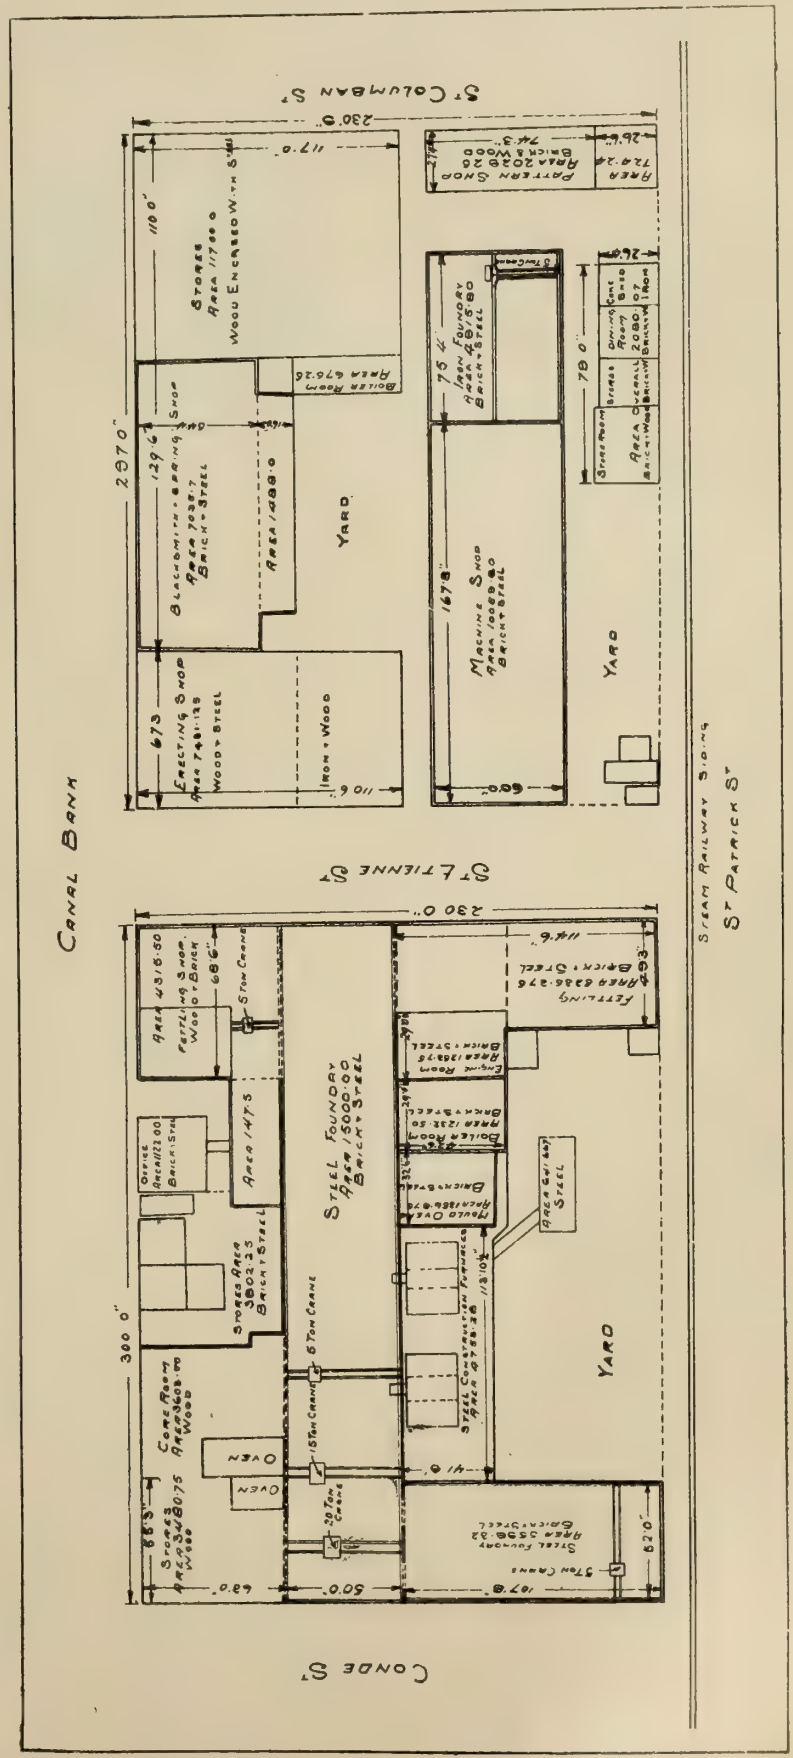
THE Montreal Steel Works, which have recently taken over the property and plant of the Canada Switch and Spring Company, possess to-day one of Montreal's most important factories. The equipment is so complete and the arrangement of the buildings and departments so convenient that many Hardware and Meal readers will be interested in a description of their works which the accompanying plan should make quite clear. The property is most advantageously located as regards shipping facilities and the labor market. Situated in Point St. Charles, the home of the mechanic, the factory is bounded by the Lachine Canal on one side and a railway siding on the other.

The works of this company are divided into three distinct departments, viz., the Steel Castings Department, the Switch Department and Machine Shop, and the Spring Department. The steel castings department occupies the whole of the property between the G.T.R. tracks and the canal bank and Conde and St. Etienne streets or about 1 3-4 acres.

The foundry proper extends down the centre of the whole length of this property and is a large steel and brick building of the most modern construction 50 feet wide by 300 feet in length. It is served by three electric travelling bridge cranes of 25, 20 and 5 tons capacity, respectively, the large 25 ton crane having an auxiliary hoist of 10 ton capacity. These cranes are of the latest type specially designed for steel foundry work with enclosed dust proof motors and all the different parts of a most substantial and simple construction.

It is in this building that most of the moulding and all the casting is carried on, although another steel and brick building on the south side, and forming an L with the main building, is also used for the lighter class of moulding. This building is also served with an electric crane with air hoist. On the same side of the main building are two 18 ton acid open hearth steel furnaces with the necessary gas producers, etc. These furnaces are built from designs furnished by an eminent Pennsylvania engineer and are very rapid in their action, having a total capacity of about 150 tons of steel per day. As a rule, however, they are used separately, one being closed down for repairs while the other is working.

Behind the furnace building is the stock yard where all the necessary material is stored in such a way as to be conveniently selected and graded for the purposes for which it is required.



Ground Plan of The Montreal Steel Works.

Next to the open hearth furnaces, and under the same roof, are the requisite dry stoves for drying the moulds before they are placed on the casting floor. Beyond these again are the boiler room and power house for the entire plant, comprising a Corliss engine and motor

generator set, one steam driven and one belt driven air compressor, etc. The remainder of this side of the property is covered by a two-storey building (50 feet by 115 feet) in which is placed special machinery required in a modern steel foundry, such as cold saws for sawing the heads and gates off the castings, shapers, lathes, etc. Each of these machines is driven separately by an electric motor. The upper storey of this building is used as a pattern storage for customers' patterns.

On the north side of the main building are the sand mixing plant, core rooms, core ovens, pattern rooms, coke storage and cleaning rooms. The latter are furnished with compressed air chipping hammers for cleaning the larger castings; the smaller castings are put into rumblers which are also located in this building. This building is also served by a combined electric and compressed air travelling crane. In connection with this department is a chemical laboratory in which a complete chemical analysis of every heat of steel is made and recorded from day to day. All the material coming into the works such as pig iron, scrap, spring steel, rails, etc., is also subjected to chemical analysis. Physical tests of the steel are also made from time to time on an Olsen testing machine.

In the blacksmith and spring shop, the machinery and testing apparatus are specially designed for the purposes for which they are required. The spring furnaces are equipped with patent stokers which are giving good satisfaction. This department turns out springs of all kinds for steam and electric roads and for the general machinery trade.

The chief output of the machine shop is all kinds of steam and electric railway track work, including switches, frogs, diamond crossings and interlocking material, also street car trucks of different types. Here the machinery is specially selected with the object of securing the greatest output at the lowest possible cost, a great many of the machines being specially designed for the use of high speed tools steel on such material as rails and other high carbon steel. An overhead carrying system operated by compressed air is used throughout these works.

In addition to the above, there is a well equipped pattern shop and ample storage beds and overhead apparatus for loading and unloading material, the whole making a very complete plant.

Canada is still a young country, industrially, and as yet she can not show many industrial establishments whose output will rival in volume that of the immense factories of Great Britain and the United States. But her captains of industry believe in equipping their plants in the most up-to-date manner. A good example of the results of this progressive spirit is the splendid plant of the Montreal Steel Works.

He Secured an Assistant.

A machine shop proprietor of rare astuteness has decided that every man holding a position of responsibility must have an understudy—some one who can carry on the routine of the job in case of the principal's absence. This arrangement enables the one to originate and institute better methods while the other preserves the working conditions already established. Either is helpful to the other and both are requisite in carrying out the plan. The one may be absent but there is not then a helpless void. Things are kept moving and the system stands sturdily on its foundations. There is nothing unreasonable about such an arrangement. It is nothing more than the extra reamer or drill another length of belting or a can of oil

A man who has slowly and persistently worked his way up the ladder of promotion in that shop told me his story: "One day the proprietor came around and suggested that I get some bright young fellow as assistant. I worked my way up from the bench and I know my own failings. Good jobs are not so plentiful that I must start in to show the boys how to fill my shoes. I didn't warm up to the idea. A couple of months later the old gentleman was round again and said: 'I see you have not got your assistant yet.' Of course I told him of the difficulty of striking the right man, etc., and he looked convinced but weary. Before he went he left me a parting shot: 'Better get one soon or maybe there will not be a place for him to fill.' I got the assistant pretty quick. I consider I can see as far as most people at a really critical time."

The Modern Blast Furnace.

IN the early days of blast furnace practice, the hot gases were permitted to escape at the mouth of the furnace, but in later years the wastefulness of this practice was recognized, and the mouth of the furnace was closed by a massive cast-iron cup-and-cone arrangement, which is only opened for a fresh charge, says Scientific American. In the latest designs there are two cones, one above the other, forming a chamber between them, on the principle of the air-lock, by which arrangement the escape of the gases is entirely prevented. A large steel pipe or flue which curves out at the right near the top of the furnace, conducts the gases downwardly to a big drum or dust-collector, and from this the gas is lead to what are known as the Cowper hot-blast stoves, of which there are four to each blast furnace, with one in reserve. The charging of the blast furnace is accomplished by means of an inclined elevator with one or more steel buggies which travel from the ore pile and coke bins up to the furnace mouth, where their contents are automatically dumped.

One of the most effective improvements in the art of iron making has been the heating of the blast before it enters the furnace. This is done in the Cowper hot-blast stove, a cylinderical wrought-iron tower, about 20 feet in diameter and 80 feet in height. It is lined with firebrick and contains, on the side next the furnace, a large vertical flue, into which the furnace gases pass by way of a valve at the bottom. The rest of the interior of the stove is occupied by a mass of firebrick pierced with innumerable vertical flues extending from top to bottom. The hot gases from the blast furnace are ignited on entering the base of the large flue by admitting air to them by means of a valve, and the hot products pass up the main flue and down through the mass of brickwork, finally escaping to a lofty steel chimney. As soon as the firebrick "checkerwork," as it is called, with which the stove is filled, has been heated to the proper temperature, the gases are shut off and turned into the second stove. The cold blast from the blowing engines is now turned in at the bottom of the first stove, passes up through the heated firebrick and down through the main flue, and finally is led to the circular blast mains which surround the furnace just above the tuyeres. To supply the hot blast for a single pair of the largest furnaces of the Edgar Thompson Works requires a large amount of horse power, the engine house for each two furnaces containing five pairs of huge Allis-Chalmers blowing engines of 4,000 maximum horse power, capable of delivering each about 50,000 cubic feet of air per minute at 25 pounds pressure.

MODERN MACHINE SHOP PRACTICE.

By F. S. K., Montreal.

WHILE the past few years have seen an almost entire revolution in industrial conditions, and the trend of modern practice in the direction of increased output and efficiency in all lines; nowhere has the development been more striking, or the improvement more marked, than in the machine shop. Although smaller shops all over the country still continue to some extent their old methods there is a great contrast between them and the larger installations of recent date. Yesterday the machine shop was cramped, very often dark, and without system, which was not at all conducive to best results. Today the place is commodious, well-lighted and systematic, exercising a cheering influence on the machinist, and therefore rendering him capable of doing more and better work for his employer. Then, things were done by rule of thumb. Now everything is reduced to exact mathematical calculations. Tons of material are now handled with less difficulty than was necessary for pounds before.

In accomplishing this, overhead cranes and indoor tracks are leading factors. It is safe to say that without travelling cranes the great shops in existence today would be impossible.

The most striking feature of all, however, is the method of running the machines. Formerly, all machines were run by the power developed by one or more large units, connected by long lengths of shafting throughout the entire shop. This meant the running of the engine or engines all the time, whether the machines were under load or not, and consequently a large amount of waste power. With the shaftings not properly alligned a large amount of power is lost. In an extreme case by means of an actual test, it was found that 80 per cent. of the total power given out by the engine was taken up by the shafting. The present method is to drive the machines by motors having a separate motor for each of the larger machines, and having several of the smaller ones connected to a short shaft, and run by the same means. Thus the motors are run only when the machine is doing work, and no power whatever consumed when it is idle. The electric drive affords small sub-devices of power, and we have a complete solution of using power only when something is to be done with it. One of the greatest advantages of this is the flexibility of installation which it affords. Large tools equipped with motors may be located in any part of the shop which is desirable, and which is most convenient for the work which they are to do, and are not limited to position as are the machines run from line shafting. The motor manufacturer claims (due to the motor installation) a greater economy in power consumption, a greater efficiency in the tools, and a much greater increase in efficiency in the employes themselves. No sooner had the electric motor found its way into the machine shop, than there appeared men who insisted that every machine should have a separate drive. Of course this is an extreme view. The plan which meets with the approval of the best machine shop engineers is to employ individual drives for tools which require motors of 5 h. p. and upwards, and smaller tools requiring less h. p., to be arranged in groups to give a fair load to motors of 5 h. p. or upwards.

Portable tools are another innovation in a machine shop and to them the above rule of power does not apply. Through the agency of compressed air portable tools were used to some extent before the advent of the electric drive; but it is now possible to employ portable tools to an extent never thought of before. With the manufacture of larger and larger machines the difficulty of getting the machine parts into proper place for working them increased in a greater ratio, and the time lost in making adjustment was great. Portable machine tools have come to the rescue and the machine is taken to the work instead of the work being taken to the machine. This has made practicable the making of large machines, such as generators, whose manufacture under other circumstances would be commercially impossible.

We have in Canada the largest locomotive works, recently installed, and the best car shops, now being fitted up, in the world, and in the machine shops of these, travelling cranes, electric drives, and portable tools are striking features.

High speed tool steel, the introduction of which is only just commencing, is another feature of the modern shop, and one which promises a still further improvement in manufacturing. The greatest effect of high speed steel will be towards a complete change in the design of machines and machine tools. Take an engine lathe for instance. The power must be increased, the saddle and side rests must be stiffened, and the feed gear driven. Where the usual practice of 1-32 inch and 1-16 inch feeds now prevails, there would be 1-8 and 3-16 inch feeds. Its introduction will make possible the manufacture of machines from 25 to 33 per cent. of their present cost. Before this has been fully accomplished new designs must be worked out and found to stand severe tests before they are put on the market.

Grinding tools have been wonderfully improved, and rapid strides have been made in the art of grinding during the past few years. Grinding machines made in innumerable types handle efficiently the roughest and the finest work. While the emery wheel and the grindstone have been used for years, the value of the grinding machine for finishing is of comparatively recent adoption.

The use of jigs, templets, false tables, etc., are all being given proper consideration. Machines costing many thousands of dollars are often left lying idle over half the time, while the work is being set up. In many instances this could be done on false tables and the output of the machine greatly increased, with a consequent reduction in the cost of machinery.

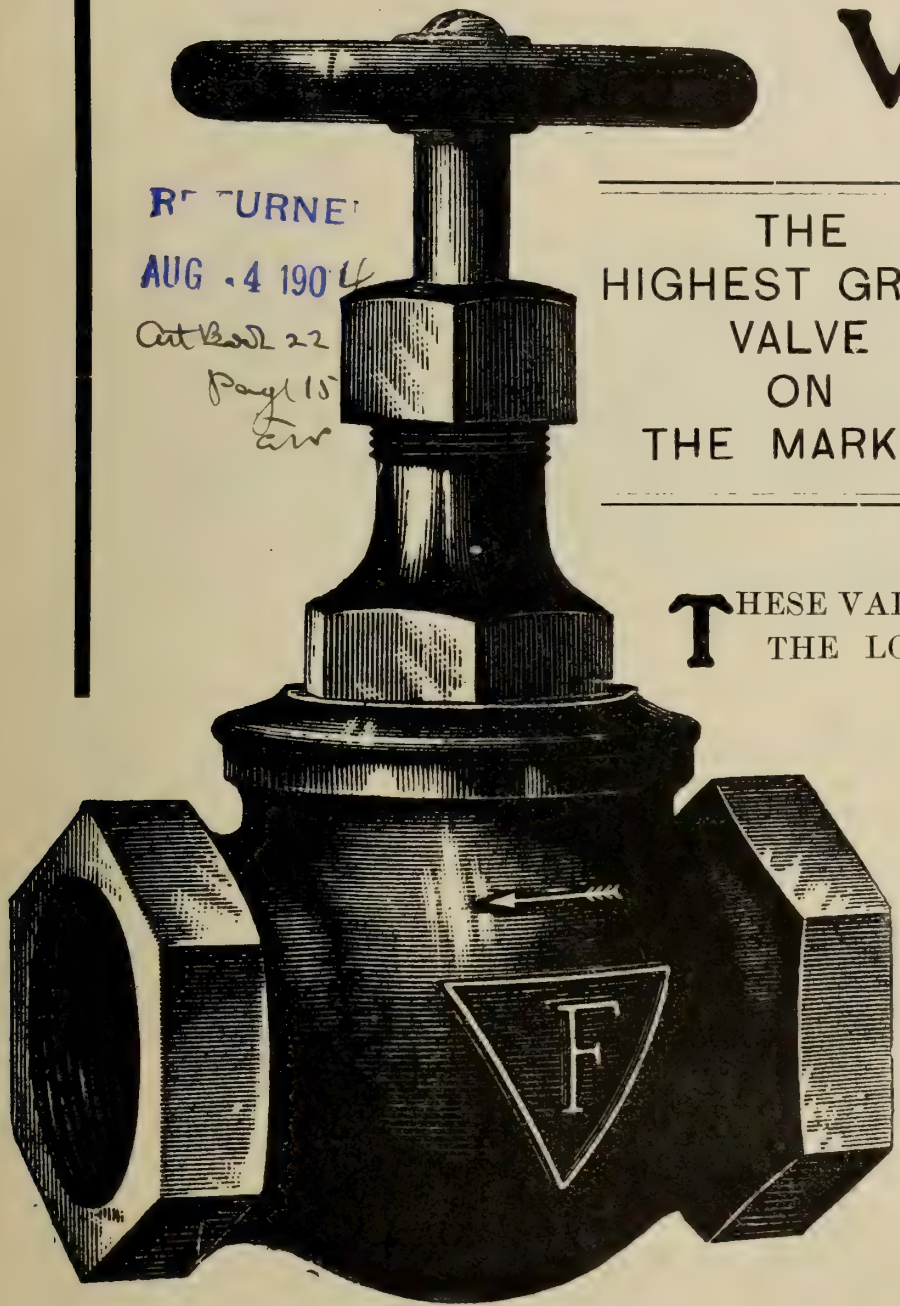
The proper routing of material is another matter that has been given serious attention, so that work may go through the shop with the least amount of handling and transferring, as this is one of the first essentials in economic production.

The present method is towards standardization and this is especially true of machine shop details, which heretofore have been taken care of according to the whims of numerous designers.

Professor Unwin has said, "In all producing industries there are operations requiring greater and operations requiring less intelligence; operations requiring greater manual skill and others requiring little manual skill. The subdivision of labor, which has arisen in modern industries, has for its object to economize the intelligence and skill and other special faculties of the workman. The factory should be so arranged that manufacture is carried on by the most advantageous number of processes, each worker doing what he is best fitted to do, and the number of workers in each class being proportioned to the requirement of the process allotted to it." When this is paid attention to the introduction of machinery is greatly facilitated. The further introduction of machinery requires further skill on the part of the operators. So we have at present a great amount of complicated labor saving machinery, the working of which calls for a high amount of intelligence; and the machinist of to-day is no mere drudge but a skillful and intelligent machine operator.

FAIRBANKS RENEWABLE ASBESTOS DISC VALVES

RETURNED AUG - 4 1904
Cut Book 22
Page 15



THE HIGHEST GRADE VALVE ON THE MARKET

Showing how easily a new disc is inserted.

THESE VALVES ARE WITHOUT QUESTION THE LONGEST WEARING, QUICKEST CHANGED DISC, STRONGEST BUILT AND MOST ECONOMIC VALVES ON THE MARKET.

THEIR MANY POINTS OF SUPERIORITY HAVE BEEN FULLY DEMONSTRATED BY THE SEVERE TEST OF ACTUAL SERVICE, AND FOR THIS REASON: THEY HAVE BEEN APPROVED AND ADOPTED BY THE BEST ENGINEERS IN AMERICA.

How is this for a Change?

To change the disc in a Fairbanks valve you simply remove the bonnet, slip the old disc from the end of spindle, substitute a new disc and replace the bonnet. You then have practically a new valve, and the change is made without the use of tools or loss of time. Can you do this with the valves you are now using?

SEND FOR OUR VALVE CATALOGUE

The Fairbanks Company

MONTREAL TORONTO WINNIPEG VANCOUVER

A 14-INCH HYDRAULIC BORING LATHE.

THE machine illustrated herewith, built at the Niles Tool Works, Hamilton, Ohio, by Niles-Bement-Pond Co., is intended to bore gun forgings, marine shafts, and ingots generally. It will take in a shaft 60 feet long, 30 inches in diameter, and bore a hole out of the solid 12 inches in diameter the full length, or 14 inches for short length.

Two boring-bars are used, one at each end, while the work is being held in a hollow spindle or revolving chuck. Two revolving ring steady rests on each side of the centre chuck support the work. The feed pressure required to do such extremely heavy work is so great that it becomes impractical to feed by rack and pinion or screw. For this reason the boring-bars are fed in by hydraulic pressure. The boring-bar itself is clamped in a head by means of hydraulic pressure, in addition to lever and toggle joint. The hydraulic pressure against the piston is 720 pounds per square inch, giving a total pressure of 200,000 pounds against the piston.

It is obvious that an arrangement like this would allow the tool to gouge into the work should the metal be soft, and, generally speaking, would not offer any means of control of the feed. In order to provide for this control, the rear end of the piston, that is, the end projecting backward from the cylinder, is cut as a very steep screw. A nut revolving on this screw has a worm-wheel with very steep pitch cut on its outer

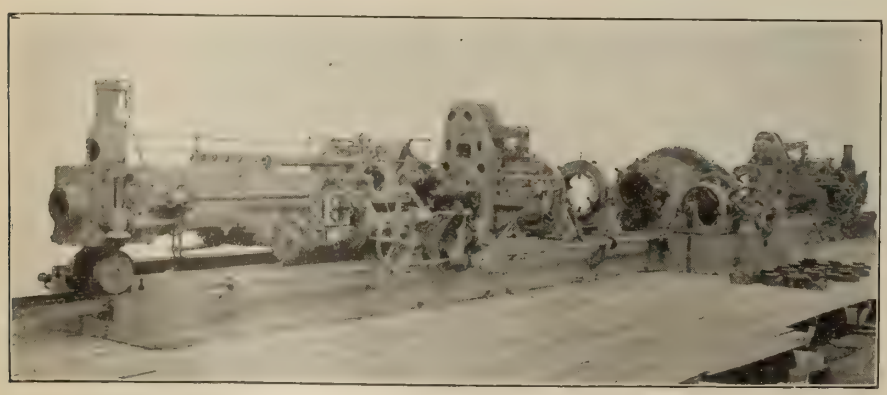


Fig. 1.—Complete Lathe with Near View of the Bar Feeding Mechanism.

circumference. The angles of the screw and the worm are so chosen that the pressure against the piston will be able to revolve the nut, and the movement of the nut will be able to revolve the worm, but a relatively small amount of resistance on the worm will entirely check this movement. This amount of resistance is provided by ordinary feed mechanism taken from friction discs, which have the necessary change-gears, etc., to enable the operator to get any feed desired. It will be seen, therefore, that the hydraulic cylinder furnishes the pressure and the feed mechanism furnishes the amount of feed, but that the feed mechanism is never subjected to the heavy strains due to the exceedingly heavy work to be done on this machine.

Fig 2.—Detail View of One End and the Chuck Driving Mechanism.

The illustration clearly shows the drive of this machine. It is driven by a 100 horse-power Westinghouse motor, 220 volts. A motor of this make and size always allows of some speed variation by means of field control. The range of speed is increased by change-gears which are also clearly visible in the illustration.

The main driving gear, which is bolted on to the hollow spindle or chuck, has 75 teeth, 4 inches pitch, 10 inches face. It is a steel casting, as is also the spindle.

The piece to be bored is chucked by means of set screws shown in the illustration. There are eight set screws, 3 1-2 inches in diameter, on each side of the machine.

The feed is taken from the last driving-shaft, and is transmitted to the two cylinders by means of the long shaft running alongside and in front of the bed. This shaft is supported by drop-bearings and is made in three pieces coupled together. Change-gears and friction discs give a wide range of feeds.

A hand feed is provided for by means of hand-wheel. Before using this hand-wheel, friction discs and feed driving-shaft are disconnected by means of hand-wheel. A 5 horse-power motor, gives a fast motion to a train of gearing, whereas, the feed mechanism gives a slow motion to this train. Clutch-lever throws in either one or the other, and thus gives either a slow feed or a quick traverse of 10 feet per minute to the piston, and, if the cylinder is clamped to the bed, also to the clamping-head, or, if the clamping-head is clamped to the bed, it gives this quick traverse to the cylinder. This quick traverse is really gotten by means of hydraulic pressure in the cylinder, and the small motor only regulates the speed. A hand-wheel gives adjustment to the piston and clamping-head, or to the cylinder should this latter be clamped to the bed.

The parts to be moved being very heavy, it is natural that a great amount of movement of the hand-wheel is required in order to produce a small amount of motion of either the clamping-head or cylinder, and, consequently, if the cylinder is travelling at a rate of 10 feet a minute, by power, this hand-wheel would race at a terrific speed, which would be dangerous to the operator. For this reason, the arrangement of the hand-wheel is made in such a way that this hand-wheel is loose on its shaft or stud if either the quick traverse or feed is thrown in, and is only connected to the mechanism which moves the cylinder when both feed and

TINSMITHS', CANNERS' and SHEET METAL WORKING TOOLS of all description, PRESSES, DIES, etc., etc.

quick traverse are out of action, thus avoiding all possibilities of danger.

The train of gearing moved by the motor can be connected to the cylinder mechanism, or it can be connected to the shaft, which, by means of suitable gearing, drives a grooved roll, which is not visible in the illustration but which is held in a floating frame inside of the rear part of the cylinder casting. This floating frame carries the hydraulic cylinder, the piston of which is connected to this grooved roll while the cylinder casting is connected to two other rollers under the bar. By admitting water in this cylinder the inner boring-bar is clamped between the rollers, and by moving the grooved roll a quick traverse motion is imparted to this inner bar.

The mode of operating this machine is to force 4 feet of the boring-bar into the work. By that time the clamping-head is up to the work and 4 feet distant from the cylinder. The quick traverse is then brought into play and the clamping-head is pulled back until it comes up to the cylinder. The inner boring-bar is then pushed 4 feet further forward and the boring-bar is once more forced into the work another 4 feet. This alternate action of forcing the bar into the work and drawing the clamping-head back so as to take a new grip is repeated until the centre of the work is reached.

Before setting up new work, whereby, of course, the position of the clamping-head and cylinder may have to be re-located, the following mode of operation is adopted:

Supposing the cylinder and clamping-head are near the centre of machine and are wanted at the extreme end of the machine; then first clamp the clamping-head to the bed and by means of the quick traverse push the cylinder back 4 feet; then clamp the cylinder to the bed, unclamp the clamping-head, and run it back 4 feet. Repeat this cycle of operations as many times as necessary. The inner boring-bar can, of course, be withdrawn in one operation.

The piping for the different cylinders is at the rear of the machine supported in brackets or rollers where the piping is sliding. There are handles for operating the various valves both on the front and rear sides of the machine.

Make Many Machinery Lines.

G. A. Crosby & Co., of Ontario, Limited, manufacturers of high-grade machine tools and sheet metal working machinery at Point Edward, Ontario, have since starting in business in Canada in May, 1901, built up a business and established a reputation for their product as well as for their progressiveness.

They employ about two hundred men, most of whom are high-priced mechanics who are experts in their different lines, and their shop is fully equipped with all the latest machinery and appliances for rapidly producing high-grade machinery. In addition to their Canadian trade this company have a large foreign trade.

Transmission Rope.

THERE has been much discussion among mill owners and other users of transmission rope as to the relative efficiency of three and four strand rope. Consequently the following circular letter which the Consumers' Cordage Co. have recently sent out should be of interest to the trade. The letters is as follows:

"As we have many enquiries from time to time regarding the relative efficiency of three and four strand rope, we have thought best to give our opinion on the matter, and our reasons for the position we take in always recommending three strand rope in preference to four strand.

"The trade have been imposed upon enough in this matter and we think they are entitled to the facts.

"Three strand rope is laid more closely, has no heart and the strands bear on each other evenly. On the contrary, there is a space left in the centre of four strand rope, which is usually filled up by a heart. The rule in making rope to get at the number of yarns put into the heart is that the heart should contain 1-13th of the total number of yarns in the strands composing the rope. Supposing a four strand rope contained 132 threads, the heart would be equivalent in bulk to 10 threads, while the strands would contain 33 threads apiece. It is readily seen how much inferior in strength the heart is to any single strand, and it is not surprising that when a strain comes upon the rope that the heart is the first to break. After the heart is parted a space is left inside of the rope, one of the strands cuts in, the rope is stranded and after a time goes to pieces. With a three strand rope this does not occur for the strands bear evenly. Furthermore, the strength of four strand rope is much inferior to that of three strand. We give you below tests of three and four strand rope, made by United States Government at the Watertown arsenal.

COMPARATIVE TESTS, PURE MANILA ROPE.

Cir Size.	3 strand.	4 strand.
2¼ inch	6206 lbs.	4633 lbs.
3 "	9800 "	8583 "
4½ "	20873 "	18100 "

"The above is the average of three tests.

"There is no room for question but what three strand rope is stronger than four strand rope, and is also much better adapted for transmission of power because it can be more thoroughly spliced."

USE OUR

"MAPLE LEAF BELT DRESSING"

If CORUNDUM be no better than emery, then emery is no better than iron ore.

If you grant that the United States Government is right when it states that emery is a mechanical admixture of **CORUNDUM** and magnetite or hematite iron ore, you must at once grant the above deduction is logical.

But to use iron ore for polishing or grinding iron and steel would be absurd. If so, why use **CORUNDUM** and iron ore (emery), instead of the pure abrasive **CRAIG MINE CRYSTAL CORUNDUM.**

The **Canada Corundum Company,** Limited

TORONTO, CANADA.

1896

1904

The Machinery Plant at McGill University.

WHEN the visitor enters the engineering building at McGill, he at once feels the academic atmosphere of the place. The wide halls terminating in classrooms, the professors' offices, the reading room and library, all tend to deepen the first impression, as he walks along the first two stories of the main building. Should he be fortunate enough to arrive at the right time, and wander in the direction of the workman building, the buzz and hum of belts and shafting strikes his ears. On entering the different departments one after the other, he is confronted on all sides by young men in blue overalls and smocks, who are busy either doing practical work of some sort, or running the different kinds of machinery. The first impression has now disappeared, and he feels that he is in some large industrial institution, whose products go out to further the commerce of the country. What surprises him most is the large amount of machinery of all descriptions, the right handling of which is a part of the training of the young engineer.

Pattern Shop

The pattern shop is likely the first place reached, and here he finds students busy at thirty-eight carpenters' and pattern-makers' benches, and running twenty-two wood lathes. Besides these he sees in the room a large pattern-maker's lathe for face-plate work, a circular saw and jig-saw; a band saw; two wood trimmers; a surface planer, a mortising machine; a saw sharpener, and one universal wood working machine. Here the students of the earlier years are learning the sharpening and care of wood work and tools; sawing, planing, and pairing to size; preparation of flat surface parallel strips and rectangular blocks; construction of the principal joints employed in carpentery and joiner work, such as end and middle lap joints; end and middle mortise and tenon joints; mitres and dado and sash joints, as well as dovetailing and scarfing, and the making of joints used in roof and girder work. He is learning wood-turning, and the use of wood-turning tools; the elements of pattern making, allowances to be made for draught, and for contraction in moulding and casting. The preparation of prints and plane core boxes; the construction of pattern and core boxes for pipes, flanges, elbows, tees and valves. These lead up to more difficult exercises in pattern-making, including built up patterns, and face plate work, and gear and wheel patterns.

On going down stairs he finds a large machine shop well equipped with all necessary machinery, which is driven electrically, as are the machines above, all motors taking power from the station in the building. Here there are twelve 18 in. engine lathes; one 18 in. turret lathe, fitted for stud and screw making; one 27 in. engine lathe; one 27 in. surface lathe; one brass finishing lathe; one 36 in. vertical drilling machine with compound table; one universal milling machine with vertical milling attachment, and dividing headstock; one planer capable of taking work up to 24 in. by 24 in. by 5 feet; one 9 in. slatting machine; one 16 in. shaper; one universal grinding machine and centering machine and cutter grinder and tool grinder, and a buffing and emery grinding machine. There are vise benches for eighteen students, with the necessary hand tools, and a marking-off table. The students are busy at many portions, such as chipping, screwing and tapping; use of scribing block and surface gauge, marking off work for lathes and other machines, turning and boring cylinder work to gauge; screw cutting, and preparation of screw cutting tools; use of turret lathe; making flat and curved surfaces on the planing and shaping machines; plane and circular milling, with vertical and horizontal spindles; gear cutting, cutter grinding, drilling and grinding tools.

Continuing his journey, the visitor goes through a side door leading downward to a hall at the end of which are foundry and smith shop side by side. In the foundry are benches, tools, and apparatus for bench and floor moulding and core making, with accommodation for twenty students. A gas fire brass melting furnace, a cupola for melting iron, and the necessary core ovens and core benches give facilities for undertaking iron foundry work, in green and dry sand, and for brass moulding. The shop is served by a hand travelling crane of one ton capacity. Here the students are instructed in the use of moulding tools, preparation of moulding sand, and core making; bench and floor moulding, as well as melting and pouring metal.

The smith-shop opens before him a blaze of glory with its sixteen sturdevant forges in full blast. These are power driven and connected with an exhaust fan, there is a power-hammer, and the necessary equipment of anvils, swage blocks, sets, flatteners and other tools. Provision is made for instruction in soldering and brazing, and for an elementary course in ornamental wrought iron in connection with the architecture course.

Returning to the Macdonald building by another route, the visitor passes through the power station in which are four units. Two 75 kilo-watt direct current generators, each direct connected to a hundred horse power engine and two 30 kilo-watt generators likewise direct connected. In conjunction with this, there is a 300 kilo-watt battery plant, which is charged during times of light load and from it, from time to time, the lights and machinery are run, allowing the engines to be shut down. Adjoining is the boiler room, which contains five distinct type of boilers as follows: One Cornish boiler for heating service rated at 50 h. p.; one locomotive boiler, 100 h. p.; one internally fired tubular boiler 120 h. p.; two

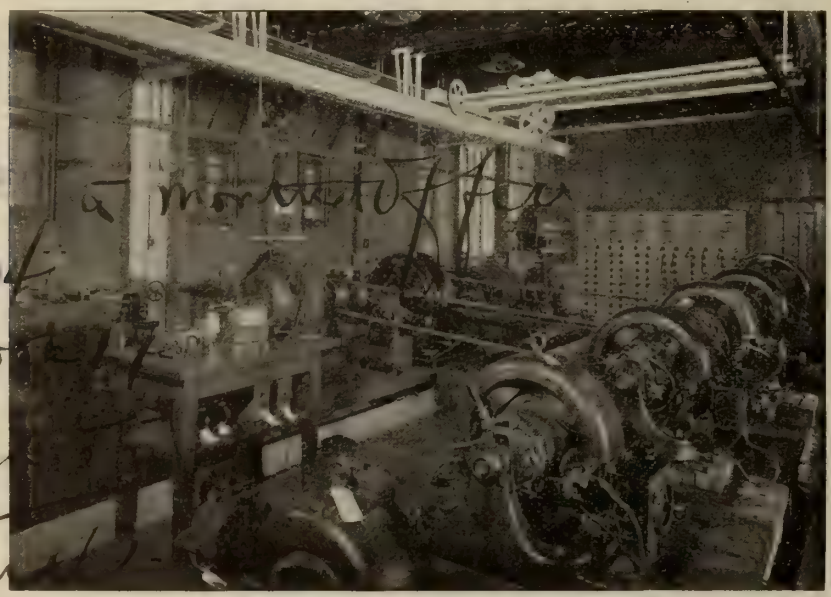
Babcock-Wilcox water tube boilers, each 60 h. p.; one Yarrow water tube boiler fitted in a closed stokehold for working under forced draught rated at 150 h. p. These boilers are provided with the necessary tanks, weighing machines and apparatus for carrying out evaporative tests.

On mounting a narrow stairs the door of the machine shop again comes to view, across from which is the thermodynamic labratory. Here are seen numerous steam and gas machines, the most noticeable of which is an 120 horse power, specially designed for investigating the behavior of steam under various conditions; the cylinders are 6½ in., 9 in., 13 in. and 18 in. in diameter, and the stroke of the pistons is 15 in. The cylinders can be so connected as to allow of working as a simple, compound, triple, or quadruple expansion engine, either condensing or non-condensing, and with any desired rate of expansion. The jackets are so fitted as to permit of measuring independently the water condensed in the cover, barrel, or bottom jacket of each cylinder, and the engine can be worked with any desired initial pressure up to 200 lbs. per square inch. The measurements of heat are made by means of large tanks, which receive the cooling water and the condensed steam. There is an independent surface condenser and air pump. Two hydraulic absorption brakes and an alternative friction brake serve to measure the mechanical power developed.



Alternating Current Dynamo Laboratory.

The laboratory also contains the following machinery: A Robb automatic cut-off engine, having a cylinder 10½ in. in diameter by 12 in. stroke. This engine is specially fitted up for the measurement of cylinder temperatures, and can be run at speeds up to 300 revolutions per minute. An automatic high speed engine by Macintosh & Seymour, having a cylinder 12 in. diameter by 12½ in. stroke. Automatic recording apparatus, registering the load on the brake of this engine, has been constructed and fitted up during the past session.

A hot-air engine built by Woodbury Merrill of Ticonderoga. An Atkinson "Cycle" gas engine, having a cylinder 7 in. diameter by 8 in. stroke, and indicating 6 h. p. An Otto gas engine (built in the workshops of the Department), having a cylinder 8½ in. diameter by 12 in. stroke, and indicating 12 h. p. A "Dake" steam engine of 4 h. p. A two stage air compressor taking 40 h. p., and having cylinders 10 inches and 17 inches in diameter, by 15 inches stroke. The compressor delivers its air into reservoirs placed beneath the floor of the machine shop, and is provided with an intercooler whose capacity can be varied as desired. A high speed horizontal engine having a cylinder 6 in. diameter by 9 in. stroke, and operated by compressed air. A gas-fired preheater for the above engine. A standard 9½ inch Westinghouse air brake pump, fitted for testing and for supplying compressed air for experimental and other purposes. A non-rotative Blake steam pump, having steam and water cylinders 4½ and 2¾ in. diameter and 4½ in. stroke.

The smaller apparatus belonging to the laboratory includes the necessary equipment of weighing machines, brakes, calorimeters, thermometers, etc.

The dynamo laboratory is the next point of interest. This laboratory consists of two sections, one devoted to direct current work, and the other to alternating current work. The former method of driving all dynamos from an overhead line shaft and clutch pulleys has been abandoned and individual motors supplied for each machine. Each motor is provided with suitable series turns and variable shunt, the whole being connected to act with or against the shunt turns, as a compounding or differential effect is desired. The speed of the motors can be varied about 50 per cent. by field rheostat. This gives perfect control of dynamo speed. Current for operating is obtained from six independent sources of supply; one 75 K. W. direct connected unit in the service plant; 3 sets of 25 K. W. hour chloride accumulators and two city supply circuits. All dynamos and motors are mounted on strong testing benches fifteen inches high, with slotted floor, so that any machine can be placed anywhere on the benches and secured in place. Two small travelling cranes over the benches allow machines to be easily shifted. All wiring is done in conduits under the floor, and large sectional switchboards are provided for current distribution about the laboratories. Special testing tables, permanently wired up and fitted with circuit breakers, switches, etc., facilitate the work. Twenty-five commutating machines, generators, motors, boosters, motor-generators, dynamotors, converters, closed and open coil arc machines, varying in capacity from a fraction of a kilowatt to 75 kilowatts, of many different types and makes, are provided for direct current testing. Twelve alternating current machines, including generators, synchronous motors, compensators, and synchronous converters, together with a large amount of stationery and rotary induction apparatus, are provided for alternating current work. Several of the alternating current dynamos are of the inductor type and several different shaped inductors are provided with each machine to give different wave forms. A specially arranged induction motor serves as a frequency changer. The laboratory is also provided with voltmeters, ammeters, and wattmeters of standard make, and of different ranges; condensers, rheostats, standard resistances, etc.

From this to the hydraulic laboratory is but a few steps across the hall, and the visitor is once more amazed at the amount of apparatus. Here the student studies practically the flow of water through orifices of various forms and sizes, through submerged openings, over weirs, through pipes, mouth-pieces, etc.

The equipment of this laboratory includes: A large experimental tank, 30 ft. in height and 25 sq. ft. in sectional area. With this tank experiments are conducted on the flow of water through orifices either free or submerged. By a simple arrangement the orifices can be

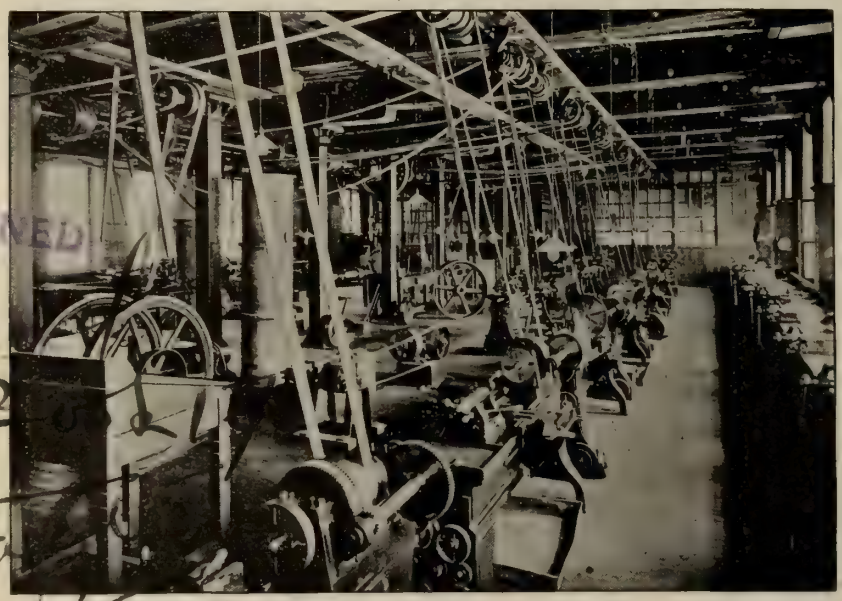
rapidly interchanged without lowering the head, and with the loss of only about one pint of water. The indicating and measuring arrangements connected with the tank are exceedingly delicate and accurate, all times being automatically recorded by an electric chronograph, and valuable results have already been obtained. By means of a special connection with the city water supply, the available head of water may be increased up to 280 ft. An impact machine, which renders it possible to measure the force with which water flowing through an orifice, nozzle, or pipe, strikes any given surface, and also the impulsive effect of the water entering the buckets of hydraulic motors. A Rife's hydraulic ram. A jet measurer specially designed for investigating the dimensions of the jet produced in the phenomena known as "the inversion of the vein." With this apparatus it is possible to determine, within .001 inch, the dimensions of a jet in any plane and at any point of the path. Numerous orifices, nozzles, and mouth-pieces. A specially designed stand-pipe, with all the necessary connections for pipes of various sizes for investigations on frictional resistance. The pressures are measured by recording gauges, etc. A flume about 35 feet in length, by 5 ft. in width by 3 ft. 6 ins. in depth. Weirs up to 5 ft. in width, and with a depth of water over the sill varying from nil to 8 inches. A weir-depthing machine, with three adjustable heads, gives the surface depth of the stream at any three points in a transverse section. The velocity of the stream is also determined by means of a double Pitot tube. Numerous hydraulic pressure-gauges. A mercury column 60 feet in height. Gauge-testing apparatus. Various rotary, and piston meters, and a Venturi meter. Apparatus for illustrating vortex motion. Apparatus for illustrating vortex ring motion, and for determining the critical velocity of water flowing through pipes. Five specially built gauging tanks with suitable indicators, each having a capacity of 800 cubic feet, for determining the critical velocity of water flowing through pipes. Also other portable tanks. Transmission and absorption dynamometers. An experimental centrifugal pump, which can be tested with varying heights of suction and discharge. An inward-flow turbine, a new American turbine, an outward-flow impulse turbine, a Pelton, and other motors and turbines.

A door leads from this to the testing laboratory where are found powerful machines that pull bars of iron apart like so much wax, and crush blocks of concrete as though they were sand. The principal experiments carried out in this relates to the elasticity and strength of materials, friction, the theory of structures, the accuracy of springs, gauges, dynamometers, etc. Here are found a Wicksteed 100-ton and an Emery 50-ton machine for testing the tensile, compressive and transverse strength of the several materials of construction. To the former has been added a specially designed arrangement, by which the transverse strength of girders and beams up to 26 ft. in length can be determined. These machines are provided with the holders required for the various kinds of tests, and new holders have also been specially designed and made in the laboratory for investigating the tensile and shearing strength of timber for wire rope and belt tests, etc. Numerous attachments have also been made to the machines, which have already increased their efficiency. The most recent addition is a double-bearing support for transverse testing. An impact machine, with a drop of 30 ft., and with gearing which will enable specimens to be rotated at any required speed, and the blows to be repeated at any required intervals. By means of a revolving drum, a continuous and accurate record of the deflections of the specimens under the blows can be obtained. An Unwin Torsion machine with a specially designed angle-measurer, by which the amount of the torsion can be measured with extreme accuracy. An accumulator, furnishing a pressure of 3,600 lbs. per square inch, which is transmitted to the several testing machines, and ensures a perfectly steady application of stress, an impossibility when any form of pump is substituted for an accumulator. A Blake and a Worthington steam pump, designed to work against a pressure of 3,600 lbs. per square inch. The accumulator may be actuated by either of the pumps, and, if at any time it is desirable to do so, either of the pumps may be employed to actuate the testing machine direct. When in operation the work of the pump and the accumulator is automatic.



Machine Shop

The visitor is bewildered by this time and not able to take in half of what is pointed out around him. He has seen enough for one day without going to the mining building with its well equipped metallurgical, assaying, mining, and ore-dressing laboratories, or to see the liquid air plant in the physics building.

He learns still further, though, before he leaves, that within the past two years there have been built in the mechanical department of the engineering building, a 72 inch surfacing and boring lathe with compound rest; a new rocking grate for locomotive boiler; apparatus for experimenting on efficiency of worm gearing; set of cast steel gauges for machine shop; model to illustrate engine balancing; three surface condensers; 1,000 lb. coal car for boiler room; two hydraulic dynamometers; two draught gauges of special design, and one preheater for 6x9 compressed air engine. There is now building, by the engineering students of the fourth year an automobile. The machine, when completed, will be upholstered in scarlet and white, the colors of the university. The castings for the engine have been purchased from one of the best firms of motor-car manufacturers.

The motor, which will be set up first on the floor of the thermodynamic laboratory, is of 12 horse power and has two cylinders of four and a half inches diameter and with a stroke of five inches. The average speed of the revolutions per minute is 750, with a maximum of 1,200. Gasoline will be the fuel used, and the jump spark ignitor will be employed. A 1,800 pound car will be the capacity of the motor, and the speed is expected to reach thirty miles an hour.

THE MACHINERY MARKET.

Ontario.

Office of HARDWARE AND METAL,
10 Front Street E.
Toronto, March 18, 1904.

THE feeling on the market is optimistic this week. Things continue to look brighter as was reported last week. Travellers are now out on the road again, and enquiries are coming in greater number.

Saw mill machinery and engines and boilers continue to hold the chief attention. Enquiries have been numerous, and several orders have been placed.

There is no change in iron working machinery since last week. The demand keeps steady. Conditions in the electrical machinery market are very light, as reported last issue. Manufacturers are unusually busy for this time of the year, other years the rush of business not coming until very much later in the year. Gas and gasoline engines are holding their own.

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 17, 1904.

IN almost all lines of general machinery conditions are now much brighter than they were a month or two ago. During the first few weeks of the year inquiries were numerous but machinery men were unable to close much actual business. The main reason was a feeling of uncertainty as to the future of the market caused by the slump in the United States. Then came the snow blockade which hindered business of all kinds and buyers who were now recovering confidence in the strength of the Canadian machinery market were forced to delay their orders.

During the last three or four weeks, however, there has been a very marked improvement and the weekly round of the machinery houses has found a growing feeling of optimism.

The chief interest this week seems to be centered in saw mill outfits and supplies. Several houses report three and four sales each in the Province of Quebec and the Eastern and Northern parts of Ontario.

Engines and boilers of moderate horse power are still in splendid request. The inquiries noted for weeks past are now bringing tangible results and actual business during the week has been considerable. The prospects point to a brisk trade for several months.

In wood working machinery there is considerable activity but in iron working machinery and machine tools there is now very little doing. There are at present no very large buyers on the market.

Some interest is manifested in the increased activity in gold mining in Nova Scotia. Mining machinery men are expecting to get some increased business in that province.

General satisfaction is expressed at the satisfactory settlement of the affairs of the Locomotive and Machine Company. The James Cooper Mfg. Co. having also been taken over by American capital, the two large concerns whose affairs were in an unsatisfactory condition are now on a stable basis.

New York.

From The Iron Age, March 9, 1904.

FURTHER purchases of fair sized lots of machine tools by some of the railroad companies have served to make more apparent the improvement in the machinery trade, which has become noticeable during the last few weeks. These orders, coupled with the smaller bookings, make up a fair week's business. Conditions generally are brightening, and throughout Liberty street a more confident feeling prevails toward the near future. The next week, it is said, will bring forth some good contracts, among which is mentioned an important lot of machine tools aggregating more than $50,000 in value.

Probably the most important event of the week concerning power plant equipment matters was the report of further extension of their manufacturing facilities by the Allis-Chalmers Company, Chicago. We are informed from a reliable source that they have secured control of the Bullock Electric Mfg. Company, Cincinnati, Ohio, and that arrangements have been made to utilize the plant at Norwood, near Cincinnati, Ohio, for the production of the new line of electrical apparatus which the Allis Company recently acquired in connection with that now manufactured by the Bullock Company. Since entering the electric field it has become evident that the Allis-Chalmers Company needed an especially equipped plant for this class of work, and in taking over the Bullock works they not only secured modern equipment already installed and a complete force of trained men, but are placed in a position whereby they can make as prompt deliveries as their competitors. While the particulars as to arrangements for the operation of the Bullock plant are not at hand, we understand that a new company are to be organized who will be under the same management as heretofore, but who will be subsidiary to the Allis-Chalmers Company. In this connection it will be interesting to note the recent organization of the Canadian Engineering Company. Despatches from Montreal state that this company have purchased for about $200,000 the plant and property of the defunct Jas. Cooper Mfg. Company at Rockfield, near Montreal, Canada.

The acquisition of the Locomotive and Machine Co., of Montreal, is recognized as an advantage to the American Locomotive Company, in that it is now enabled to save 35 per cent., or $6,000 to $7,000, on engines for Canadian use, on which there is now a duty to that amount. The shops of the acquired company were only completed last Fall, and include a large wharf and pier. The capacity is about 300 locomotives a year. It will be recalled that a large amount of the machinery installed in the new shops was purchased in this country last year.

The Peck Rolling Mills Co.

THE Peck Rolling Mills Co., whose advertisement appears in another part of this paper, are one of the oldest establishments in Canada. For years the business was carried on under the name of Peck, Benny & Co., but a year or two ago a joint stock company was formed under the above name. Mr. T. Esmond Peck, the manager of the company, is a young man who has displayed great energy and ability in the management of the business and he has won the good opinion of the hardware jobbing and retail trade of Canada. This company's iron and horseshoes, nails, etc., are sold all over Canada and under its capable management the company's sales are being largely increased. Old hardware men are well acquainted with this firm and new firms just starting will find the Peck Rolling Mills a good firm with which to do business. Their goods are handled by the jobbing trade and are also sold direct.

ELECTRICAL SUPPLIES

A LINE WORTHY OF ATTENTION.

ELECTRICITY has become so much a part of the industrial life of the twentieth century that the hardware dealer does well to keep his mind and eye open for the new inventions, the novelties likely to attract business to his store, and to add to his reputation for progressiveness.

The electrical motor is in general use in small machine shops and in many foundries where electrical power is available, so that many hardware men are well posted as to the care and attention this machine needs.

Electric bells have become so general that in almost every town is to be found a tinsmith or a plumber who has made sufficient study of electricity and electric appliances to be able to instal them.

Apart from such lines as these, however, there is a large field which the hardware trade might devote more attention to than they do at the moment, namely, electrical novelties and supplies of various kinds. There is a good margin of profit in these lines and the demand for them is bound to increase with the years.

—

Extending Their Business Scope.

THE Smith & Hemenway Co., 296 Broadway, New York, made a number of changes in their various properties with which they are identified. Recently they have removed the Schatz Hardware Mfg. Co., of Mt. Carmel, Conn., of which L. P. Smith is president, and J. F. Hemenway treasurer, to Chappaqua, New York, absorbing the large plant of the Acme Ball Bearing Caster Co. One of their latest patterns of casters is built without socket or quill. The bit is inserted into the leg of a piece of furniture by a broad screw, which makes it perfectly firm.

The Schatz Hardware Mfg. Co. are makers of one of the largest line of electrical tools and hardware specialties in the United States, and their latest productions include a No. 707 double head connector, intended for straight telephone, telegraph and electric light wires on one side, and on the reverse side, to be used with the McIntyre splicer. They are also producing a line of baby clamps or connectors. Their facilities will be more than quadrupled in their new plant, as it is equipped with all the modern tools and machinery obtainable.

In addition to the regular line of tools they manufacture, they will make a specialty of sheet metal stampings, or drawn work, polished nickel plated specialties, experimental work, and perfecting of inventions will be also a large branch of their business.

Another addition to the Smith & Hemenway Co. is the Champion Mfg. Co., Rocky Hill, Conn. This company is making a new style of hammer with bell face, and will state that they will make a full line of hatchets, ice tools, can openers and hardware specialties. They have recently acquired the Best Tool Co.'s plant of Boston, who manufacture automatic power breast drill, the auto hand spring winder, and the micrometer surface gauge.

Another acquisition is the Page-Storms Drop Forge Co., Brightwood, Mass., one of the largest makers of engineers' and drop forged wrenches, especially drop forgings of all descriptions from steel, iron, bronze and copper, in the United States.

Anyone interested in any of these factories can apply direct to the Smit Hemenway Co., room 215 Coristine Building, Montreal, Canada, which is their Canadian show-room in charge of Allen C. Jenking. Any courtesies extended to Mr. Jenking will be appreciated by the firm, as well as himself.

—

John Millen & Sons.

JOHN MILLEN & SONS, Montreal, have every confidence in the future of the bicycle trade of Canada. Last year a marked revival was noticed and business for the first three months of 1904 has been more than double that of the corresponding period in 1903. It is evident that since the bicycle has ceased to be a fad its future is assured because it is too useful to be dispensed with. The hardware merchant who is looking for bicycle supplies should write to John Millen & Sons for their new catalogue, which is just being issued. Hardware and Metal is informed that it is to be of a most complete character.

In a recent issue of Hardware and Metal reference was made to the exclusive agency which this firm have secured for Shelby steel tubing. It was pointed out that they are carrying in their Montreal and Toronto warehouses a large stock of about 150 sizes which is quite sufficient to meet the ordinary demands of the trade. Any special orders for sizes not in stock can be filled with little delay by importing from the United States.

As was explained before, the Shelby tubes are made from the very best open-hearth steel, the material being soft and easily worked. It welds as easily as the best iron, but is much more ductile and has a higher tensile strength. The metal is cold drawn and hence is rendered dense, tough and ductile. The cold drawn process gives it an increased tensile strength and produces a tube true in size and gauge. As the tubes are worked cold the danger of surface defects is eliminated. These often occur through the presence of rolling mill scales or other dirt in the fibre of the metal.

The physical properties of the tubes are about as follows :

Tensile strength	50,000 lbs.
Electrical limit	35,000 lbs.
Elongation	35 per cent

New uses for this tubing are being discovered every day. Its use has resulted in a great economy of labor for it can be used for many purposes for which it has been the custom in most shops to undertake the tedious task of boring through the solid steel. It can be used for hollow axles, roller bearings, laundry machine rollers, diamond drill rods, typewriters, hollow shafting, pneumatic tubes, etc. It can be used in all classes of artistic iron work.

John Millen & Sons have received some orders recently for their Shelby steel tubing although they have held the agency only a short time. The railroads have been large buyers as also have been several laundry machine companies.

In one of their advertisements on another page John Millen & Sons are di-

recting attention to their new key cabinets. The hardware trade have long associated John Millen & Sons with the key business. These cabinets contain a very large assortment of keys and they have won a well deserved popularity among the trade.

A Time Recorder for Factories.

THE illustrations show a workman's time recorder to which the attention of Hardware and Metal has been called by Munderloh & Co., Montreal, who are the Canadian agents.

The Time Recorder

It is a device which is now being brought to the attention of the public and, thinking it might be of interest to our readers, illustrations of the device are herewith presented. The points claimed for it are simplicity, accuracy, rapidity of reckoning, and legibility. It is essentially a time recorder which a busy factory superintendent requires on account of the ease with which lateness or absence of operators can be detected.

The absolute necessity of an efficient automatic system for recording the "time" of employes is now as fully established as that of the telephone or electric light. This is proven by the fact that nearly every modern factory is now equipped with a time recording device of some kind.

Competition is constantly increasing in all commercial lines, and hence the strictest economy is demanded in every department of a manufacturing plant. It is, therefore, absolutely necessary that exact and systematic methods be employed in recording and computing employes' time, in estimating the producing ability of each employe, and in determining an equitable basis of wages.

The illustration shows the cylinder around which the time sheet is fastened. When the employe presses his button it automatically rings a clear toned bell and records the exact time on the time sheet. The pressure on the button operates a lever, having a steel pin at the opposite end, which makes an indelible perforation in the time sheet within the recorder. The time sheet is fastened about the vertical cylinder, shown in the illustration, and this cylinder revolves slowly by power transmitted from, and in exact unison with, the clock.

The time sheet is legible and may be checked with great rapidity. The sheet is ruled horizontally into 30, 50 or 100 spaces, according to the number of employes for which the machine is designed, and it is then ruled perpendicularly into hour, half-hour, quarter, and five-minute spaces, each plainly distinguished by its particular color. A glance at the time sheet is sufficient to tell the exact time of a man's record, either coming to work or going.

The cylinder around which the time sheet is fastened is of hard rubber, with nickel-plated mountings, and is very light. Horizontal grooves are turned in its circumference which allow the pin points to pass through the sheet, making clean, round perforations. The cylinder rests on a pointed steel bearing and is revolved by a worm and gear devise at the top connected with the clock movement. The power required to turn it is so slight as not to be perceptible in the action of the clock movement. Two pin points embedded in the cylinder prevent the time sheet from slipping and a shodlder at top and bottam also serve to keep the sheet in place.

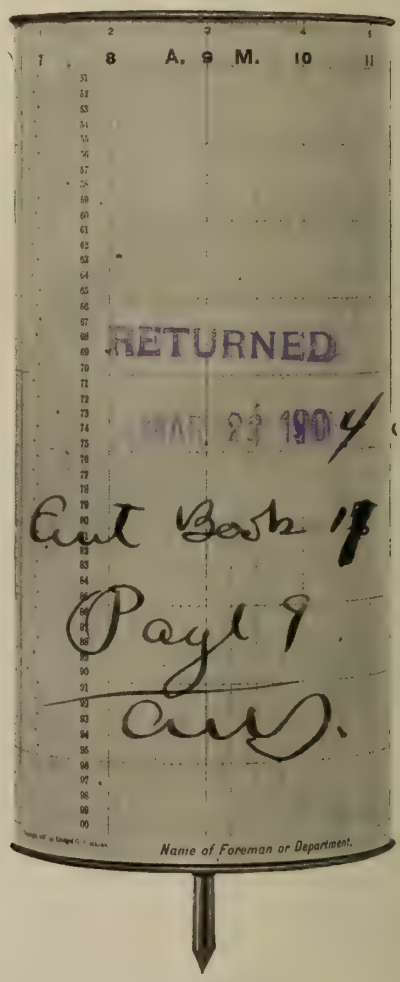
As indicated above, the Simplex recorder is made in three sizes for 30, 50 and 100 people, thus suiting the requirements of nearly all establishments.

Electrical Novelties.

Attention is directed to the advertisement in another column of the Sayer Electric Company of Montreal. Hardware men in increasing numbers are handling electrical goods, and to all such this advertisement will be of interest. There is a profitable trade to be developed in electrical supplies and fixtures of an ornamental nature, as well as in electrical novelties. The Sayer Electric Company are in the front rank of electrical supply houses, and the hardware man who has not a copy of their catalogue should write for one.

Machinery Notes.

The Canadian Engineering Co., Limited, Montreal, have been incorporated with a capital of $10,000.



The Cylinder.

General Manager Miller of the American Locomotive Co., who have secured the works of the Locomotive and Machine Company, of Montreal, announces that all the workmen employed in the acquired works will be Canadian, and that all the supplies for the works will be purchased in Canada. B. T. Shea, general superintendent of the works at Montreal, has resigned his position, and has been succeeded by G. Curry, superintendent of the Rhode Island plant of the American Locomotive Company.

THE SHERWIN-WILLIAMS TRADE WINNING PAINT AND VARNISH SPECIALTIES

STRONG ADVERTISING TO WIN TRADE
GOOD QUALITY TO HOLD IT

ON this page we illustrate a few trade-winning paint specialties—lines that are bringing paint business and paint profit to dealers selling them.

We make good paints and good varnishes for all purposes. We make each as good as it can be made. We do not "boost" one product to the detriment of the others. Each one is good: we take more pains in making our products good than in anything else we do.

The Sherwin-Williams Full Line of Trade Winning Paint and Varnish Specialties enables the paint dealer—no matter where located—to control the paint business of his locality. There is no paint need that it does not cover.

We would like you to know the full meaning of ***The Sherwin-Williams Full Line.*** We would like to show you the profit it means to the dealer. We cannot do it in this small space. A postal card will bring full information by next mail.

PAINT, OIL AND BRUSH TRADES

THE STATUS OF PREPARED PAINTS.

SOMETIMES the hardware dealer has to face the question whether prepared paints are really better than strictly pure lead and oil. Some painters without making a fair study of the question will argue they can make ready themselves a better quality than the prepared article.

To meet such a difficulty Walter H. Cottingham, vice-president and general manager, writes in the following confident strain to agents of that company in the "S.W.P.," the organ of the Sherwin-Williams Company: "I wonder how many of our agents really believe good prepared paint is better than strictly pure lead and oil.

"I am inclined to think that many of you have not yet been fully convinced. The idea of 'patent' paint still sticks in your mind. You have so often been deceived by fake mixtures that you are distrustful—and I don't blame you, for the fake mixture man claims everything—and more—for his article than the maker of a good product claims for his.

"If it were not for these lying fake mixtures, good prepared paint would be used almost exclusively. It is undoubtedly superior to a paint made of lead and oil only.

"Lead and oil paint is trading on its past reputation. It is not used any more by consumers who have a thorough knowledge of painting. The modern engineer or chemist no longer specifies a paint pigment made wholly of lead. If he did he would betray his ignorance, for it has been proved beyond a question of doubt by thousands of tests made by honest, intelligent minds seeking facts, that lead in itself is not a satisfactory protective coating. It never was satisfactory. Before good prepared paint like S. W. P. was made it was best. It is through its long use that many still think it best. Education is a slow process, and habit is powerful. But in the long run the best article will crowd out the poorer. And this is just what is going on all the time. Lead and oil paint is dying a natural death simply because something better has come to take its place.

"Every man in our organization believes in S. W. P. He believes there is no paint like it. He is proud of it, proud of its success, and determined to make it greater. This is the secret of our growth. And this is the secret of business success—implicit confidence in your goods and enthusiasm in pushing the sale of them. Believe in your stuff or don't sell it. When you do believe in it you can't help but sell it. Merit begets confidence, confidence begets enthusiasm, and ethusiasm conquers the world."

Spring Trade in Brushes.

THIS Spring will no doubt show a largely increased output in all Canadian brush factories, as the demand for brushes is exceptionally brisk. At least the United Factories, Limited, manufacturers of "Boeckh" and "Bryan" brushes, report that it is only through their largely increased capacity they are able to fill orders as promptly as required. They anticipate that this condition will continue for a longer period than usual, owing to the Winter conditions delaying orders from many sections, and when the Winter does break the demand will be greater than in past seasons.

In view of the extra demand and an anticipated scarcity of certain grades of bristles in consequence of the Russo-Japanese war, it is just possible that there may be an advance, though manufacturers hesitate to prophesy that there will be. The hardware trade has ever given the paint brush department proper attention, which is deserving as this is certainly one of the important departments, especially in the Spring season.

A Complete Paint Establishment.

P. D. DODS & CO., Montreal, have been making some extensive improvements in their paint and varnish factory on St. Patrick street in that city. The energetic Mr. Tougas, who is at the head of this long established paint business, is ambitious to have everything about his factory up-to-date. The firm have long been known as prompt shippers, but with the extensive improvements which have been made they should be able to supply their customers even more promptly than has been their custom. The improvements made in the dry color department make it possible to do in two days work which formerly required a whole week.

The whole factory is arranged on a systematic plan so as to admit of the greatest economy of labor. An inspection of the works under the guidance of Mr. Tougas is a revelation to the uninitiated.

The varnish factory is the special pride of the manager. A whole department is devoted to the storage of the gums and the factory is well equipped with the necessary piping to convey the varnish to the different vats which are most systematically arranged. This department throughout is equipped in the most up-to-date fashion and the management pride themselves on their ability to ship promptly.

To Hardware and Metal readers it is unnecessary to introduce P. D. Dods & Co., for they are a well known firm and our readers are acquainted with their advertising. "Island City" paints and varnishes have made a reputation which it is the object of the company to sustain.

China Painting Extraordinary

In Montreal it is quite the proper thing to have your china painted, decorated, and "fired." The other day Mrs. Blank made arrangements by telephone with a celebrated lady decorator to paint and embellish her husband's shaving "mug" which was destined to be an Easter gift. She took the cup to Sherbrooke street, but unfortunately, in mistake, went to the wrong house, saying to the astonished maid who came to the door: "I've brought my 'mug' to be painted."

"Your mug?" queried the cockney servant.

"Yes; my husband's own 'mug.'"

"Well," quoth the maid, "you had better go to Madame Rachel's 'Beautiful-for-ever' shop near the Bone suckers (Bonsecours?) Market!"

ORIGIN AND NATURE OF VARNISH GUMS

Written for HARDWARE AND METAL by Allan J. Munro, of The Canada Paint Co.'s Montreal Staff.

So many of the readers of Hardware and Metal are interested in the handling of varnishes that I have willingly consented to construct some notes that may be of interest. Were I to attempt a list of the uses to which varnishes are put, or even a list of the various descriptions and properties that are called for by the many sided industries of the day, the details alone would be sufficient for a first paper.

I think it may be more acceptable to your readers that these notes should be limited to the more important gums or resins used, their sources, classification and general uses.

COPAL.

Taking first the general name of copal we enter quite a wide field, be-

Allan J. Munro.

cause gums bearing this general name are found in many parts of the world. The term is not restricted to the products of any particular region or series of plants, but is vaguely used for resins, very similar in their physical properties, but differing somewhat in their constitution, and altogether distinct as to their source.

Zanzibar, or East African copal, is by far the most important from a commercial pint of view, and is found in two distinct conditions; raw copal, and ripe or true copal.

The raw copal which is obtained direct from the trees or found at their roots, or near the surface of the ground, is not of much value.

The true or fossil copal is found from three to four feet deep in the earth, over a wide belt of the mainland coasts of Zanzibar. It occurs in pieces varying from the size of small pebbles up to pieces several ounces in weight, and occasionally lumps of three or four pounds have been obtained.

The copal is dug from the ground by the natives and a fair return for their moderate diligence is generally obtainable. The largest proportion of the resin is sent to the European and American markets.

Zanzibar copal, because of its extreme hardness, notwithstanding remarkable elasticity under changing temperature, is used for the very highest class of carriage finishing varnishes, also piano polishing varnishes, the peculiar properties of the gum rendering it specially suitable for exposure and for trying climatic conditions.

KAURI.

For the next in order among the copal class we must turn to New Zealand. Distributed throughout the Province of Auckland, we find the semi-fossil resin "Kauri Gum." It is the product of the once gigantic Kauri pine. Kauri gum is dug up in the open bush land where no vestige of the original tree remains, which shows that it is the product of a prehistoric forest. The gum exuded from the tree and slowly made its way into the ground at its base, becoming gradually buried more and more deeply.

At the present day there are about 12,000 men engaged in digging for Kauri gum. The outfit required is inexpensive, and men who are "driven into a corner" procure a wheelbarrow, spade and tapping rod, and start for the Kauri fields. The digger uses his rod to tap the ground where he thinks gum is likely to be found, and he can immediately tell by the sound produced, when he has struck gum.

Kauri of the highest grade is not as easily secured to-day as it was 30 years ago on account of the great number of diggers engaged in the work, and consequently a large quantity of second, third and fourth grade gum is being dug from swamps and marshy places to eke out the world's increasing demand. The scarcity of highest grade Kauri is shown by the fact that gum worth to-day 35c per pound was bought for 12c per pound 25 years ago.

The demand for Kauri gum was at first second to that for Zanzibar copal, but the greater affinity of linseed oil, manifested after the experts became accustomed to handling the New Zealand article, and the immense quantity that appeared to be available, ran up the consumption beyond any figures previously dreamed of; indeed, I suppose the existence in lump quantities, of a gum so easy of manipulation has done much to extend the use of varnish. Kauri is to-day used in the manufacture of interior varnishes of all descriptions.

AMBER.

For many years the Baltic coast has been the chief source of supply of amber. It is found in the form of thin plates or nodules, disseminated in the sands and clays. After heavy storms considerable quantities are found thrown up on the coast at the localities where it is regularly excavated, and the assumption is that deposits crop up in the shallow water near the shores, from which pieces become detached during the violent commotion of the water.

The district of Samland, in Eastern Germany, is the chief amber mining centre, and supplies almost entirely the markets of the world. Small quantities are also found on the Swedish and Danish coasts, and occasionally pieces are picked up along the shores of Sussex, Norfolk and Essex in England. Quite recently a report has become current that this valuable gum has been found in paying quantities on the shores of one of our Canadian lakes.

Amber is not used so extensively to-day by varnish manufacturers as it was some years ago; there are, however, violin varnishes on the market, guaranteed to consist wholly of amber, and it is occasionally used in the manufacture of high-class coach varnishes. It is unexcelled for hardness and smoothness of surface. Tobacco users know for what purpose the finest pieces of amber are used.

SHELLAC.

Shellac is produced in the East Indies in a most interesting manner. The resinous juice is drawn from the tree through

RETURNED APR 7 1904 Cut Books 17 Page 67 Q.W.S.

THE PAINT

RETURNED APR 7 1904

he handles for the coming season is an important matter with the dealer, now that the Spring rush is on.

The vital point is whether he has the brand that will bear out all the statements he makes concerning it and bring repeat orders to his store, or whether he has an inferior brand that will remain on his shelves for the season, or if it is sent out, drive away custom by proving itself unsatisfactory.

For thirty years we have been manufacturing paints, and in our

"ANCHOR" and "ENGLISH"

brands we offer a ready-mixed paint that is unapproachable.

They are the only brands manufactured in Canada that contain the world's standard white lead—BRANDRAM'S B.B. GENUINE. For years the merits of this white lead have been known. It is, without question, unequalled for whiteness, fineness and body, and will cover more surface than any other white lead paint.

The introduction of this white lead into Anchor and English liquid paints, combined with our experience, skilled workmen, and modern factories produces a paint that is better than any other on the Canadian market. A trial will convince the most skeptical.

We have a few advertising schemes we would like to lay before you.

"Send us a Post Card, and let us tell you all about them."

"There is Nothing Better than the Best."

MANUFACTURERS LONDON ENGLAND

punctures made by insects. These insects become covered with the juice, which soon dries on them, and under this resinous covering the larvae of the insects are developed, consuming the resin as they grow, and finally piercing the covering to escape. These burrowings are reddish brown in color, and constitute the shellac, which is at its best just before the larvae escape and should be collected at that point. The process reminds one of our ubiquitous potato bug and the development of its larvae under the leaf, which first shelters it, and then furnishes its food.

When collected, the shellac is put through a puryfying process respecting which the printed reports vary materially. One thing is sure that the astute Parsees have found out that there is such a thing as resin, and their generous use of the bright American article has, in these recent days, caused much dismay.

Shellac is used principally in the manufacture of knotting varnishes and lacquers for metal, wood and paper. I fear it is used also for undercoating wood where a more elastic substance might be substituted with advantage.

DAMAR.

Damar gum is the product of an East Indian pine and is collected mainly in the Straits Settlements. Equipped with large vessels the natives make incisions in the trunk of the tree near the ground, to stimulate the flow of resin, which exudes in the form of a thick liquid, and running into the vessel placed to receive it, soon solidifies into a transparent yellowish cake. East Indian damar is found on the market in the form of nodules or tears, of various sizes, and is used in making paper varnishes and enamels.

MANILA.

In the same district of India is also found a useful gum of the copal species, but softer and of less value than the copals already referred to. For interior varnishes of the second class, the gums known under the general name of Manilas, are of great utility. These gums are capable of such varied treatment, that a great variety of varnishes are made from them. Indeed, articles that may be handled, and which were of old time glossed with amber, are today finished in good style from a Manila solution.

The increasing knowledge of experts, now calls into requisition for various purposes, gums from nearly all parts of the world, but especially from South African ports, east and west, and from Brazil. The variety of gums constantly appearing on the markets, lends interest to the labors of the expert, whose business it is to ascertain their several uses, and it is safe for the consumer not to make any affidavit as to the antecedents of the varnish which he may be inclined to praise for its excellence.

Henderson & Potts' Factory.

IN a visit to the Montreal factory of Henderson & Potts, a Hardware and Metal representative found that although these works have only been established two years, the thirty years' experience of the firm in Halifax have enabled them to develop the most modern and economical system for the bringing to the highest standard their product as well as their method of production. Their new sample room is well worthy of a visit from anyone interested in mixed paints, etc.

A feature of the display is the attractiveness of their packages. On the west wall of the showroom mixed paints rise tier above tier, gallon cans on the bottom grading to 1 lb. handy color cans at the top. Above their "Anchor" handy varnishes are shown and still higher 1 lb. tins of wood filler in paste form. Continuing along the shelves "Anchor" aluminum paint is shown making an exceedingly pretty display with its blue label, printed in aluminum. Below this carriage gloss paints and farmers' wagon paints are tastefully arranged.

In the centre of the display is seen "Anchor" brand of ready mixed paint, with its red and yellow label. Some time ago a hole was punched in this label, and now the color of the paint contained in the can is shown. Last year Henderson & Potts placed another brand on the market, the same as "Anchor" liquid paint, called "English," both paints being the same quality; containing Brandram's B. B. genuine white lead.

Henderson & Potts are the only firm in Canada who manufacture this celebrated brand of white lead. It is unnecessary to say anything in its praise as it is so exceedingly well and favorably known.

The English label in black and white, with its Brandram's gold trade mark in the centre, bearing a number and showing the color, together with the "Anchor" brand, makes a striking display, and when one considers the high standard of quality to which they are kept it is easily seen why they are such favorites. Above the paint exhibit, oil and varnish stains are shown, and further along the shelves marine paints, distemper colors and cycle enamels.

Along the top shelves of this wall are alternate pyramids of Japanese enamels and hat enamels, and in the centre a very striking pyramid of Japanese enamel cans lying on the side, showing their painted tops, a feature adopted by Henderson & Potts years ago. With their bright and pleasing colors this pyramid makes a display that catches they eye immediately one enters the room.

Anchor hat enamel also have their tops painted in this manner, so one is able to tell at a glance what the contents are like.

Along the southern wall is a cabinet containing bottles of dry colors in every imaginable shade, all of which are manufactured on the premises, surmounted by three busts painted with Anchor gold and bronze paints.

On either side of this cabinet, "Anchor" and "Gold Medal" varnishes are shown. The "Gold Medal" varnish with its handsome lithographed cans making a pyramid that immediately appeals to the eye. Marbleine wall tints are also shown along this wall, put up in strong, neat 5 lb. packages. Along the floor are pyramids of 25 lb. irons containing colors in oil, white lead, putty, etc.

The shelving is stained with light oak oil stain, and the uprights in different colors of varnish stains. The amount of advertising matter shown was a revelation to our representative, comprising as it does framed cards, slat signs, color cards and folders of every description, lithographed tin signs, posters, weather-proof signs, booklets, etc. They also have a handsome little button, bearing a Union Jack and an Anchor, which they send to anyone.

At the different exhibitions where they have exhibited their goods, Henderson & Potts have captured three gold medald, one silver medal, one bronze medal, and two diplomas.

Standard Tinware Co. Enlarging.

The Standard Tinware Company of Montreal, who have long been known among the trade as manufacturers of paint cans, have decided to enlarge the scope of their business. They are making extensive additions to their factory to enable them to manufacture piece ware and Japan ware. Their reputation for manufacturing only the best quality of cans should be of value to them in their efforts to secure trade in these new lines.

Paint and Oil Markets

Quebec.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 18, 1904.

THE congestion on the railroads is somewhat relieved and there is a little more movement in paints, oils and varnishes. Merchants are now calling for immediate shipment and the paint houses are doing all in their power to meet the demand. The goods are congesting their warehouses and they are very anxious to ship. Everything therefore depends on the weather and the railroads.

White lead continues to move steadily without any stiffening in local prices, although dry white lead in primary markets is much higher. The liquid paint trade has made very serious inroads in recent years into the white lead business and orders for prepared paints are steadily increasing in volume. We quote:

Ground White Lead—Best brands, Government standard, $4.50; No. 1, $4.25 to $4.40; No. 2, $4 to $4.10; No. 3, $3.67 1-2 to $3.77 1-2; No. 4, $3.30 to $3.40, all f.o.b. Montreal.

Dry White Lead—$4.25 in casks, and in kegs $4.50.

Dry White Zinc—Pure dry, in casks, 6 1-4c; in 100-lb kegs, 6 3-4c; No. 1, zinc, in casks, 5 1-4c; in 100-lb kegs, 5 3-4c.

White Zinc—(ground in oil)—Pure, 25-lb irons, 8c; No. 1, 7c; No. 2, 6c.

Putty—We quote: Bulk, in barrels, $1.50; in 25-lb tins and irons, $1.85; bladdered putty in barrels, $1.75.

Orange Mineral—Casks, 7c; 100-lb kegs, 7 1-4c; smaller quantities, 8 1-4c.

Red Leads—Genuine red lead, in casks, $4.25; in 100-lb kegs, $4.50; in less quantities, $5.50 per 100 lb. No. 1 red lead, casks, $3; kegs, $4.25, and smaller quantities, $5.25.

Litharge—Ground, casks, 5c; in less quantities, 5 1-2c; flake litharge, casks, $5; smalls, $5.50 per 100 lb.

Linseed Oil—Raw, 1 to 4 barrels, 48 to 49c; 5 to 9 barrels, 47 to 48c; boiled, 1 to 4 barrels, 51 to 52c; 5 to 9 barrels, 50 to 51c. Delivered in Ontario between Montreal and Oshawa at 2c per gallon advance.

Turpentine—Single barrels, 92 to 93 1-2c; 2 to 4 barrels, 91 to 92 1-2c. Standard gallon of 8.6 pounds.

Benzine—25 to 26c.

Shellac Varnish—Pure white, $2.75 to $3.50; pure orange, $2.65 to $3.40; No. 1 orange shellac, $2.35 to $2.50.

Mixed Paints—$1.20 to $1.40 per gallon.

Castor Oil—8 3-4 to 9 1-4c in wholesale lots, and 1-2c additional for small lots.

Canadian Paris Green — Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c; 25-lb drums, 15 1-4c; 1-lb packages, 16c; 1-2-lb packages, 18c; 1-lb tins, 17c. Terms 2 per cent. discount for cash in 30 days or 90 days net.

English Paris Green—Barrels, 14 1-4c; arsenic kegs, 14 1-2c; 50 and 100 lb drums, 15c per lb; 25 lb drums, 15 1-2c; 1-lb paper boxes, 16c; 1-lb tin boxes, 17c. Terms, 2 per cent. 30 days; 90 days net.

Ontario.

Office of HARDWARE AND METAL,
10 Front street east.
Toronto, March 18, 1904.

A material improvement over recent week is reported. Orders which have been held back by the freight blockade are now being rushed forward, the railways now accepting freight to all sections of the province. A somewhat stronger tone is manifest in all lines except turpentine, which has eased off somewhat in the South and is expected to decline in this market before long. Shellac has been weak for some time, but is now firmer, on advance of 1 to 1 1-2c taking place in New York this week. Locally there is no change. Paris green is steady in price but is not selling readily. White lead stiffened materially during the week and the principal dealers insist that $4.65 is the lowest price they are now paying. Linseed oil has been reduced 2c by one of the larger houses, with only a slight trade doing in it. We quote as follows:

White Lead—Ex-Toronto, pure white lead, $4.65; No. 1, $4.20; No. 2, $3.90; No. 3, $3.50; No. 4, $3.25 in packages of 25 lb and upwards; 1-2c per lb extra will be charged for 12 1-2-lb packages; genuine dry white lead, in casks, $4.50.

Red Lead—Genuine in casks of 560 lb, $4.25; ditto, in kegs of 100 lb, $4.50; No. 1, in casks of 560 lb, $3.75 to $4; ditto, in kegs of 100 lb, $4.25.

White Zinc—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

Shingle Stain—In 5-gallon lots, 60 to 85c per gallon.

Paris White—90c to $1 per 100 lb.

Whiting—60 to 65c per 100 lb; Gilders' whiting, 75c.

Shellac—Pure orange, in barrels, $2.50 to $3; white, $2.50 per gallon; No. 1, $2.37 1-2, including price of can.

Linseed Oil—Raw, 1 to 2 bbls, 48c; boiled, 51c; 3 to 5 bbls, raw, 47c; boiled, 50c; 6 to 9 bbls, raw, 46c; boiled, 49c; delivered, Toronto, Hamilton, London and Guelph. One firm is quoting raw, 1 to 4 bbls, 47c; boiled, 50c; 5 to 9 bbls, raw, 46c; boiled 49c; 10 bbls and over, open; ex-Toronto, 2 per cent. off 30 days.

Turpentine—Single bbls, 92c; 2 to 4 bbls, 91c; 5 bbls and over, open Toronto, Hamilton, London and Guelph, with 2c extra for delivery outside. One firm quotes: Single bbls, 91 1-2c; 2 to 4 bbls, 90 1-2c, delivered; 5 bbls and over, open, ex-Toronto with 2 per cent. off 30 days. For less quantities than barhels, 5c per gallon extra will be added, and for 5-gallon packages, 50c and 10-gallon packages, 80c will be charged.

Glues—Broken sheet, in 200-lb bbls, 8 to 8 1-2c per lb; cabinet glue, in bbls, 11 1-2 to 12c; emery glue, in bbls, 17c; bookbinders', ground, 10 1-2c; finest American, white, 19c; No. 1 American white, 15c per lb.

Putty—Common, $1.65; pure (linseed oil) bladders in barrels, $2; bladders, in 100-lb kegs, $2.25; bulk in barrels, $1.75; bulk, less than barrels and up to 100-lb, $2.

Plaster Paris—New Brunswick, $2 per bbl.

Liquid Paints—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

Barn Paints—65 to 70c per gallon.

Castor Oil—English, in cases, 7 1-2 to 8c per pound, and 8 1-2 to 9c for single tins.

English Paris Green — Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 to 100-lb drums, 14c; 1-lb packages, 15c; 1-lb tins, 16c; 1-2-lb tins, 18c.

Canadian Paris Green (present delivery)—Petroleum bbls, 13 1-4c; arsenic kegs, 13 1-2c; 50 and 100-lb drums, 14c; 1-2-lb tins, 18c.

STERLING FOR INSIDE WORK PURE PREPARED FOR OUTSIDE WORK PAINTS

——that great cradle of a new nation, where many homes are being reared, there is a paint being sold that is building a good name for hardware dealers.

STERLING PAINT

is a true friend of the man that sells it. It serves the buyer to his complete satisfaction. It endures in storm and sun. It brings no discredit to maker or seller. You can have the agency for your section and we'll help you sell the paint after you buy it. Write us for our proposal.

THE GRANT-HAMILTON OIL CO. LIMITED

MAKERS OF STERLING PAINTS — TORONTO.

50 feet. First break, 100 feet, $3.25; second break, $3.45; third break, $3.95; fourth break, $4.20.

TORONTO.

A fairly active movement from stock is reported. Prices are easy, the extra discount of 15 to 20 per cent. now being quoted by all in the trade. We quote: Star, first break at $3.10 per 100 feet and Double Diamond, first break, at $5.10. Discount 15 to 20 per cent.

PREPARE FOR SPRING.

FOLLOWING up the articles published in previous numbers of Hardware and Metal, in which we have pointed out several reasons why concentrated lye is not only a hardware line, but a profitable one and deserving of more attention than it usually receives at the hands of the average hardware merchant, we now wish to call the attention of the trade to the fact that the time for the Spring housecleaning will soon be here, when every housewife in Canada will require the goods, it being used largely for this purpose. Many of them will require other articles such as brushes, pails, stepladders and the various other things, that are used in the "Spring clean up"; and hardware merchants should see that they have a sufficient stock of concentrated lye on hand to meet the demand, which is always heavier in the Spring than at any other time of the year, owing, as stated, to the large quantities used for housecleaning, removing old paint, spraying trees, etc. A little effort on the part of the man behind the counter in directing the attention of his customers to the enormous saving of time, trouble and hard work to be effected by the use of this "universal cleanser" will result in largely increased sales, and consequently, increased profits. Make a good display of lye in your store and call the attention of your customers to it. Let them know lye can be bought in a hardware store. Remember it is used every day by people who are buying goods from you.

A STRIKING ADVERTISEMENT.

A station like the Herald Mercury,
New lighted on a Heaven-kissing hill.

—Shakespeare.

THE striking advertisement of the Canada Paint Company, Limited, on another page, depicts Mercury, the swift, ready messenger of the gods. Mercury is the god of merchandise and trade. The figure bears an arc light and is typical of the illumination and brightness wherever the Canada Paint Company's colors and varnishes are used.

The advertisements of this company never "harp upon one string." Variety is the predominating note. They swing from grave to gay, from prose to poetry; always readable, generally enjoyable and frequently full of valuable information. Their announcements do not savor of the big bass drum or the wide mouthed horn.

Professional "Ad" writers, as our Yankee friends call them, are not employed by the Canada Paint Company. The advertisements are suggested and written by the regular members of the staff in Montreal and Toronto.

The Canada Paint Company were amongst the first advertisers in Hardware and Metal, and the steady continuance of their announcements proves that they have been mutually beneficial.

FYFFE SCALE CO.

The Fyffe Scale Company, of Montreal, are well known to the trade as they have been in business for 38 years. They make all conceivable kinds of scales and during their long business experience have established an enviable reputation among their customers. Readers will notice their advertisement in another page.

HIGH-CLASS VARNISHES ONLY

Which can be obtained direct from the works or from the principal Color Dealers in Canada

It is put up in the following sized packages:

1 Gallon Can
½-Gallon Can
¼-Gallon Can
1 Pint Can
½-Pint Can

See that our brass seal is on each package.

"ELASTILITE VARNISH"

It possesses the peculiarity of combining the good qualities o both an inside and an outside varnish, while being entirely free from their faults.

It brushes easily, flows freely, dries well; is as durable as the best coach body varnishes, and has a brilliant finish which lasts. It will not crack, chip, turn white, bloom, crawl, nor pit. It is designed for either interior or exterior use on buildings, doors, furniture, bath rooms, boats, carriages, and in fact anything and everything you wish to beautify or preserve by varnishing where a natural lustre finish is required.

As it thoroughly closes the pores of wood and metal against disease germs, it is especially suitable for

Hospitals, Public Buildings, Sanitariums,

and wherever sanitary conditions are to be considered.

If you have "ELASTILITE" and "OROLITE" in stock you need keep no other varnishes, as all kinds of finishing can be done, and done perfectly, with these two brands.

A Reason or Two

Why every dealer should stock **CHURCH'S COLD WATER**

ALABASTINE

Because it has an established reputation—always working to the satisfaction of the user—and possesses every advantage necessary or desirable in a material for wall-tinting and decorating.

Because by a thorough system of advertising **everybody that reads** knows about **ALABASTINE,** and when in want of anything to fix up walls, calls for it as naturally as for any staple in the hardware, dry goods or grocery line.

Because of its convenience, and its permanent and sanitary features, Mr. M. B. Church, the original inventor of **ALABASTINE** and now President of this Company, was the first to produce a practical wall-coating adapted for use in **cold water,** a process that is patented in Canada and other countries, that has forced the manufacturers of hot water preparations, at the risk of patent infringements, to imitate his example.

ALABASTINE is for sale by Wholesale Hardware and Paint Dealers everywhere. Also by

SPECIALTIES FOR THE OFFICE.

ONE of the growing concerns of Canada is the Office Specialty Mfg. Co., Limited, with executive offices in Toronto, and branches in the principal cities from Halifax in the east to Vancouver in the west.

The aim of this company has been to make the slogan "Made in Canada" represent a desire for the highest excellence, and the public are gradually being educated to realize that the home made article can rank with the best of goods of foreign manufacture.

The line of office furniture and filing devices made by the Office Specialty Mfg. Co. is of the highest grade, both in workmanship and finish, and does more in a practical way to assist the "Made in Canada" campaign than could be done in any other manner.

The business needs of to-day require that men shall have their business so thoroughly systematized that they can at a moment's notice place their hand on any information or record which they may require, and new systems are being constantly evolved for the purpose of saving time and labor in this respect.

The most notable of these is the system of card indexing, which can be adapted to any line of business for keeping record of stock, costs, quotations given or received, list of customers for circularizing purposes, or in fact for keeping any business record. The Office Specialty Mfg. Co. has made a special study of this system and predicts great things for it in the future.

Though the home trade has been given most attention yet the export trade has not been neglected, as is evidenced by the large quantity of goods shipped to Europe, New Zealand, and Australia. The company has been compelled to enlarge its factories to keep pace with the steady flow of orders, the accompanying cut showing the magnitude of the works at present. The offices of the company at Toronto have also been remodelled and enlarged, and the firm is prepared for the largest year's business it has ever had.

Plant of The Office Specialty Mfg. Co.

CHANGE IN AGENCY.

WE have been advised that Walter Grose has been compelled to resign his position as representative of the Gurney, Tilden Co., for the Province of Quebec and the Maritime Provinces, to enable him to devote more of his time to the interests of the Ontario Lantern and Lamp Co., of Hamilton, who are adding several new lines to their business, including incandescent lamp reflectors, shade rings, sockets, reflector lamps and lanterns. They are now producing 1,500 Shelby and Brilliant lamps daily for which the demand is rapidly increasing and their new catalogue will show a variety of 18 different patterns in tubular and other lanterns in ton, brass and copper plated, quantities of which are being exported to Australia, New Zealand and South Africa. The entire output of this company is sold through the jobbing trade in the large cities.

The Gurney, Tilden Co. have appointed Nicoll & Barr, Room 114 Coristine Building and 38 Dock street, their representatives in the territory formely covered by Walter Grose.

GASOLINE ENGINES AND LAUNCHES.

While in Lindsay a few days ago the Hardware and Metal representative was shown through the works of the Sylvester Mfg. Co., Lindsay, Ont. After examining the implement shops he visited the gasoline engine and launch department, where a strong showing was made.

The Sylvester Co. manufacture a full line of gasoline engines, from 1½ to 16 horse power, stationary, 8 h. p. to 16 h. p. portable, and 1½ h. p. to 6 h. p. marine. The simplicity and ease of operation are evident from their construction.

The materials used in these engines are of the choicest procurable, all parts of the engine being made at the factory, (excepting crank shafts, which are imported), thus ensuring close personal inspection and careful attention being given to each part. The launch department is situated a short distance from the main factory, on the banks of the river, where all boats are tested. The productions of the comuany in this line are certainly a credit to any firm, having a model which has speed as well as strength, and beautifully finished throughout. The company build launches is sizes from 18 to 25 ft., fitted with their engines. The popularity enjoyed by the Sylvester Co. on account of their engines and launches giving entire satisfaction, is demonstrated by the orders received by the firm, necessitating their large force of mechanics kept continuously busy.

The Sylvester Co. carried off the highest award for 1902-3 at the Toronto Industrial Exhibition, also at London exhibition, last vear, which speaks volumes for the company's efforts in building engines and launches. As the season will soon be open for the gasoline engine and launch trade, the trade are referred to the firm's advertisement on another page. Write for their catalogue, which will fully explain their productions.

NEW FIRM FOR CALGARY.

The Gurney Standard Metal Co., Limited, Calgary, N. W. T., have been organized to carry on a jobbing business in stoves, furnaces, radiators, plumbers' supplies, scales, etc. The president of the company, which opened for business March 1st, is W. Roper Hull, Calgary; the vice-president, Edward Gurney, president of the Gurney Foundry Co., Toronto. The managing director is A. P. Horsman, late manager of the J. H. Ashdown Hardware Co., at Calgary, while W. Gilies, accountant, has been appointed secretary-treasurer of the company.

HEATING AND PLUMBING

PLUMBING GOODS IN THE HARDWARE STORE

HEALTH is so needful to personal comfort and national progress that there is every reason for the precautions that are being taken in the principal towns and cities of the country to ensure the observance of hygienic principles in plumbing work, whether it be in the installation of a closet system or the laying of a drain.

These precautions necessitate that any man who desires to engage in plumbing contract work must be equipped with a wide knowledge of its needs, theoretical as well as technical.

Any man who equips himself with the needs of the business may look forward to a large expansion in his plumbing trade, especially in the towns, during the next decade or so. Waterworks systems are being installed almost everywhere; and a demand for plumbing conveniences is the inevitable sequence of waterworks. In the country, too, many of the wealthier farmers are putting in windmills and private waterworks systems.

The question then, is, what share of this is to come to the hardware dealer? The answer must rest with the dealer. If he is prepared to equip himself with the necessary knowledge or to secure the service of a partner or an employe so equipped he is in the strongest possible position for such work. His hardware business necessitates his being on the alert for news of building operations and in looking for contract work such as eavetroughing, roofing, as well for the sale of building material and supplies so he is right on the ground for plumbing and heating work.

Some hardware dealers are not game to go to the trouble of studying the plumbing business or to the expense of employing an expert plumber, but have secured quite a connection in the trade. They have made arrangements with local plumbers to do no contract or repair work but to carry the supplies, giving a liberal margin to the plumber and keeping up the price to the public.

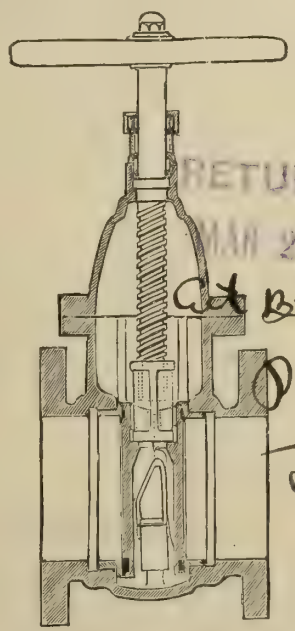
There is money in plumbing supplies for the retailer, and in many towns the hardwareman is the proper person to get this trade.

The "American" Wrench.

The Joseph F. McCoy Co., 157 Chambers street, New York, are manufacturers of the "American" brand of wrenches. These are made of exceptionally strong and durable machinery, grip the pipe firmly, yet releases hold easily on account of the inserted or back jaw being smooth, and they do not slip, crush or mutilate the pipe. They are packed in slide cover wood boxes, ½ dozen in box. Any Canadian house interested in wrenches would do well to write for full particulars regarding the terms on which it is to be offered on the Canadian market.

Water Works Supplies.

THE Fairbanks Company, whose Canadian headquarters are at 747-749 Craig street, Montreal, with branches at Toronto, Winnipeg and Vancouver, have recently added to their stock water works supplies in the shape

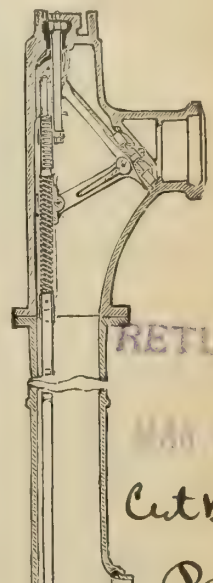


Shirley Gate.

of P. & C. hydrants and Shirley Gate Valves, which are herewith illustrated.

The distinguishing feature of the Shirley gate valve is that it is spherical in shape, and all its surfaces being rounded there are no corners for the water to get into. This is acknowledged by experts to be the right lines on which to build a valve for water. The Shirley valve is bronze mounted, has its gates faced with bronze and also has bronze seat rings which are faced, making a bronze to bronze contact and entirely preventing any rust or corrosion where the gate of the valve comes in contact with the seat.

The valve has a double gate in the preparation of which much ingenuity has been expended, special pains being taken to remedy such defects as experience has shown often to be associated with valves having a double gate. This gate is arranged so that in opening one half starts ahead of the other, therby tending to equalize the pressure of the water upon the gate of the valve and allowing it to be opened with much greater ease than if the gate was solid, or if both parts of gate started at once.



Hydrant.

Another feature in the construction of the gate is the manner in which it is brought against the seat rings, this being done by means of a rocker and a wedge shaped piece placed between the two halves of the gate. Immediately the valve is closed they are forced squarely against the seat rings eliminating much of the wear incidental to a valve having a wedge shaped gate. A free open space is left between the two parts of the gate and there is no possibility of cramping the spindle or of the space becoming filled with scale and mud.

The P. & C. hydrant bids fair to be a strong competitor in the hydrant market since it has several points of advantage.

As will be seen by referring to the cut, this hydrant has a straight barrel

secured through their Winnipeg branch the contract to furnish the hydrants and valves for the water works about to be constructed at St. Boniface. The con- barrel were built in curpes. ...One of the most important points in connection with the hydrant is the positive action of the drip valve which is not actuated by a spring but is worked by the operating rod itself. The rod has a fine thread which closes the drip valve tight when the hydrant is opened, and opens the drip valve when the hydrant is closed. As the drip valve is at the bottom of the hydrant all the water is allowed to run out and moreover no dirt, pebbles, roots or other foreign matter can obstruct it. The valve is left free at all times to perform its duty and there is no possibility of the hydrant freezing. The valve discs are all made of solid rubber and the seats are bronze. As the operating rod and, in fact, all working parts, are made of bronze, no rust or corrosion of those parts can take place.

The Fairbanks Company have recently and an unobstructed water way right through from the in-take to the hose nozzle, which gives a greater force to barrel were built in curves. One of the tract was secured because the purchasers recognized the advantages described above. They were also influenced by the ease of access to the working parts of the hydrant in case any repairs should be necessary. It is not necessary to dig up the hydrant to make repairs for the working parts can be taken out by removing the cap. The Fairbanks Company will furnish further information to any readers who ask for it.

Building Notes.

A new Methodist church will be erected in Berlin, Ont.

A four frame house terrace will be erected on Sargent and Langside streets, Winnipeg, this season.

Fulljames & Holmes are erecting two new frame dwellings on Bannatyne avenue, Winnipeg, this Spring.

The Zion church congregation of Winnipeg, are going to erect a new church on Pacific avenue with a seating capacity of 1,200. The architect is J. Chisholm.

Geo. Persichini is going to erect a new brick apartment block on Cumberland avenue, Winnipeg.

A terrace of three dwellings is going to be erected on Smith street, Winnipeg, by Philip Marrin. The dwellings will be of solid brick and will be three storeys. The architect is Jas. Chisholm.

The Glebe Presbyterian Church, Ottawa, are erecting a $23,000 church on Carling avenue and Lyon street.

A leading builder and contractor of Galt, Ont., says that if building material does not go up in price there will be a greater building boom this season than Galt has seen. He says that many enquiries are being received, and if no set back occurs there will be many houses put up this season.

Wholesale Hardware Trade in the West

By Cora E. Hind.

IN no line of trade is the divergence of the West and East more marked than in that of hardware. Lying 1,500 miles from any manufactures the Winnipeg hardware confronted with the problem of providing, while the cheap water rates were in force, a stock of goods that would carry them over the period when navigation should be closed. From its first inception the hardware jobbing trade meant an unusual outlay of money not only in stock but in buildings.

In something less than thirty years Winnipeg has emerged from the state of having no wholesale hardware houses to having the very finest and largest in the Dominion of Canada, and with very few rivals in the big cities to the south of the line. It is an everyday story for Eastern hardware jobbers to stand somewhat aghast at the enormous buildings for this business that have been erected in the past few years and yet there are already others under way that will out-top those already built by at least a storey.

The energy and enterprise that has built the wholesale hardware trade of the West is represented by men that are still considered young men even in the West.

Geo. D. Wood & Co.'s Wholesale Warehouse.

GEO. D. WOOD & CO.

One of the oldest established and largest wholesale hardware houses in the West is that of Geo. D. Wood & Co., as the beginning of their business in the West was the sending of a stock of hardware by Wood, Vallance & Co., of Hamilton, to the then little known post of Fort Garry or Winnipeg, away back in the "sixties," when Alex. Begg succeeded in firing the merchants of Hamilton with the grand opportunities for trade on the banks of the Red River. From that small beginning the house has grown first to a branch of the Hamilton house, later to a separate company and lastly to the enormous warehouse represented in the cut. From bottom to top this great warehouse is full of shelf and heavy hardware, and in addition an enormous track warehouse is also found necessary to care for the stock required at this point.

This house has still interests in common with the one in Hamilton, but is in all respects a purely Western house and controls the trade from Port Arthur to the Rockies. In erecting the present home of the firm care was taken to provide ample space for bar iron, in which a tremendous trade is done, and the iron house on the ground floor is one of the finest in the whole of Canada. George D. Wood, head of the Winnipeg house, is one of Winnipeg's best known citizens. Though never going in for public life he has taken a keen interest in the welfare of the city and has contributed his full share to its schemes of

Warehouse of The J. H. Ashdown Co., Limited.

philanthropy and beneficience. In erecting the new premises one of the departments that received the greatest personal care from Mr. Wood, were the offices for the large working staff. They are well lighted, well ventilated and commodious, so that the employes may be able to accomplish the maximum of work at the minimum expenditure of energy.

THE J. H. ASHDOWN CO., LIMITED.

To mention the hardware trade in Manitoba and not speak of J. H. Ashdown would indeed be Hamlet with Hamlet left out. There is no man in the West more frequently quoted to the rising generation as an example of what diligence and enterprise can accomplish than the head of the present company, "The J. H. Ashdown Company, Limited."

Mr. Ashdown came to the West sometime in 1869. Begg, in his "Ten Years in Winnipeg," says of him: "James H. Ashdown arrived in Winnipeg shortly before the rebellion, and started a small tinsmith's shop on Post Office street. Unfortunately for him, however, he became mixed up in the troubles of the country, and was held for some time in durance vile, a prisoner at Fort Garry, during his sojourn in which his shop remained closed to the great loss of the owner. After his release Mr. Ashdown bought out one Moser—a tinsmith who left for the States—and by strict attention his business and hard work began to build up a good trade." This attention to business and hard work have characterized Mr. Ashdown from that day to this, so that perhaps in this country of great possibilities it is not surprising that the small shop on Post Office street should have grown to the stately wholesale warehouse represented in the cut, to a retail house almost as large as the wholesale and to a number of branch retail businesses in various towns throughout the West. The formation of the concern into a limited company is only a few years old, and up to that time J. H. Ashdown was the moving spirit that kept in touch all the ramifications of this vast business. Apart from his own business Mr. Ashdown has taken an interest in both civic and political matters, but the greater portion of his leisure time has been devoted to the development of the Y. M. C. A., and he has also been a warm friend of "The Children's Home." One wholesale warehouse is so like another in its stock that it would be tiresome to describe them. It might be mentioned, however, that this house carries stoves in addition to hardware of all kinds.

The Marshall Wells Co. and Merrick, Anderson & Co.

MILLER, MORSE & CO.

Miller, Morse & Co. is another of the well established hardware houses. For many years they have occupied comfortable and convenient premises on Princess street, but they have found these too straightened for their growing business. Last year they procured a track frontage immediately in the rear of their present quarters and extending from street to street. On this they erected an iron house one storey and basement, fronting on Bannatyne avenue, and it is understood that this coming season they will erect a seven storey warehouse on the balance of their lot with frontages on Adelaide street and McDermott avenue. Messrs. Miller, Morse & Co., are both comparatively young men and appear to devote themselves entirely to the development of their business interests.

THE JAMES ROBERTSON CO., LIMITED.

The James Robertson Company, Limited, have been in the wholesale hardware trade in the West for many years. They occupy premises on Pacific avenue east, but these have been erected for a number of years. The stock carried is that of general hardware and metals, and the present manager is W. C. Reaman.

THE MARSHALL WELLS COMPANY.

The Marshall Wells Hardware Company is the last one to join the ranks of hardware houses in the Canadian West. For about twelve years the Marshall Wells Company, of Duluth, sent representatives through the Canadian West, and finding the outlook good it was decided to form a Manitoba house. An entire new company was formed and a handsome warehouse erected on Bannatyne avenue east. Although there is American capital in the company it is in every other respect distinctly a Western Canadian house, and controls trade from Fort William to the Rockies. The warehouse erected three years ago, though five storey in height, has already grown too small for the growing business, and plans are now under way

MERRICK, ANDERSON & CO.
WINNIPEG.

to erect a seven storey warehouse. The house carries a full line of shelf and heavy hardware, iron and steel and lumbermen's and miners' supplies and stoves. W. G. McFarlane has managed the house since its opening in Winnipeg. Mr. McFarlane is one of the young men who has grown up in the hardware business in the West, having at one time travelled for J. H. Ashdown & Co., and afterwards for the Marshall Wells Co., before the Winnipeg company was formed. He is among the youngest managers of large wholesale concerns in the West and incidentally is an ardent curler.

THE M'CLARY MFG., COMPANY.

This company opened a branch here as early as 1882 in a small warehouse on Point Douglass avenue, and afterwards an up-town showroom. Three years ago the company built a fine warehouse 55x135, and four storeys high. Last year they found it necessary to add two additional storeys, and now carry a very large stock of stoves, enamel ware, tinware, metals, galvanized iron, Canada plates and tinsmiths' supplies. The Winnipeg branch is still in charge of Mr. W. J. Driscoll, who opened for the company here in 1882, and this house controls all the business of the company from Port Arthur to the Rockies.

MERRICK, ANDERSON & COMPANY.

This house is rather unique in the hardware business in that Merrick & Anderson act as manufacturers' agents for some dozen or more allied of kindred trades. The house has been established in Winnipeg since 1882, and there are no two better known men in the West than George A. Merrick and T. A. Anderson. A few years ago they erected for themselves a fine warehouse on Bannatyne avenue east, the building having a frontage of 77 feet by a depth of 90, and

The Brantford Cordage Co., LIMITED.

Brantford, - Canada.

being five storeys and a basement. The lines represented by this house include "Grand Jewel" stoves, "Monarch" malleable steel ranges, furnaces, scales, paints, stamped and enamelled tinware, steelware of all kinds, building paper, jute and cotton bags, pumps, sewing machines and many other lines.

In addition to the houses that may be considered exclusively Western, Caverhill, Learmont & Co., and the James Smart Manufacturing Company have branches here. The Gurney Stove Company has a large warehouse here and nearly all of the well-known Eastern stove manufacturers are well represented, but this article has only sought to deal with what may be termed truly Western wholesale houses for hardware and kindred lines.

Nearly all the houses mentioned have excellent track facilities and are modern in the full sense of the term. All are doing well and there are no men in the West that are more highly valued for the pioneer work they have done than the wholesale hardware merchants.

PERSONAL MENTION.

Mr. Geo. Caverhill, of Caverhill, Learmont & Co., is in Atlantic City, N.J.

Mr. Archie MacFarlane, of A. MacFarlane & Co., Montreal, was in New York this week on business.

Mr. Gordon Seybold, of the Seybold, Sons & Co., Montreal, left on Tuesday morning for a business trip to Ottawa and other points in Ontario.

Mr. Stanley, of Stanley Rule and Level Co., New Britain, Conn., and Mr. Peck, the sales manager of the company, were in Montreal last week visiting the hardware trade.

Mr. Henry J. Fuller, manager of the Fairbanks Company, Montreal, left this week for a month or six weeks' visit to Winnipeg and Vancouver to inspect the company's warehouses in those cities.

Mr. R. J. Soden, who has recently been appointed sales agent for the West for the Nova Scotia Steel and Coal Co., was in Montreal last week in the interests of his firm. Mr. Soden is visiting Toronto this week.

Mr. Henry Stromberg, of Jaffe & Sons, Manchester, Eng., who has been in Canada consulting with Mr. Alexander Gibb of Montreal, agent for his firm, and visiting the Canadian trade, has returned to England.

Mr. George E. Drummond, of Drummond, McCall & Co. Montreal, president of the Canadian Manufacturers' Association, left for England last week. Mr. Drummond will represent the Canadian Manufacturers' Association at the dinner of the London Chamber of Commerce on March 25th. This is a gathering of great importance at the present stage of the English fiscal fight and no doubt President Drummond's remarks will attract great attention. He will explain the attitude of the Canadian Manufacturers' Association towards the Chamberlain tariff proposals.

IMPROVING THEIR RANGE.

THE Western Foundry Co., Wingham, Ont., are determined to keep the good wishes of the trade as well as the Canadian public. They write under date of March 11, as follows:

"We are entirely re-dressing our Crown Huron range for this year and feel sure that after you have seen a sample that you will pronounce it to be the finest range ever produced for the money. We might state that the improvements which we are adding will not in any way affect or alter the interior construction of the range, as this we found to be so perfect as to be beyond improvement.

"It has been our experience since placing the 'Crown Huron' upon the market that 'in nine cases out of ten' it has sold itself while standing on the dealer's floor. Thus requiring practically no effort on the part of the salesman to consummate the sale, its characteristic dignity of design, uniformity of oultine, smooth perfect castings, and well finished appearance, immediately capturing the purchaser's eye.

"Being desirous, however, of keeping well in advance of our competitors, we have made such improvements in its exterior appearance that will make it, if possible, a more popular and better seller than ever, and we fell confident that it is destined to become in a very short time the leading range on the Canadian market.

"It is 'up to' every live and energetic dealer, therefore, who is desirous of securing the most modern and up-to-date as well as moderate priced range on the market, to immediately secure for himself the agency for the 'Huron' line and thus have upon his floor goods with which he can meet any and all competition.

"We take this opportunity of also advising you that we are making extensive additions to our line of patterns, embrasing a full line of coal and wood heaters, and which when completed will be the newest and most modern line of heaters on this market.

"Not belonging to any association or trust, we are in a position to assure you that our prices will be such as to enable you to command the trade in your vicinity.

"It is our aim and intention to be represented in every town throughout Canada, and we hope, therefore, to have the pleasure of receiving an application from you for the agency of our line."

COLDWATER, ONT
HARDWARE & METAL,
TORONTO.

Dear Sirs:—Your favor of the 29th January to hand re International Stock Food. I have only had their agency for about three months, and must say I have had great results and the best of satisfaction from International Stock Food.

International Stock Food not only pleases the merchant who sells it, but also makes a customer for me at every place where I put the goods in. International people know how to advertise so well that I have scarcely any effort in selling their food, as the farmer understands exactly what he wants from the way the firm advertises direct to the farmer. I have never handled a line of goods that gave me better results. Yours truly,

(Sgd.) H. M. BORLAND.

INTERNATIONAL STOCK FOOD

INTERNATIONAL STOCK FOOD will prove the best specialty line you ever handled, being a ready seller and netting you a large per cent. of profit. Over 40,000 dealers are to-day handling these goods, among them being many hardware men. We are anxious to increase the number of our agents, and would like to have you drop us a card so that we can furnish you with full particulars of our Special Dan Patch Lithograph Offer.

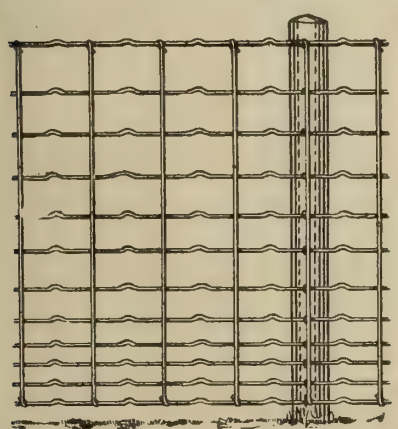
Electrically Welded
WIRE FENCING



THE NEATEST, STRONGEST AND MOST DURABLE WIRE FENCE IN THE WORLD.

All made of No. 9 best galvanized Steel Wire, without any twists, locks, or other fasteners for cross wires, on which snow and ice can lodge, and thus hold moisture and cause rust.

And the cheapest fence in the world, according to weight of metal used.

All stay wires only twelve inches apart, and meshes must retain uniform shape, as wires cannot slip from proper position,

Large discounts allowed off List Prices.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street.
Montreal, March 18, 1904.

Hardware.

THE freight blockade is now lifted and the railways are accepting consignments for points on both main and branch lines. After the long delay the railroads have more business than they can handle and in all probability it will be some weeks before a return to normal conditions can be expected. Wholesale houses complain that owing to the congestion of traffic they can not get supplies from the United States. Miles of freight cars are stalled at Buffalo and other points and it will be several weeks before supplies will be obtainable. Wholesale houses say that orders received this week are equal to the corresponding week in 1903 but there is not a sufficient increase to compensate for the slackness of a few weeks ago. Many jobbers have come to the conclusion that a good proportion of the trade lost during the snow blockade is lost for good.

There are few changes to report. Proof coil chain is being sold a trifle cheaper but as there is no agreed price it is impossible to quote. Wooden tubs are about 5 per cent. higher. Sashcord has been advanced again.

Sap Spouts—These are in splendid demand this week. The price is $6.75 per 1,000. Cook's sugar bits are selling at 50 per cent. off list.

Churns—Inquiries for churns are numerous and there has been considerable business during the last few weeks. The discounts on "Favorite" are 40 and 15 per cent. f.o.b. Montreal and 30 and 10 per cent. f.o.b. factory.

Poultry Netting—Some shipments are being made this week but the greater number of orders received have been for April delivery. Business is still brisk. Prices remain firm at former quotations. Discounts are, for 2-inch 19-gauge standard extras are 60 and 5; for 2-inch 16-gauge, the discounts are 55 and 5 per cent.

Galvanized Poultry Netting Staples—In steady request at the following prices: Sizes 5-8, 3-4, 1, 1 1-8, 10-lb boxes, $12.50 list; 25 and 50-lb boxes, $12.25 list; 100-lb boxes, $12 list. Less 57 1-2 per cent.

Bed Staples—The discounts on lists of B. Greening Wire Co. and Montreal Rolling Mills Co. is 57 1-2 per cent. The discounts on the Dominion Wire Company's list are 25 and 2 1-2 per cent.

Blind Staples—The discount is 40 per cent.

Boxwood Rules—Discounts range from 52 1-2 to 50 per cent. off list.

Hardwood Step Ladders—As noted last week, prices are not uniform and it is impossible to quote with exactitude, but there has been a general advance of about 20 per cent.

Wooden Goods—All lines of woodenware are firm in price. Some lines of wooden tubs have been advanced about 5 per cent.

Heavy Screw Hooks and Hinges—The price of size 12 inches and upwards has been fixed at $3.25 per 100 lbs, which is a decline of 25 cents; the price of 6, 8 and 10-inch sizes is $4.25, which is a decline of 25 cents per 100 lbs.

Lawn Mowers—The demand continues steady at the following unchanged prices: With 8-inch wheel, sizes 12, 14 and 16, $2.65 each; with 9-inch wheel, size 12, $3; size 14, $3.12 1-2; size 16, $3.25 each; Philadelphia pattern, size 12, $3.25, size 14, $3.50; size 16, $3.75 each; High Wheel, size 12, $4; 14, $4.25; 16, $4.50; 18, $4.75; 20, $5.25 each.

Garden Hose—Like other lines of lawn goods, garden hose is in excellent request this week. The discounts are: Trade, 75 per cent.; Western, 65 and 10 per cent.; White, 40 and 10 per cent.; Maroon, 40 and 10 per cent.; cotton, 60 per cent.

Harvest Tools—The discount is 60 per cent.

Spring Hinges—In steady request at the following prices: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Game Traps—The discount on "Victor" is 72 1-2 per cent. and on "Hawley and Norton" 60 and 2 1-2 per cent. An occasional order is still being received.

Wire Nails—There is some inquiry for Spring shipment. We quote again as follows: $2.40 per keg carlots, and $2.45 per keg in small lots f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, and St. John.

Cut Nails—Prices are steady but there is very little business. We quote $2.30 per keg f.o.b. Montreal, Toronto, Hamilton and St. John.

Fence Staples—Prices are as follows: $3 per 100-lb keg for galvanized, and $2.80 for bright; 25 to 50-lb packages, 25c extra.

Pressed Spikes—The discount is 25 per cent.

Horseshoes—Trade is very quiet. Prices are as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.56; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; light steel shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

Horsenails—We quote: C brand, 40, 10 and 7 1-2 per cent. off; other brands 55 to 57 1-2 per cent. off.

Screen Wire Cloth—The price is $1.50 per 100 square feet.

Galvanized Coil Spring Wire—There is a little more activity this week. Prices are as follows: Nos. 6, 7 and 8, $3.20; No. 9, $2.70; No. 10, $3.30; No. 11, Carlots 5 cents less. Freight prepaid in $3.35; No. 12, $2.95; No. 13, $3.10. les sthan car lots to extent of 25 cents and in car lots to extent of 20 cents. For following factory points freight is equalized: Montreal, Hamilton, London, Welland, Windsor, Stratford.

Galvanized Wire—There is a further improvement in business this week. Prices are still as follows: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c extra per 100 lbs will be charged.

Barb Wire—We quote as follows: $2.75 per 100 lbs f.o.b. Montreal and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Smooth Steel Wire—This line is in moderate demand. We quote the following prices: Bright and annealed, $2.50 per 100 lb f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb are now as follows: Coppered wire, 60c; tinned wire, $2; oiling, 10c; spring wire, $1.25; best steel wire, 75c; bright soft-drawn, 15c; hay-baling, 20 to 25c.

Annealed Hay Wire—As was noted in our last issue, annealed hay wire and annealed and oiled wire are now sold at list prices plus the usual extras. This is equivalent to an advance of about 25 cents per 100 lbs on hay wire.

Fine Steel Wire—There is only a moderate enquiry. The discount is 25 per cent, with net extras as follows: 1 and 2-lb hanks, 25c per 100-lbs; 1-1-lb hanks, 37 1-2c; 1-4-lb hanks, 50c.

Brass Wire—The market is quiet. The discount is 60 per cent.

Copper Wire—There is very little doing. The discount is 60 per cent.

Rivets and Burrs—In excellent demand at the following unchanged discounts from list prices: Best iron rivets, section carriage and wagon box, black rivets, tinned do. coopers' rivets and tinned swede rivets, 60 and 10 per cent.; swedes iron burrs are quoted at

55 per cent. off; copper rivets with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb carton boxes are quoted at 60 and 10 per cent. off list.

Bolts and Nuts—The discounts remain as follows: Carriage bolts, common ($1) list, 3-16 and 1-4 diameter, 60 per cent.; carriage bolts, common ($1) list, 5-16 and 3-8 diameter, 55 and 5 per cent.; carriage bolts, common ($1) list, 7-16 diameter and up, 55 per cent.; carriage bolts, full square ($2.40) list, 60 per cent.; carriage bolts, Norway iron ($3) list, 60 per cent.; machine bolts, 3-8 diameter and under, 60 per cent.; machine bolts, 7-16 diameter and larger, 55 and 5 per cent.; plow bolts, 55 and 5 per cent.; blank bolts, 55 and 5 per cent.; belt ends, 55 and 5 per cent.; sleigh shoe bolts, 70 per cent.; coach screws, cone point, 70 per cent.; nuts, square, all sizes 4c per lb off; nuts, hexagon, all sizes, 4 1-4c per lb off.

Washers, 45 per cent. off.

Screws—We again quote the following discounts: Round head bright, 82 1-2 per cent.; flat head bright, 87 1-2 per cent.; brass, round head, 75 per cent.; brass, flat head 80 per cent.

Shot—There is a small sorting trade. We quote: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb; chilled, Nos. 1 to 10, $7 per 100 lb; buck and seal, $7.50 per 100 lb; ball, $8 per 100 lb. Trade discount 17 1-2 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John N.B., and Halifax.

Cordage—Sash cord has been again advanced. Manila and sisal rope are firm at the recent advance. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; Russian tarred spunyarn, 13 1-2c; jute rope, 3-8-in in diameter and upwards, 9c; cotton rope, 20c; cotton twine 24c for 3 and 4 ply. Cotton bedcord, 90c to $1.70, according to length. Sash cord 30 to 31 1-2c; cotton candle wick, 22 to 24c.

Building Paper—We quote: Tarred felt, $1.85 per 100 lb; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry sheathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c per roll.

Cement—Trade is beginning to show some activity. Some heavy stocks of German cements were brought in last year before the imposition of the surtax. It is stated that on one at least of the principal German makes the Germans have advanced the price only 10 cents per barrel. We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel, ex store, and American, $2.20 to $2.40 ex cars.

Firebricks—Trade is showing some slight improvement. Quotations are English, $16 to $22 per 1,000; Scotch, $17 to $22.

PLUMBING GOODS.

Spring business is now in full swing. The Grand Trunk Railway is again taking goods for the West and several good orders have been received. Lead pipe and soil pipe and fittings are moving out briskly at unchanged prices. There is a good demand also for iron pipe.

Lead Pipe—This is going even better than last week. Composition sells for 8c and ordinary 7c. The discount is 35 per cent.

Soil Pipe and Fittings—Some nice orders have been received from Western houses, and trade is improving rapidly. We quote the discounts as follows: Light soil pipe, 3 to 6-in, 50 and 10 per cent.; medium and extra heavy soil pipe, 2 to 6-in. 60 per cent.; extra heavy soil pipe, 8-in, 45 per cent. Light fittings, 2 to 6-in, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-in, 60 and 5 per cent.; extra heavy fittings 8-in, 45 per cent.

Iron Pipe—Prices are unchanged. The market continues active. We quote: Standard pipe, per 100 feet, in length under 19 feet—black, 1-8-in, $2.30; 1-4-in, $2.30; 3-8-in, $2.55; 1-2-in, $2.85; 3-4-in, $3.65; 1-in, $5.20; 1 1-4-in, $7.35; 1 1-2-in, $8.95; 2-in, $12.55. Galvanized—1-4-in, $3.20; 3-8-in, $3.45;

Take time to read this issue of Hardware and Metal carefully; when you write advertisers remember that they desire to know where you saw their advertisement. Mention this paper.

1-2-in, $3.90; 3-4-in, $5; 1-in, $7.20; 1 1-4in, $10.05; 1 1-2-in, $12.20; 2-in, $16.85. In the above the discount on 1-8, 1-4 and 3-8 in black and 1-4 and 3-8 in galvanized is 12 1-2 per cent.; and on 1-2 to 2, inclusive, in black and galvanized is 15 per cent. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, 1-2-in, $4.20; 3-4-in, $5.25; 1-in, $7.55; 1 1-4-in, $10.55; 1 1-2-in, $12.75; 2-in, $17.60. Galvanized—1-2-in, $5.25; 3-4-in, $6.65; 1-in, $9.55; 1 1-4-in, $13.25; 1 1-2-in, $16; 2-in, $21.90. The discount on all sizes of extra heavy pipe is 12-12 per cent.

Solder—The price of wire solder is 18 1-2c, and of bar 18c.

METALS.

The blockade of freight at Buffalo has been broken, and Canadian houses are now receiving deliveries of their goods. In most lines the metal market is active, and in spite of the delay throughout the Winter months, many firms expect to see an exceptionally good season. The demand from country points is not large at present, but stocks for the most part have run very low and it is thought that merchants must require large quantities of goods. Prices have remained steady and unchanged during the week. Copper has been the most interesting feature, though there has been no change in the price. The tone of the copper market is, however, very firm, under a brisk demand, and it is quite probable that prices will be higher. Pig lead is also still firm, but the market is not active. Tin is again weaker, but the price is unchanged. There is a good movement in heavy goods.

Pig Iron—The market is firm. Prices are steady and will likely remain at the figure quoted below until the opening of navigation. The price of Summerlee is $20.25 to $20.75 per ton.

Bar Iron—There have been rumors of a further decline in the market but the manufacturers state that they are maintaining the following prices: Merchants' bar, $1.75; horseshoe iron, $2; forged iron, $1.95.

Black Sheets—This market continues to improve, and a fairly good trade is doing. Prices are steady as follows: 28-gauge, $2.35; 26-gauge, $2.30; 22 to 24-gauge, $2.25; 19 to 20-gauge, $2.30, and 80 to 10-gauge, $2.40.

Steel—The market is quiet and steady. We quote: Sleighshoes, $1.90; tire, $1.95 to $2.10; spring, $2.75 to $2.95; toe calk, $2.55; machinery (iron finish), $2.45; square harrow, $2.45.

Tool Steel—There is some improvement in the demand, but the market is still far from active. We quote: Black Diamond, 8 to 9c; Sanderson's, 8 to 9c, according to the grade; Jessop's, 13c; Jonas & Colver's, 10 to 20c; "Air Hardening," 65c per lb; Conqueror, 7 1-4c.

Sheet Zinc—Trade continues fair. The price in cask lots is $6.15 to $6.25. In smaller quantities $6.50 is charged.

Galvanized Iron—There is a good demand for delivery after navigation opens. Quotations are as follows: 28-gauge, Queen's Head, $4.30; Gorbal's "Best Best," $4.30; Apollo, 10 3-4 oz, $4.30; Fleur-de-Lis, $4; Comet, $4; Bell brand, $4. In less than case lots 25c extra.

Tinplates—There has been no change in prices. We quote: Cokes, $3.75; charcoals, $4.

Terne Plates—The price is not now being shaded. Ternes for shipment at the opening of navigation are quoted slightly less. The present quotation is $6.75.

Ingot tin—This has again weakened, but not sufficiently to change the price on this market, which remains at 32 to 32 1-2 for small lots.

Ingot Copper—Should the present good demand for ingot copper continue there is likely to be some scarcity. The market is now very firm, and prices are expected to go higher. We quote: 13 3-4 to 14c per lb.

Antimony—The market is firm at 8c per lb.

Coil Chains—Deliveries of chain which was held at Buffalo are now being made. We quote: No. 6, 10c; No. 5, 9c; No.

MIDLAND, ONT. Limited

4, 8 1-2c; No. 3, 7c; 1-4-in, $6.10; 5-16-in, $4.70; 3-8-in, $4; 7-16-in, $3.80; 1-2-in, $3.70; 9-16-in, $3.55; 5-8-in, $3.35; 3-4-in, $3.30; 7-8-in, $3.25; and 1-in, $3.20 with 10c allowance on carlots.

Canada Plates—These continue firm both here and in England. There is no quotable change, and prices are: 52s, $2.30; 60s, $2.40; 75s, $2.55; full polished, $3.60 and galvanized, $4 to $4.10; galvanized 60s, $4.25 to $4.35.

Pig Lead—This is still quite firm, though as yet no advance has been made here. We still quote $3.30 to $3.45, according to quality.

Zinc Spelter—The price is 6c.

Scrap Metals—The market has been quiet. Copper has advanced 1-2c per lb, and is firm at 10 1-2 to 11c. Old rubbers are weaker slightly. We quote: Heavy copper and wire, 10 1-2 to 11c per lb; light copper, 10c; heavy red brass, 10 to 10 1-4c; heavy yellow brass, 8 1-2c; light brass, 5 1-2c; lead, 2 1-2c; zinc, 2 3-4 to 3c; iron, No. 1 wrought, $10 to $12; machinery scrap, $14 to $15; stove plate, $12; mixed country rags, 65 to 75c per 100 lbs; old rubbers 6c per lb.

HIDES.

Prices in hides remain the same. There are plenty of receipts but the quality is not considered of the finest. We quote as follows:

No. 1 beef hides	0 08 0 08½
No. 2 "	0 07 0 07½
No. 3 "	0 06 0 06½
Lambskins	0 75
No 1 calfskins	0 11

Toronto, March 19, 1904.

Hardware.

AFTER the most severe Winter, both as to amount of snow and degree of cold, and after one of the most exasperating Winter seasons for both wholesale and retail hardware the Spring trade may be said to have opened this week. The railways are now taking freight to all parts of Ontario and in addition to the orders which came in weeks ago for delivery in March the wholesale trade are now getting orders for immediate delivery from every district. Outdoor work of all kinds has been prevented by the severe weather and while much of this will probably not be done in the Spring a great deal of it will be necessary. This, in addition to usual Spring trade, should keep the trade busy for weeks; in fact it seems reasonable to expect a continuance of activity up to next Fall. All Spring lines, such as fencing, builders' hardware, rails, etc., are moving in large quantities, while a fair number of orders are received for Summer lines, such as screen doors, lawn mowers, etc. The past Winter has been one of the poorest in the history of the trade in horsenails. In bolts, nuts, rivets and burrs the freight blockade has been particularly irritating and from the first of March to date jobbing houses report trade in

Latest Report on B.K. Morton & Co.'s

"B C" DRILL STEEL

From LE ROI MINING Co., Limited
ROSSLAND, B. C.,
Rossland, Sept. 7, 1903.

Messrs. B. K. MORTON & CO.,
Gentlemen:—

I have great pleasure in stating that your "B C" DRILL STEEL has been in use in this mine for about one year, and has given entire satisfaction. In competition with American brands of steel it has more than held its own

OPEN HEARTH STEEL

these lines exceedingly active. Prices are steady throughout. In lathyarn our prices last week were 1-2c, the correction being made this week. No changes are reported by the wholesale houses.

Lawn Mowers—Business is opening up nicely, prices continuing steady at the following basis of prices: Woodyat, 10 1-2 inch wheel, $8.50; Star, 9 inch, $7; Daisy, 8 inch, $5.75; Philadelphia, 7 1-2 inch, $7; Ontario, 7 1-2 inch, $15.80; King Edward, 12 inch, $9.50 (14-inch cut in above). D. Maxwell & Sons, 10 1-2 inch, $7.50 to $10; 9 inch, $5.50 to $6.25; 8 inch, $4.90 to $5.50. Discount 50 per cent.

Screen Doors—Prices are somewhat uncertain as manufacturers have been unable to get together and some cutting is reported. We quote as follows per dozen: Commont, two or three panel, walnut, 4 inch, $6.50; yellow and green stained, $6.75; in natural colors oil finish, $8.75, with 20c less for 3-inch style.

Screen Wire Cloth—Prices are steady at $1.50.

Spring Hinges—An improved trade is reported with prices steady as follows: No. 5, $17.25 per gross; No. 10, $18 per gross; No. 20, $10.50; No. 120, $20; No. 51, $9.25; No. 50, $27.50.

Galvanized Wire—A larger volume of business is reported. We quote: No. 5, $3.65; Nos. 6, 7 and 8, $3.10; No. 9, $2.45; No. 10, $3.15; No. 11, $3.20; No. 12, $2.60; No. 13, $2.70; No. 14, $3.70. In carlots f.o.b. Cleveland, No. 5, $2.15; Nos. 6, 7, 8 and 9, $2.10; No. 10, $2.15; No. 11, $2.20; No. 12, $2.25; No. 13, $2.35; No. 14, $2.45. In less than carlots, 12 1-2c per 100 lbs extra charged.

Barb Wire—Trade is moving briskly. Our quotations are again as follows: $2.75 per 100 lbs f.o.b. Toronto, and $2.50 f.o.b. Cleveland. Carlots of 15 tons, $2.40 f.o.b. Cleveland.

Coiled Spring Wire—The market is steady. We quote the following prices: No. 9, $2.70 per 100 lbs, freights equalized with factory points at Montreal, Hamilton, London, Welland or Walkerville and allowance to other points up to 25c; carlots, $2.65, freight allowance to 20c.

Wire Nails—A good trade is now reported with prices unchanged at $2.45 per keg f.o.b. Toronto, with carlots $2.40.

Cut Nails—A United States exchange comments that lower cost of cut nails as compared with wire nails has stiffened business in cut nails greatly. It is interesting to note, therefore, that no such influence is noted here, the relative demand for cut nails being unchanged. Prices are now steady at $2.30 per keg f.o.b. Toronto and Hamilton.

Horseshoes—A fair movement is recorded. Prices show no change. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow pattern, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c less.

Horsenails—The market is still quiet. We still quote discounts as follows: "C" brand, 40, 10 and 7 1-2 per cent.; other brands, 55 to 57 1-2 per cent.

Screws—A fair trade is doing. Prices are steady. We quote as follows: Flat head bright, 87 1-2 per cent. discount; round head bright, 82 1-2 per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

Rivets and Burrs—Prices are firm but there is no change. A big business for this season has been done during the last three weeks. We again quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

Bolts and Nuts—A good run of orders at firm prices is reported. Prices are steady: Carriage bolts, common $1 list), 3-16 and 1-4-inch, 60 per cent.; 5-16 and 3-8-inch, 55 and 5 per cent.; 7-16 and up, 55 per cent.; carriage bolts, full square ($2.40 list), 60 per cent.; carriage bolts, Norway iron ($3 list), 60 per cent.; machine bolts, 3-8 and less, 60 per cent.; 7-16 and up, 55 and 5 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

Cordage—A fair movement continues with prices steady. We quote: Pure manila, 15c; British pure manila, 12 1-2c; sisal, 12c; double lathyarn, 11c; single lathyarn, 10 1-2c; double shingleyarn, 11c; single shingleyarn, 10 1-2c; sashcord 'Hercules,' 30 to 33c; 'Star,' 36 to 38c; cotton rope, 3-16-inch and up, 20 1-2 to 22c; 5 32-inch, 25 to 27c; 1-8-inch, 25 to 28c; cotton twine, 3-ply, 23 to 24c; 4-ply, 27 1-2 to 28c; calking cotton, 16c; cotton waste, colored, 6 3-4c; white 10 to 12c.

Woodenware—A fair trade is doing at steady prices. We quote as follows per dozen: Washboards, Victor, $1.35; Crown, $1.45; Improved Globe, $1.60; Standard Globe, $1.70; Original solid Globe, $2; Superior Solid Back Globe, $2.15; Jubilee, $2.10; Pony, 95c; Diamond King (glass), $3.10. Tubs, No. 0, $10.50; No. 1, $8.50; No. 2, $7.50; No. 3, $6.50. Pails No. 1, 2 hoops, $1.75 and 3 hoops, $1.90. Matches, Sure Light, parlor, 500s, $3.50; Flashlight, parlor, 1,000s $5.75; Kodak sulphur, 65s, $3.80.

Building Paper—Orders continue liberal and a more regular delivery is furnished by the railroads. Prices are steady. We again quote the following prices: Tarred felt, $1.85 per 100 lbs; 2-ply ready roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb; dry seathing, 40c per roll; tar sheathing, 50c per roll; dry fibre, 55c per roll; tarred fibre, 65c per roll; O.K. and I.X.L., 70c per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 60c per roll.

Cement—Business on the books is increasing and as freight is now moving freely a larger business is reported. We quote small quantities: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

Firebricks—Firebricks are quiet this week, but will find a ready sale as soon as the weather opens up. We quote English and Scotch, each, at 28 to 35c.

PLUMBING GOODS.

The plumbing supply houses, while they have been kept fairly busy all Winter by the activity in the city, welcome the approach of Spring and the beginning of Spring trade with the same pleasure noted in other lines. Orders are coming in more freely from all quarters; consequently the market is steadier and prices more stable. No changes are reported.

Lead Pipe—A fairly good movement is recorded. We quote: Lead, 7c; lead waste pipe, 8c; discount 35 per cent.

Soil Pipe and Fittings—A moderate trade is reported at steady prices. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8-inch pipe 40 and 5 per cent.

Iron Pipe Fittings—Business in this line continues to improve. We quote: Malleable fittings, 15 per cent.; cast iron (standard), 57 1-2 per cent.; headers (not standard), 52 1-2 per cent.; flanged unions, 52 1-2 per cent.; bushings and plugs, 57 1-2 per cent.; nipples up to 2-inches, 65 per cent.; 2 1-2 to 6-inch, inclusive, 60 per cent.

Copper Range Boilers—Trade in copper range boilers continues fair. Discounts at 15 per cent. continue.

Brass Goods—Trade is improving in brass goods. Valves and steam specialties are moving particularly well.

Iron Pipe—A good volume of trade is recorded. Prices show no change. We quote f.o.b. Toronto: 1-8-inch, $2.93; 1-4-inch, $2.07; 3-8-inch, $2.27; 1-2-inch, $2.51; 3-4-inch, $3.22; 1-inch, $4.58; 1 1-4-inch, $6.47; 1 1-2-inch, $7.88; 2-inch, $11.05; 2 1-2-inch, $19.25; 3-inch, $22.75; 3 1-2-inch, $28.75; 4-inch, $35.25.

METALS.

A noticeably brighter tone has been imparted to the metal market this week, many influences combining to improve the situation. The local iron market has been greatly strengthened by the action of United States pig iron producers in making an advance of 50 to 75c a ton and by the slight advance in the British market. Canadian foundrymen have been buying only from hand to mouth yet stocks of foundry iron are comparatively light. No there is a disposition on the part of foundrymen to get into the market, so there is likely to be an advance about equivalent to that made in the United States. In tin the last week's fluctuations have netted an advance of 20c per cwt. at New York

and of £2 9s 6d in London. Tin is admittedly at a high level but is firm at the quotations. Copper has also strengthened during the week, a slight advance being shown at both New York and London. This metal, as are in fact all metals with the possible exception of tin, is recognized as being at a normal price, a basis well justified by prevailing conditions of supply and demand. It is not anticipated that there will be any change for some time, but it is agreed that present indications would point to an advance as the first change.

Pig Iron—Advices from the United States announce an advance of 50 to 75c a ton on foundry iron at all the chief centres of production. Heavy buying has strengthened the situation and as it has been pointed out that the consumption is still increasing at a remarkable rate, a strong market is expected there from now onwards. This condition of affairs in the States will mean much to Canadian prices as buying has been slow and the smelters here have been keeping their output well sold up at close prices, with the result that they will now be able to stiffen their prices materially. Quotations have ranged from $18.50 to $19 for No. 1 and $18 to $18.50 for No. 2 f.o.b. Toronto; Midland $1.50 lower.

Bar Iron—For some time iron and steel bars have been tseadily strengthening at Pittsburg, last week showing another advance of 5c per 100 lb. Consequently the local market is much stronger and whereas last week some quotations of $1.75 were heard this week prices are steady at $1.80 f.o.b. Toronto for extras as cut to length while rolling; 2 feet and over, 10c per 100 lb; 1 foot and under 2 feet, 15c; under 1 foot, 20c; over 20 feet by special agreement according to length and size.

Black sheets—An excellent demand is reported from stock while import orders for Summer delivery are coming in nicely. Prices are steady throughout. We quote as follows: 10 to 16 gauge, $2.50; 18 to 20 gauge, $2.70; 22 to 24 gauge, $2.90; 30 gauge, $3.

Canada Plates—Business in this line, while now of fairly large volume, has not up to date been as large as usual. Prices are unchanged, though firm. We quote as below: All dull, $2.50; half-polished, $2.60; and all-bright, $3.50.

Tin—There is a large trade doing and stocks are light. An advance of 20c per 100 lb is reported in pig tin at New York this week, bringing the price there to 28c per lb. There is now some hesitation as to the market there but the local market is stiff at last week's quotations, 30 to 30 1-2c.

Galvanized Sheets—There is an excellent demand. Prices are steady throughout. Our quotations are as follows: Queen's Head, $4.25 for 28 gauge; American, $.4 for 28 gauge; Bell brand, $4.25 for 28 guage; Gordon Crown, $4.25 for 28 guage.

Tinplates—Prices are steady. A larger business from stock than for some time is now reported. Import business is also satisfactory. We quote: Coke plates, bright, 14x20, $3.50; charcoal plates, $4.25.

Copper—While the market has been somewhat irregular at both New York and London the movement has been upwards to some extent. Locally there is considerable activity in both sheet and ingot and prices are steady. We quote: Ingot copper, $13.75, and sheet copper, $20 per 100 lbs.

Brass—There is a fair trade, with the discount steady at 15 per cent.

Lead—A good demand for English lead is reported. Canadian lead is also in fair demand. Prices are steady. We quote $3.30 per 100 lb for pig lead and $3.65 for bar lead.

Zinc Spelter—A fair demand at 6 to 6 1-2c per lb.

Zinc Sheets—The market is firm and a fair business doing in small lots. We quote: Cask lots, $6.70 to $7, and part casks $7 to $7.25.

Solder—Good trade doing. Prices are still stiffening. We quote: Guaranteed half-and-half at 18c, and wiping 17c.

Antimony—8c per lb.

Old Material—Trade is slow in old material this week. The country is pretty well closed up to transportation yet so that the supply is limited. We quote no changes in prices this week. The prices are as follows: Heavy copper and wire, 10 1-2c per pound; light copper, 9c per pound; heavy red brass, 9 1-2c per lb; heavy yellow brass, 8 to 8 1-4c per lb; light brass 5 to 5 1-2c per lb; lead, $2.35 per cwt; scrap zinc, 3c per lb; iron, No. 1 wrought, $10.50; No. 2 wrought, $4; machinery cast scrap, $13 to $14; stoveplate, $10; malleable and steel, $4; old rubbers, 5 1-2 to 6c per lb; country mixed rags, 50c per 100 lb.

PETROLEUM.

The market is a shade easier and prices are down 1-2c per gallon below last week's quotations. The present figures are: Canadian prime white, 19c; Canadian water white, 20c; American prime white, 19 1-2c; American water white, 21 1-2c, ex-warehouse.

CEMENT.

Railways are taking freight pretty freely now, and with a brisk demand, makes business pretty good. The prices are the same as those quoted last week. We quote: Canadian Portland, $1.90 to $2.25; American Portland, $2 to $2.10 f.o.b. Toronto.

Hides, Skins and Wool.

Trade in these lines continues fair. No changes in prices are noted. We quote as follows:

——

BUSINESS CONDITIONS IN BRITISH COLUMBIA.

By Regular Correspondent of HARDWARE AND METAL.

Vancouver, March 12, 1904.

THE White Pass Railway has announced the basis of Summer tariffs which will be published jointly by the railway and the Alaska Steamship Association on April 15. This is the same time as last year. M. J. B. White, traffic manager of the railway, and A. B. Newall, general manager, made the announcement when they arrived in the city yesterday. The rates are not much different from last year, but details will not be given out till the tariffs are published. The steamship lines running from Puget Sound ports and the Canadian Pacific Railway Steamship line are the principal parties with the White Pass in arranging the rates, as the White Pass controls the traffic on the Yukon practically, as they have the largest fleet of steamers.

The only real difference in the tariff is the arrangement of a special commodity rate for merchandise shipped between July 1 and August 15. This is made lower than the current Summer tariff in order to get merchants to order their Winter stocks and rush them forward early. Last year there was such a congestion of freight at White Horse that the freeze-up came before the steamers could all get down the river. Not only was there direct loss to goods in transit, but there was a big pile of stock hung up at White Horse all Winter. To avoid this the transportation company is making special inducements for the betterment of the service.

* * *

That is all very well from the point of view of the transportation company. But it is worth hearing from the wholesalers who do business with the northern houses. They have always claimed that they are badly handicapped in their efforts to get goods north because the eastern manufacturers and the railway companies between them hold back western orders too long. In this correspondence, this matter has been referred to before. Instances can be given where merchants here who expected to sell goods in the north stocked up with that in view and they did not get the goods delivered in time. Not only did they not get them in time to sell before the short northern season was over, but they had to carry over their stocks as they were in many cases for northern trade only. This may be a hard blow to eastern manufacturers. But there is something in it because the

experience here has been so general. There is the feeling here that the manufacturers attend to the bigger orders received from nearer home, without stopping to think of the way it may affect the business of the trade out here, where there are so many special conditions. The northern trade has been very badly handicapped in this very particular.

* * *

This week hardware merchants and others are receiving stocks of heavy goods from the Old Country direct. The China Mutual steamer "Ping Suey" is in port after having discharged her cargo at Victoria. She has several hundred tons for this port. The British ship "Hougomont" is discharging cargo at Victoria, where she arrived on the 9th and is due to come on here in a few days, with a large amount of general cargo for local dealers. Among the principal items are cement, firebricks, fireclay, steel rails for mining, bar iron steel, steel sheets, corrugated and plain galvanized sheets, chain, wire rope, glass and similar lines. Pig iron is always an item of the cargoes received from the English manufacturers.

* * *

Following is a partial list of some items on which local quotations may be of special interest. The items included are entirely of goods which have been imported direct from the British markets and are, therefore, on a basis of water freights only, not having paid any railroad freights. The quotations given are all ex-wharf, and mainly for quantities, not in small orders. In one or two instances, such as light steel rails, there has been some cutting of late.

Steel rails, 8, 10, 12 lb., short ton	$50 00
White pig iron, short ton	25 00
Eglinton pig iron, No. 1, long ton	22 50

TRADE CONDITIONS IN NOVA SCOTIA.

By Regular Correspondent of HARDWARE AND METAL.

Halifax, Mar. 15, '04.

THE weather has become a little more Spring like. Wheels are again in evidence on the city streets and very shortly vessels from the shore ports will be at the wharves taking aboard cargoes for the merchants along the Atlantic seaboard. Some very good orders are being booked for early shipment at the opening of navigation and our business houses are beginning to assume a more active air. In this connection it may be noted that the Bunel- N.S., has just closed a contract for the Johnson Iron Company, of Yarmouth, construction and equipment of a new steamer to take the place of the "Wilfred C" plying between Halifax and eastern shore ports. This with the new steamer "Strathcona" on the same route will give merchants to the east of Halifax a fairly satisfactory freight and passenger service. The new steamer "Senlac" on the western shore is now rendering satisfactory service so far as the larger business centres are concerned.

* * *

The advance in cordage, the firmer position of turpentine and the changes in lists and discounts by Canadian manufacturers of builders' hardware represent the market changes of the last two weeks. The advance in cordage will hit our Nova Scotia fishermen heavily, for during the next six weeks they will be buying their outfits for the Spring fishery in which rope and cotton lines figure largely.

* * *

A meeting of the Axe manufacturers of the Maritime Provinces was held last week at St. John for the purpose of considering the best steps to be taken to prevent the dumping of American axes upon this market. The duty on these is levied on the ad velorem principle and it is claimed that United States makers have been invoicing axes to their Canadian agents at about one half the price of like grades of Canadian make and paying duty on that basis. If this actually represents the price at which these axes are being sold to the trade it is maintained that the Canadian manufacturer has little chance in the competition. A proposal was submitted that each manufacturer should enter into an agreement to pay the Americans 40 cents per dozen on the output of his factory in consideration of which the Americans would withdraw from the Canadian market. None of the Maritime Province manufacturers would agree to this and it was decided to press for a readjustment of the tariff and the imposition of a specific as well as an ad valorem duty.

* * *

In order to demonstrate the fitness of the Dominion Iron and Steel Co.'s product for the manufacture of rails a quantity of steel some time ago was sent to England and made into standard 80-pound rails. These are now ready for shipment and are to be placed at different points along the Intercolonial Railway and given a thorough testing. The Government is calling for tenders for the erection of car repair shops at Sydney, which are to be the largest on the I.C.R. outside of Moncton.

* * *

J. H. Whitman, of Port Dufferin, N.S., in association with United States parties, is seeking incorporation as a branch of the Victoria Manufacturing Co., of Auburn, Maine, for the purpose of establishing a factory at St. John for the manufacture of acetylene gas generators.

* * *

The destruction of the Maritime Nail Works at St. John by fire a few days ago is a very regrettable incident, as the products of the company was largely handled by the eastern trade. The building, plant and stock were valued at $70,000 and the insurance was only $20,500. It is not certain that the works will be rebuilt as there was a

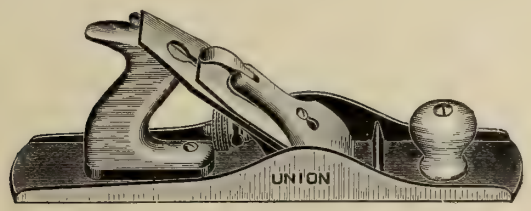
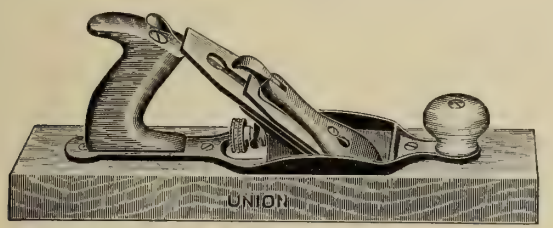
Plane Facts for 1904



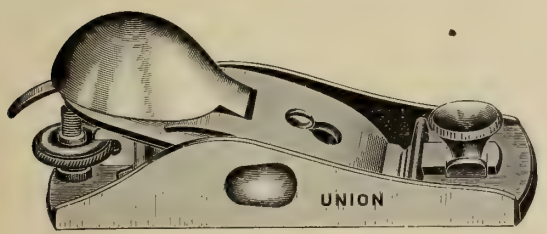
UNION No. 5. Iron Jack Plane

CUTTERS

The Cutters used in Union Planes are made of best stock, and are guaranteed. They are made extra heavy, and of one piece, and will not chatter in the hardest woods. This is a decided advantage over the cutters used in other makes.



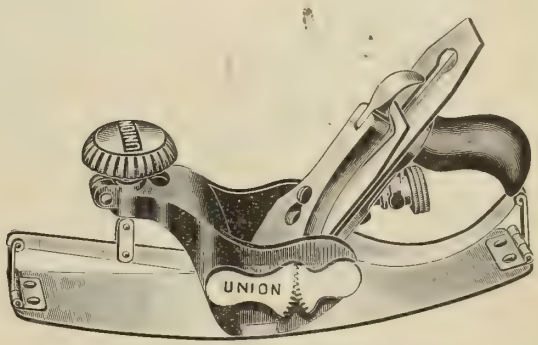
UNION No. 26 Wood Jack Plane



UNION No. 138. Knuckle Joint Block Plane

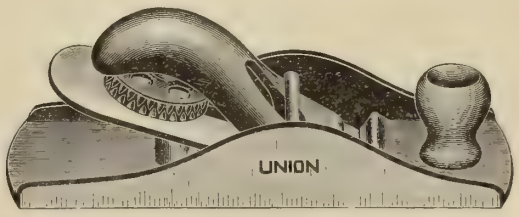
UNION PLANES

are guaranteed to be right. We are constantly adding to our line, and shall aim to make a complete line of these Tools.



UNION No. 311. Circular Plane

All of our Planes are well made and finely finished. All materials used are of the best. We also make a full line of Block Planes, Spoke Shaves, etc. Also the Union Adjustable Scraper. Send for new Catalogue.



UNION No. 110. Block Plane

Sold by the leading Jobbers in Canada.

Whiplashes

Oldest lash factory in Canada. Established by the late John F. Scholz in the year 1860, and still doing business under the same name. Tanner and manufacturer of whiplashes, stock whips, drop tops, and all kinds of plaited leather work. We manufacture the only **genuine** Buckskin lash made in Canada. Our firm introduced and now make the best yellow horsehide or cordovan lashes, offered for sale everywhere. Samples in four, six and eight plait lashes, made from yellow cordovan, white horsehide and buckskin, will be sent to any wholesale dealer and jobber who requests them.

NEW WOODENWARE PRICES.

The United Factories, manufacturers of woodenware, brushes, brooms, etc., are notifying the trade of an advance of 10 per cent. in tubs and pails. The new prices now are: Tubs 0, $11.55; tubs 1, $9.35; tubs 2, $8.25; tubs 3, $7.15; pails 2-hoop, $1.92; pails, 3-hoop, $2.10.

The cause of the advance is the high price of lumber which is due to the difficulty of getting it from the woods to the mills.

WROUGHT STEEL REGISTERS.

THE Hart & Cooley Co., of New Britain, Conn., U.S.A., are making a full line of wrought steel registers for floor and side wall use in sizes from 4x6 to 24x42 in the following finishes: Electro plated bronze, brass and copper of all kinds; black or white japan, nickel plated, white porcelain enamel, bronze paint, gold, silver or copper bronze paint.

Each register is packed in a strawboard box, thereby avoiding shop worn goods and they claim that the "H. & C." wrought steel registers are much stronger than cast iron and guaranteed against breaking; they are about one-third the weight of cast iron and will fit all standard makes of cast iron borders. This firm call special attention to their new side wall registers which has had an enormous sale in the United States. This side wall register presents a perfect operating device—unusually large air space—and a handsome apearance derived from the finely rounded fretwork of the face plate.

One of the strong features of this line of registers is the fact that they are so much lighter than cast iron; that there is a large saving in freight and they are so strong that there are no broken parts to be replaced when the goods are unpacked. Catalogue containing full information mailed on application.

IRON AND STEEL HOCKEY LEAGUE

THE final struggle to decide the hotly contested championship of the Iron and Steel Hockey League, of Montreal, took place on the afternoon of Saturday, March 12th, at the Arena rink. It will be remembered that by their win from Thos. Robertson & Co. in the last scheduled game of the series, the James Robertson Co. team managed to tie with the former team for first place.

The final standing of the league is therefore as follows:

	Won	Lost
Thos. Robertson & Co.	6	1
Jas Robertson Co.	5	2
Williams & Wilson	1	5
Drummond McCall & Co.	1	5

ELECTRICAL GOODS.

ONE of the strongest firms engaged in the wholesale electrical supply business is that of John Forman, Montreal. Mr. Forman has been established in the business for ten years and many hardware men who are handling electrical goods are well acquainted with his up-to-date business methods. His business has grown steadily and he has now one of the largest jobbing trades in electrical goods in Canada. Four travellers cover Canada from coast to coast.

Long ago Mr. Forman recognized the great field for hardwaremen who handle electrical goods and he has had prepared a special catalogue for the hardware trade illustrating and describing such lines as are suitable for the hardware trade. Hardware and Metal has often urged hardwaremen to handle new lines and there is none more profitable than electrical supplies. Hardware men should send for this catalogue.

WON THE CHAMPIONSHIP.

The James Morrison Brass Co., Toronto, wholesale dealers in plumbing and electrical supplies, have, after a brilliant season in hockey, landed the championship of the "Queen City" League, by defeating the R. S. Williams team by a good margin. The league standing was as below:

	Won.	Lost.
Jas. Morrison Brass Co.	7	1
R. S. Williams Piano Co.	6	2
Western Assurance Co.	4	4
Eby, Blain Co.	2	6
Manufacturers' Life	2	6

CURRENT MARKET QUOTATIONS.

March 18, 1904.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.
